The London Teachers' Association has issued a pamphlet of ten pages setting forth the case in support of improved salaries. The arguments are addressed primarily to the Chairman and Members of the London County Council, who are told that "the welfare of education is closely bound up with settled conditions in the teaching service." Despite its local purpose the pamphlet will serve wider ends if only it is read, as it should be, by the public at large. Thus it is stated that the salary of an assistant master entering upon work in a London primary school is 46s. a week for the first three years of service, while that of an assistant mistress is 41s. 6d. a week, in both cases excluding the war bonus. In secondary schools, where University men and women are required, the payments are 57s. 6d. a week and 46s. a week. These are new rates of pay, superseding others which were even more unsatisfactory. They are apparently designed to meet the new conditions caused by the war, but a mere record of the amount shows that for any such purpose they are utterly inadequate. The inadequacy is the more striking because of the fact that the scale applies in its full generosity to new teachers only. For those already in the service it is apparently necessary to provide carefully against any sudden accession of wealth. To avoid this peril there is a scheme called the "carry over," by which a lengthy period is made to intervene before existing teachers reach the higher rungs of the scale ladder. This practice has a double disadvantage for the teacher. It involves a financial hardship, but what is worse, it alienates the sympathy of the general public. The ordinary ratepayer sees the new scale and fondly believes that all the teachers are working under it. He does not understand that the scale is prophetic and not actual. It is necessary to make this clear, and the London Teachers' Association has performed a useful service in drawing up this pamphlet, and especially in urging that existing teachers, primary and secondary, should be placed on the new scale at the point which they would have reached if the new scale had been in existence during the whole of their service.

### Miss Cleghorn on Conditions of Work.

At the recent Conference of the National Association of Head Teachers, Miss Cleghorn, an ex-President of the N.U.T., and a member of the Teachers Registration Council, submitted a motion putting on record the opinion that the shortage of teachers "is due not only to inadequate salaries, but also to the unsatisfactory conditions of service with regard to the accommodation for, and comfort and well-being of, the teachers, and to the large classes which exist in the primary schools." It was necessary, Miss Cleghorn agreed, that 50,000 teachers should enter the profession within the next five years. The present dearth was a preventable disease. There was no dearth of teachers in Birmingham. It was not only that Birmingham teachers had a good scale of salaries, but there was a perfect feeling of sympathy between the local education authority and the teachers. She did not see why other authorities should not put themselves into the same position. Improvements in conditions of work were wanted. They wanted better staffing. They had schools which were insanitary, noisy, crowded, and with everything which went to break down the health of the teacher. It was impossible for teachers to do good work with a class of sixty children. Teachers wanted less worry in the schools, and a better status. The registration of teachers would bring that about; and yet, out of the elementary school teachers who were eligible, only 10 per cent. were registered. "Good salaries are coming," Miss Cleghorn concluded in a sanguine key, "pensions have come, and better conditions and status will come if teachers work for them."

## PERSONAL NOTES.

**Sir Henry Hadow.**

Sir Henry Hadow, Principal of Armstrong College, Newcastle, and Director of Education to British Soldiers in France, is to become Vice-Chancellor of Sheffield University.

**The Rev. Dr. R. W. M. Pope.**

Oxford men, especially those connected with the non-collegiate body and with Worcester College, will hear with regret of the resignation by the Rev. R. W. M. Pope, D.D., of the post of Censor of Non-Collegiate Students, to which he was appointed in 1887, in succession to the Rev. W. W. Jackson, who had become Rector of Exeter College. Dr. Pope has recently passed his 70th year.

**The Rev. H. Costley-White.**

The Rev. H. Costley-White, Headmaster of Liverpool College, has been elected Headmaster of Westminster School, in succession to the Rev. Dr. Gow, who retires at the end of the present term. The new Headmaster, who has been Principal of Liverpool College since 1917, is 41 years of age. He was educated at Malvern College and Balliol College, Oxford, where he took a first in Classical Moderations. He was ordained in 1902, and, after holding posts as assistant master at Sherborne and Rugby, he became Headmaster of Bradfield College in 1910. He is the joint author of five volumes on Old Testament history.

**Sir James Campbell.**

The Lord Chancellor of Ireland, Sir James Campbell, has been appointed to the position of Vice-Chancellor of Dublin University, rendered vacant by Archbishop Bernard's resignation on his appointment as Provost.

Sir James Campbell is a distinguished graduate of the University, where he took a classical scholarship in 1872 and senior moderatorships in classics and history in 1874.

**Professor G. H. Bryan.**

The Industrial Research Committee have asked the authorities of the University College of North Wales, Bangor, to extend for another year the leave of absence granted to Professor Bryan, professor of mathematics, in order that he may continue the research work in the theory of aeroplanes which he has been conducting for the Government. The request has been granted.

**Professor Adrian J. Brown, F.R.S.**

We record with very great regret the death of Professor Adrian J. Brown, F.R.S., who has been the Professor of the Chemistry of Brewing and Fermentation in the University of Birmingham ever since the chair was established, nearly twenty years ago. Professor Brown was greatly esteemed by his colleagues and pupils by reason of his unflinching kindness and genial disposition. His scientific attainments were of no mean order, his work on the certain phenomena of fermentation in wheat being recognised by election to the Royal Society.

**Lord Rayleigh.**

We regret to announce the death of Lord Rayleigh, which occurred on July 1. From the days when he left Trinity College, Cambridge, with the honours of Senior Wrangler and Smith's Prizeman, he has been winning distinction in science. He was made a Fellow of the Royal Society in 1873, at the age of 31, and was Secretary to the Society from 1879 to 1884. In 1888 he began a fresh investigation to determine the physical properties of gases. This led to the discovery of argon, a constituent of the atmosphere hitherto unknown, and the discovery is an example of his success in opening new paths to subsequent workers. Lord Rayleigh was also a business man of proved shrewdness and acumen, his farms in Essex being profitably linked up with his retail shops in London.

## NEWS ITEMS.

**Juvenile Workers' High Wages.**

A report presented to the Juvenile Employment Subcommittee of the Oldham Education Committee gives illustrations of the high wages now paid to young people in the borough. Cop-packers of 17, 16, and 15 years were paid 85s., 75s., and 60s. to 64s. per week; a firebeater (16 years), 82s. 6d.; a cotton feeder (16), 59s. 3d.; big piecers of 17, 15, 14, and 13 years were paid 58s., 56s., 47s., and 35s. to 43s. Two girls, one 17 and the other 16 years, obtained 52s. as a big piecer and 50s. as a cop-packer respectively.

**The Newdigate Prize.**

The Sir Roger Newdigate Prize for English verse, the subject of which was "France," has been awarded to Percy H. B. Lyon, exhibitor of Oriel College. The poem sent in by George H. Johnstone (Merton College) is highly commended.

**Rugby Master and the National Anthem.**

The Rev. A. S. Le Mare has been officially asked to resign his position as an assistant master at Rugby Lower School because he sat down during the singing of the National Anthem at the ordinary school session on the King's Birthday. Mr. Le Mare is a prominent member of the Rugby I.L.P.

**Teachers' Holiday Exhibitions.**

The Middlesex Education Committee have decided to offer 20 Holiday Exhibitions to teachers in Elementary Schools in the County, similar to those offered to teachers in Secondary Schools. These are intended for teachers who are desirous of attending a recognised course of study during the holidays.

Successful candidates will be awarded an Exhibition of a value not exceeding £2 per week (maximum £12), together with their actual travelling expenses, not exceeding £4.

At the close of the course Exhibitors will be required to submit to the Education Committee an account of the course of study followed.

**Reedham Orphanage, Purley.**

A large and distinguished gathering assembled at the Annual Summer Festival which was held in Reedham Orphanage Grounds on Saturday, the 28th June.

The Mayor of Croydon presided in the unavoidable absence of the Lord Mayor (Sir Horace Marshall).

Mr. H. Cosmo Bonsor, the Hon. Treasurer, and Sir Arthur Spurgeon, J.P., a member of the Board, emphasised the need for additional financial support in order that the children placed in their care might be given equal opportunity with those brought up under ordinary conditions. They were launching that day a special appeal to the public for £20,000 to be set aside as a Victory Extension and Improvements Fund, which was necessary in order to keep pace with modern development, more particularly on the educational side.

The Office of the Orphanage is at 34, Walbrook, E.C. 4, and the Secretary will gladly acknowledge any contributions to the Special Victory Fund.

**A Co-operative College.**

At the 51st Annual Co-operative Congress recently held in Carlisle a resolution was passed in favour of establishing a co-operative college, at a cost of £50,000, as a means of furthering the co-operative movement and realising a co-operative commonwealth.

## ASSOCIATION NEWS.

### The Teachers Council.

Up to and including the 2nd July the number of applicants for admission to the Register was 28,441. Of this number 9,224 are teachers in Secondary Schools, 3,510 are Specialist Teachers, and 15,255 are teachers in Elementary Schools. Of University teachers 246 are now registered, and 206 private teachers have applied. Applications to the number of 416 have been rejected. The number applying continues to show a gratifying increase, and of late it has averaged about 200 a week.

The Council has recently considered the position of specialist teachers of such subjects as Art, Domestic Science, Handwork, and Physical Training. It is a common practice to pay such teachers on a scale lower than that of ordinary class or form teachers. The Council has passed the following resolution:—

The Council is of opinion that specialist teachers who are registered under the conditions laid down by the Council should be placed on the scale of salary adopted for ordinary form teachers, and that those who have taken a four years' course of study and training in teaching in preparation for the special certificate or diploma should be recognised as eligible to rank as graduates for salary purposes.

### The College of Preceptors.

The commemoration dinner was held on Friday, June 20th. Sir Philip Magnus, President, gave an interesting sketch of the history of the College in a speech which will be found on another page.

At the meeting of the College Council, on Wednesday, June 25th, it was announced that several schools had applied for affiliation and the applications were referred for consideration.

Professor Adams was appointed to deliver a course of lectures on education during the autumn.

### The National Union of Scientific Workers.

This Society was founded about two years ago. Its members are Government workers, particularly in the Board of Agriculture and the Royal Aircraft factories, with municipal workers and scientists who are in private employment. The qualification for membership is, generally speaking, a University degree or its equivalent. The Union was represented at the conference on the application of the Whitley Report to Government industrial establishments. It was grouped as a "miscellaneous" section, which includes clerks, the Army Clothing Department, and the General Workers' Union. Dissatisfied with this, the scientific workers claim due representation on the Whitley Council. To strengthen this claim the Union is likely to seek federation with other workers of its own class, such as the chemists and technical engineers.

### The Navy League Essay Competition.

In order to encourage the scientific study of sea-power and its uses in war and peace time and to stimulate interest in the achievements of the Royal Navy and Mercantile Marine, the Navy League is offering prizes for essays on naval subjects. These include a gold medal and £100 offered for competition among University students in the British Isles, prizes of £20 and £10 for teachers, and smaller prizes for pupils in schools of different types. The rules and full instructions may be obtained from the General Secretary, The Navy League, 13, Victoria St., London, S.W.1

### Modern Language Research Association.

Mr. E. Allison Peers, hon. sec., writes from the Old Schoolhouse, Felsted, Essex:—With representatives from every University in the British Isles, this Association, founded for the promotion of advanced study and research in modern languages and literatures, including English, aims at improving means and methods, at co-ordinating isolated effort, and at uniting, both individually and by means of groups representing their interests, members interested in cognate subjects. It hopes to undertake collective work, projects for which are now being considered by the Committee, and, when funds permit, to publish freely and to found bursaries and travelling studentships. Its aims are not merely academic; they are essentially national and imperial. We appeal to all to join us as members or associates at the beginning of this second year of our activities. The Association has already correspondents in the principal centres. The minimum annual subscription is 7s. 6d., and a quarterly bulletin, containing valuable information, is issued gratuitously to all. I shall be pleased to give further specific information to any who may desire it.

### Association of Teachers in Technical Institutions.

Speaking at the annual conference of this Association, the President, Mr. E. L. Rhead, said the new Education Act was the first genuine attempt to produce a comprehensive, continuous, and correlated scheme of national education, with provisions that made its achievement possible. The benefit that would accrue would depend mainly on the spirit in which it was administered. The raising of the school age was a great step. The sanction of works schools had introduced a factor in provision and management the value of which for the good of education in its true sense remained to be proved; it was a question of administration. In the future they looked forward to a closer linking up of the university with industrial life.

### Russo-British 1917 Bratstvo (Fraternity).

The Educational Committee of the Russo-British (1917) Bratstvo (Fraternity) propose to inaugurate a Course of Commercial Emergency Lectures, to be delivered by British and Russian Experts during the months of July, August, and September, on the various branches of Russian Export and Import Trade and the technicalities of Russian business operations.

These lectures will be delivered in English, and are designed to afford those intending to start as commercial travellers and agents the means of acquiring an indispensable elementary knowledge of the conditions and particulars of business operations in Russia. The Chairman of the Committee is Professor P. Vinogradoff, and the office is at 26, Chester Square, S.W. 1.

### Empire Universities.

Representatives of Universities and other higher education institutions met representatives of the Dominions in conference at Australia House on the 11th and 12th June, for the discussion of educational problems which have presented themselves to the Imperial Education Committee of the War Office as a result of the experience gained in the working of the educational schemes within the British Army and the Forces of the Dominions. The subjects for conference included:—Function of an Imperial Education Bureau; Interchangeability of matriculation standards and credit for work done by students transferring from one university to another within the Empire; Education (and co-ordination of research) to meet specific, technical, commercial, and agricultural needs within the Empire.

### Mr. J. W. Dyson, M.A.

Mr. J. W. Dyson, M.A., for six years headmaster of Boston (Lincs.) Grammar School, has been appointed headmaster of Ripon Grammar School. He was formerly senior mathematical master and house master at Wellingborough Grammar School.

## NATIONAL ASSOCIATION OF HEAD TEACHERS.

### THE ANNUAL CONFERENCE.

(BY OUR OWN CORRESPONDENT).

IN delightful weather, and under conditions of much less anxiety and strain than have obtained during these last years of war, the twenty-second annual Conference of the National Association of Head Teachers was held in Birmingham on June 12th and 13th.

By the kindness of the authorities of the University, the large Medical Theatre was placed at the disposal of the delegates for their sessions; and for two days head teachers of both sexes, representing 7,000 members working in the primary schools of the country, met and discussed matters of serious moment, affecting not only themselves and their profession generally, but also the welfare of millions of children.

The beautiful blue sky outside and the clear invigorating air had their counterpart within the conference hall, for, from beginning to end, the atmosphere of the conference was refreshing—a mixture of relief, satisfaction, and optimism. Relief came from a knowledge that the war was over and peace in sight; satisfaction from the placing on the Statute Book of two great Acts with which the name of the Right Hon. H. A. L. Fisher will for ever be associated; and optimism from a firm belief that at last education was coming to be thought of seriously by the nation.

The welcome given to the delegates by representative citizens of Birmingham was alike warm and sincere. Sir George Kenrick, chairman of the Education Committee, the Bishop of Birmingham, Archbishop McIntyre, and Sir Oliver Lodge voiced that welcome in words appropriate and inspiring. In referring to the war, and in particular to the cause of victory, Sir Oliver's words were very impressive. He said "material things were instruments for speaking from mind to mind. It was mind, after all, which dominated the whole. They had seen in this war how in material things our enemies were far in advance of us. They had made preparations; they were better instructed in all manner of ways. They regarded what we had to send against them as contemptible. But the *material* side was overcome by the spirit and moral character and forces of humanity, which stood in the breach and prevented the material side from dominating the world. So he felt that in the wider opportunities they had now for getting at the minds and souls of children and young people, it was not the vocational instruction they would give, but it was on the higher side they would take every opportunity they had of developing in their students the perception of the universe in which they were, and the nature of the humanity they possessed."

After the deputation had withdrawn, the business proper commenced. Councillor H. R. Barge, J.P., inducted the new president, Mr. H. R. Morrell, of York, who delivered an address on "Education under the New Act."

He said that the solving of the problems offered in the plans for building a new England, which would satisfy the just demands of a higher and fuller life, would need the exercise of the same spirit of forbearance, self-sacrifice, and determination so nobly evidenced during the war. The instrument of primary importance to effect these reforms was education. The new Act provided for the setting up of new types of educational institutions—nursery, central, and day continuation schools. He then proceeded to deal with these schools seriatim, and to indicate the aims and the methods to be pursued in order fully to realise what the framer of the Act intended. The whole address was statesmanlike, sane, and sympathetic towards the Act, and voiced the opinion, which Conference endorsed, that all teachers were ready and willing to do their part towards making the operation of the Act a success. Moreover, the president struck a new line in that he did not find it necessary to reserve a special "tit-bit" in his speech for tilting at governments and local educational authorities on the evergreen topic of "salaries."

Several resolutions on nursery schools were adopted, the chief one being moved by Miss Lasham (London) advocating the putting into force forthwith of Section 19 of the Education Act 1918 (dealing with nursery schools), that where it was not done authorities should be required to provide accommodation for children between the ages of three and five, and that the superintendent and staff of the nursery school should be specially trained for the work.

On the employment of children of school age it was agreed that no children under 14 should work on school days,

that by-laws should severely curtail the 14 hours' daily labour allowed by the Act during holidays, and that reports on the effect of employment on health should be required from all school medical officers.

*New Officers.*—The President declared the following duly elected: Vice-president, Mr. C. F. Farthing (London); Treasurer Mr. W. C. Lane (Liverpool); Editor, Mr. E. S. Mortimer (London); Secretary, Mr. J. E. Doherty (Newcastle-on-Tyne).

The afternoon session was private, and delegates discussed reports and alteration of rules—the last being referred back.

On Thursday evening a dinner was given at the Grand Hotel, at which about 160 guests were present.

At Friday's session resolutions were carried which stated (a) that in the opinion of this Conference all local authorities should be required by the Board of Education to submit schemes for the supply and training of entrants to the profession, (b) that facilities should be provided to present uncertificated teachers to become trained certificated teachers, and a time limit fixed for the abolition of the acting teachers' certificate, (c) that special grants to encourage entrants should not be given before the age of 16 years.

Other resolutions carried were: That, while recognising the vital importance of adequate academic qualification covering the subjects required to be taught, all courses of instruction should include instruction in the principles and methods of teaching and a period of practical teaching under supervision, and that the higher posts in the education service should be open only to those men and women who have had successful teaching experience. Conference further urged that super-annuation schemes should be so framed as to secure free passage for teachers to and from the administrative service.

Miss Cleghorn, M.A., moved, and Mr. Jacob (Leeds) seconded, and it was carried, that in the opinion of this Conference the dearth of teachers was due not only to inadequate salaries, but also to the unsatisfactory conditions of service with regard to the accommodation for and comfort and well-being of the teachers, and to the large classes which exist in the primary schools.

The most interesting and exciting discussion of the whole Conference centred round the question of equal pay for men and women teachers.

Miss Bale (Cardiff), in an eloquent and well reasoned speech, moved that this Conference directs Council to initiate immediately a movement for the raising of the salaries of head mistresses to the level of those of head masters. This was seconded by Miss Byett, L.L.A. (Birmingham), who pleaded for equality of pay on the ground chiefly of equal citizenship. On account of time no decision was arrived at during the morning session, but a motion for suspension of Standing Orders early in the afternoon enabled delegates to discuss the matter later, when the men's point of view was cleverly and convincingly stated by Mr. Greaves (Leeds) and Mr. Brickhill (Manchester), who stated that equality of pay at the present juncture would give the women economic advantages and would deter the best men from entering the vocation of teaching. Several ladies and gentlemen participated in the debate with more or less heat, but all in good temper, but when the vote was taken by show of hands, the amendment moved by Mr. Greaves to the effect that this Conference, while urging the Council to take steps to secure better salaries for head teachers of both sexes, is of opinion that no scheme of salaries will attract men and women of equal social standing and ability which does not offer higher salaries to men than to women, was declared carried by 70 to 40.

The ladies, however, seemed highly pleased when, by an oversight due to his eagerness to get on with other important resolutions, the president omitted to put the amendment as the substantive resolution.

The less controversial business resulted in votes in favour of direct representation of teachers with full power on education committees; the setting up of Whitley Councils; reduction in the size of classes; the improvement in school buildings in the interest of teachers and pupils; and the making into separate departments for boys and girls of the present mixed schools of 600 and over.

In connection with the visit of the N.A.H.T. two very pleasing and successful functions were held—the reception of the delegates by the local Association, given on Wednesday evening in the Imperial Hotel, and the reception at the Council House, given by the Lord Mayor and Lady Mayoress, Sir David and Lady Brooks.

Excursions to Stratford-on-Avon and other places on the Saturday brought to a fitting conclusion an altogether pleasant and useful Conference.

## THE ASSOCIATION OF HEADMISTRESSES.

### ANNUAL CONFERENCE

THE 45th Annual Conference of the Association of Headmistresses took place at Birmingham on Friday and Saturday, June 13th and 14th, and was attended by some 260 members.

In her presidential address Miss Reta Oldham spoke of the growing recognition of education as one of the most potent agencies in the improvement of social conditions and the establishment of better relations among nations. There had grown up among working people a desire that their children should have a better life than they themselves had known—a life in which there should be opportunities of liberal education, of means of contact with the beautiful in nature and art, and leisure to use these means.

Mr. Fisher had spoken well of the duties of teachers when he said that they should be ready to give "a full measure of unstinted and zealous service on behalf of the children of the country," and, further, that societies and associations of teachers, for long forced by the apathy and coldness of the State to spend much of their energy on the redress of material grievances, should now be ready to devote themselves to the spiritual and intellectual aspects of their work. She doubted whether education was best served by a rigid severance between the work of administration and that of teaching. She hoped that in future closer relations would be encouraged between teaching and administration, and that there would be a strong representation of teachers on local education authorities and governing bodies. She urged that women should have a larger share in educational administration.

Secondary Education was changing in the direction of being more closely related to the actual problems of life, and it could do much to foster sympathy and understanding between different classes in the community. Since to many women fell the task of ordering the leisure of the family it was important that the arts should be prominent in the education of girls. Yet music and the fine arts were still relegated to a subordinate place in the curriculum, and educated men and women were often without discrimination in matters of art, and so were left unfitted to promote healthy and refining types of leisure pursuits.

She emphasised the need for a unification of the teaching profession by breaking down the barriers between its different branches. The Teachers Council had accomplished something to this end, but there remained the urgent need for increasing the supply of teachers, especially in elementary schools, and she suggested that the secondary schools ought to place before their pupils the value and importance of this form of social service. She held that the only barrier which ought to stand between one branch of teaching work and another was that of individual fitness for the work. They must not be over-occupied with matters of curriculum, organisation and administration, but must realise that the spirit is what gives life. "The pursuit of a great ideal gives an inextinguishable sense of the things which are unseen—dignity to service, inspiration to work, purpose to suffering, a value immeasurable and eternal to the humblest of human lives."

The Conference passed resolutions in favour of a National Council for Education, with representatives of the State, of whom the majority should be members of Parliament, representatives of education authorities and governing bodies, and representatives of teachers, these last to be equal in number to the first two groups and to consist of the chairman and members of the Teachers Council, with other teachers directly elected by members of the constituent associations in the same proportions as the members of the Teachers Council.

Other resolutions were passed in favour of providing more hostels for professional women and in favour of promoting an interchange of teachers, by the recognition for super-annuation purposes of service in approved schools in India, the Overseas Dominions and foreign countries. The Conference expressed the view that the regulations of the Board in regard to the first school examination should be so modified as to place Group 4 (including at present music and art only) on the same footing as Groups 2 and 3, so that a candidate who has passed in Group 1 and in any two of the other Groups should receive a certificate.

Miss Major (King Edward's High School, Birmingham) was elected President of the Association for 1919-1921.

## COLLEGE OF PRECEPTORS.

### COMMEMORATION DINNER.

THE Commemoration Dinner of the College of Preceptors took place at the Connaught Rooms on Friday, the 20th of June, this being the 73rd anniversary of the foundation of the College. Sir Philip Magnus, Bart., M.P., presided, and among those present were Col. Lord Gorell, M.C., Director of Army Education, Sir John Rees, M.P., Mr. A. U. Woolcock, M.P., and Sir Robert Blair, Chief Education Official, L.C.C. In proposing the toast of "The College" The President said:

"Meeting here to commemorate the 70th anniversary of the Incorporation by Royal Charter of the College of Preceptors, it is proper that I should say a few words as to the history of the College, as to the work which it has already accomplished, and as to the prospects of its further useful activities.

This I may say—from my connection with the College, extending over more than 40 years, and from my own knowledge of the influence which it has exercised on public education in this country—that there is scarcely any movement which has had for its object the improvement of our secondary education the lifting of it from the low condition into which it had fallen a century ago, or the raising of the status of the teacher, that was not anticipated and advocated by the founders of the College and advanced by those who subsequently took part in its work.

We celebrate to-day the 70th anniversary of the year in which the College received its charter. But the College was founded three years earlier, on June 20, 1846; and it was owing to the pioneer work which it had already achieved, and the public approval of its aims, that the petition for a Royal Charter was granted.

Those aims, as set forth in the memorial of the petition, were briefly:—

To protect the interests of the scholastic profession and of the public generally by requiring all persons desirous of being recognised as teachers and of entering the teaching profession to give some proof of their qualifications, both as to their knowledge and their ability to impart it, the test of qualification being entrusted to a legally authorised corporate body or college, consisting almost exclusively of acting teachers.

In the preamble to the charter which the College received these objects were clearly stated, and in the last clause of the charter, dealing with any surplus funds of the college—now, unfortunately, a very small remainder—it was stated that these should be applied "towards the maintenance of poor and diseased members of the College, or of widows and orphans of deceased members, or in or towards the founding or endowing of normal or training schools, or instituting lectureships on any subject connected with the theory or practice of education—or the interests of the scholastic profession, particularly within England and Wales."

Notwithstanding the addition to the Statute Book, during the last 70 years, of many Acts of Parliament dealing with education, we are as yet only on the road to secure all these objects.

It is interesting to note that these efforts were made by teachers themselves, who recognised the force and value of the public exposure of such schools as "Dotheboys Hall," in "Nicholas Nickleby," first published in 1836, which undoubtedly represented a type of school not unknown at the time when Dickens wrote. A member of the College, then living, said, "As regards society at large, we claim the merit of having been the first to discover our own disease, and to attempt at least the application of the only effectual remedy."

In the year following the incorporation of the College, a board was established for the examination of intending teachers, and in that same year 24 candidates were passed for the teachers' diploma, the examination for which, at that early date, included the subject of the "Theory and Practice of Education." A benevolent fund for "aged, distressed, and afflicted schoolmasters" was opened; and, as showing the activity of the early members of the College, on the 2nd of October, 1847, there appeared the first number of the EDUCATIONAL TIMES—a journal which, as the organ of the College for many years, has always upheld the higher aims of education; although it is no longer owned by or directly connected with the College.

I have referred to one or two of the early efforts of the College, in order to show the extent to which its founders anticipated the trend of educational reform, and worked for many years in advance of public opinion.

For instance, the idea that a special training for teachers in secondary schools was needed was scouted some years ago by those who, at the time, were regarded as high authorities in educational matters. Nevertheless the College persevered. In the year 1871 the Council arranged for the delivery of a course of lectures on the "Theory and History of Education," and lectures on this and cognate subjects have since then been regularly given at the college. In the following year the College sent a memorial to the Privy Council suggesting the appointment by the Universities of Professors of Education; and, largely as the result of these representations, Chairs of Education were founded at the Scottish Universities. Later on, lectures on education were delivered at Cambridge. London encouraged post-graduate courses for teachers by instituting the examination for a teacher's diploma; and, more recently, professorial chairs on education were founded by the University of London, to which two of the College lecturers have been appointed. The College may reasonably feel some pride, therefore, at the success of their continued efforts. Unfortunately the pioneers of some of the most useful movements too often fail to reap the fruits of their successful endeavours.

Nearly sixty years ago, in pursuance of the objects for which it was founded, the College circularised the principal schools throughout the country with a proposal for establishing a register of duly qualified teachers, somewhat on the lines of the Medical Register. This was the first step in a very important advance. The proposal was well received in many quarters. But new developments were not adopted then as rapidly as they are now. Parliament in those days did not legislate at lightning speed by means of Standing Committees. But the representations of the College were not unheeded. In 1879 a Teachers' Registration Bill was introduced for the first time in the House of Commons. The Convocation of London University passed resolutions in favour of such a Bill. I well remember taking part in the discussion and supporting the proposal; and it has been a matter of great satisfaction to me, as member of the Council of our College, and representative of my University in Parliament, to have been able to assist in the passing of a Bill which provided for the establishment of a Teachers Registration Council. That Council, created only within the last few years, may, and I hope and believe will, in the near future be entrusted with the discharge of duties that will give it a permanent position of influence and authority in our national system of education.

Before concluding this brief survey of the work achieved by the College, I must refer to one other movement inaugurated by the College and followed up by other bodies, which has been fraught with consequences that could not at the time have been foreseen—a movement which at first was greeted as a great educational measure of reform, but which is now regarded in some quarters as impeding true educational progress. I refer to the scheme for the examination of pupils in schools. This new departure, which I should say was no part of the original scheme of the College, was started in 1850, and was in full operation four years later. It was at first an endeavour, on the part of the College, to satisfy itself that private and certain endowed schools were staffed with competent teachers. Rightly or wrongly it was thought that the ability of the teachers to impart instruction might be tested by the knowledge acquired by the pupils, and that an examination of the pupils, whilst serving other useful purposes, would prove a rough test of the qualifications of the teachers. It was further believed that the examination of the pupils and the publication of the results would be a stimulus to steady work on the part of the pupils and a means of informing parents as to the progress of their sons and daughters. There was much to be said in support of these views—so much, indeed, that in 1858 the Universities of Oxford and Cambridge came into the field as examining bodies for school pupils, and their examinations have continued to be held till the present day. Examinations with somewhat similar objects were held, and are still held, by the Royal Society of Arts.

If the examination of pupils in schools is no longer regarded as helpful to good teaching and as a useful instrument of education, the change of opinion is largely due to the action of the Government, through its Education Department. They decided to go much further in this direction than the College had ever contemplated, and to carry the principle underlying these examinations to what they regarded as its logical conclusion, the payment in part of teachers on the results of the examination of their individual pupils. This method of payment was at first limited to teachers in elementary schools, but was later

on extended to teachers of adult pupils in evening classes under the Science and Art Department. The College, it is needless to say, gave no countenance to these arrangements for the remuneration of teachers. It was a system unknown in any other European country, and quite foreign to the higher aims and ideals of true education. But the fact that it was adopted by the Government, and remained in operation for many years, is interesting as showing that there are fashions in education as in dress—in the art of moulding the mind as in that of covering the body. As you know, all external examinations are now discouraged by the Board and other educational bodies. But can we say that in the near future there may not be a reaction against the present policy? The examination barometer has fallen from "set fair" to "stormy," but those here to-night may see it rise again to "change."

The few incidents I have quoted from the history of the College suffice to justify what I have already stated, that the College has been the pioneer of many far-reaching reforms in our educational system, and that its efforts have been successful in improving the teaching in a large number of secondary schools and in raising the status of the teachers and the teaching profession.

Now, as regards the future of our College, with which the toast is more directly concerned, prophecy is difficult. We live in a world of reconstruction. But those who can read the trend of passing events, need have no doubt that the College will continue to find much useful work to be accomplished in the educational life of the nation. Where shall we look for it? That's the question. I see signs of it in many of the problems now engaging public attention and awaiting solution. I see indications of great social and administrative changes in what may follow from the vote of the House of Commons on Wednesday, June 4th, by an overwhelming majority, in favour of some system of devolution. No one can predict what its effect may be on the control of education in this country. But if, eventually it leads to anticipated changes in our Constitution, giving more time for the public discussion of domestic matters, it will tend in many ways towards greater freedom from bureaucratic control by strengthening local effort, and by discouraging legislation by Orders in Council or Departmental Regulations. It will certainly help to create a strong feeling against any measures which might even seem to assimilate our educational system to that of Germany.

The College has only to be true to its original aims and objects, as clearly expressed in its Charter of Incorporation, in order to justify public confidence. The value of its work was fully recognised by our late King, who in reply to the loyal address presented to him on the occasion of the opening of our new buildings on 3rd March, 1887, said:

"For over 40 years the College has exercised a marked and growing influence for good upon the education given in some of our endowed schools, and, more particularly, in the numerous private schools for boys and girls, which are an important feature in the educational system of our country."

That "influence for good" we hope to continue to exercise. A committee of the Council is now engaged in suggesting new developments of our present activities, that may bring the College into closer relationship with the work of the secondary schools branch of the Board. We hope to suggest some means of associating more directly with the College the private schools and some of the endowed schools, and by the representations we may make and the influence which we may be able to exercise, to secure for the teachers of those schools conditions of service in no way inferior to those of teachers in schools fulfilling all the Board's regulations.

Our efforts will be directed towards making this College a centre of attraction for all schools not under the direct control of the Board, however diverse their curricula, provided that the training and teaching they supply is pronounced satisfactory by some educational authority recognised by the State. In all we do, we must strive after Efficiency and Freedom. It must be our aim to preserve different types of schools and to maintain that variety in our scheme of secondary education which has distinguished it from that of other countries. There are other paths along which we hope to advance—other objects towards which our efforts should be directed. We must never lose sight, however, of our primary object—the training of teachers. In this most necessary work, I hope we may be able to place our resources and our services at the disposal of the Board of Education and the local authorities, and by so doing to occupy a recognised position in the national scheme of education. Judging, therefore, from what we have already accomplished, from the character of the work in which we are now engaged, I look forward with confidence to the future."

## THE BRITISH ASTRONOMICAL ASSOCIATION.

*President:* HAROLD THOMSON, F.R.A.S.  
*Vice-President:* SIR FRANK W. DYSON, F.R.S., Astronomer Royal.

FOLLOWING the publication of the Report of Sir J. J. Thomson's Committee appointed to enquire into the position of Science in our educational system and its recommendation that the teaching of the main facts and principles of Astronomy should have a definite place in school curricula, the Council of the British Astronomical Association has resolved to offer the assistance of the Association in furthering this object, and has appointed a special committee for the purpose, consisting mainly of Schoolmasters.

(1) The Council of the Association has decided to admit schools to the advantages of affiliation, so that teachers may be able to keep in touch with the rapid progress of the Science in its different departments. (Affiliation fee, £1 ls. per annum, without entrance fee. Lantern slides could be hired from the Association for the use of an affiliated school, and the *Journal* of the Association would be forwarded regularly to it. Any master of such school would be entitled to attend the ordinary meetings.)

(2) The Council will prepare a special series of lantern slides for educational purposes. These may be bought by the school for permanent use. It is also possible that in many cases negatives could be lent from which schools might make their own slides.

(3) Whenever desired the Education Committee will be ready to give suggestions on such points as—

- (a) Observations for small telescopes.
- (b) Naked eye observations.
- (c) Text books.
- (d) Occasional lectures.

Enquiries and applications for affiliation to the Association should be addressed to the Secretary of the Education Committee,

E. O. TANCOCK, Esq.,  
 Wellington College,  
 Berks.

## DEMAND FOR FARM LABOUR.

### School-boys may be Employed but no National Scheme.

No national scheme for utilising school-boys on the land is to be organised for this year's harvest.

Last year, writes a *Daily Chronicle* representative, 35,000 boys from public and secondary schools spent a novel and healthy holiday lifting the huge potato crop and making themselves generally useful to the farmers.

They lived in tents and hostels and voted the life "first-class." In certain localities the boys will be available, and farmers can apply to the nearest Employment Exchange for them.

Where housing accommodation is limited camps and hostels will be set up, and for this purpose the Employment Exchanges are working in conjunction with the Agricultural Executive Committee of the country.

Tents, bedding, and furniture will be arranged for by the Board of Agriculture, in co-operation with the military authorities, who are organising a rationing system.

In view of the many demands for the regular employment of women in industry, the Women's Land Service Corps are not recruiting land workers.

At the same time they do not think it desirable to bring the leisured woman into economic competition with the woman who has her living to earn.

In previous years the bulk of the women recruited for seasonal work has been from the leisured class.

The Board of Agriculture is laying stress on the desirability, so far as possible, of employing casual labour locally.

It has circularised county committees to discover:—

Amount of skilled seasonal labour required in the county.  
 Wages offered and accommodation available.

The German prisoners of war employed on the land are being gradually withdrawn from farm work, and concentrated on works of public utility.

## LETTERS TO THE EDITOR.

## THE ARMY AND EDUCATION.

SIR,

The Army Education Scheme has figured very prominently in the press during the last few months. Much has been said both for and against it. As the education, both of our future Army and of the men about to be demobilised, is of paramount importance to the welfare of the nation at large, it may be worth while to give the opinion of one who has had considerable experience in teaching soldiers.

The conception of the present scheme is admirable, and it is perfectly obvious that Lord Gorell is one of the best men to take the matter in hand. He is to be congratulated on his initiative, and the "vim" which he has succeeded in instilling into the authorities, who hitherto have been negligent in this very important matter of the soldier's education.

Lord Gorell's sincerity in the matter is perfectly apparent from his choice of staff, which consists of educationists thoroughly cognisant of the requirements and conditions of present day education.

The schemes of work are in every way excellent and comprehensive, but in the application of the scheme Lord Gorell has from the very nature of things been unfortunate in his circumstances. When the scheme was initiated it was evidently the intention of the authorities to enlist the assistance of the thousands of trained teachers then in the Army. Shortly afterwards, however, the Army Council, as a result of the Prime Minister's pledges at the General Election, ordered the demobilisation of Group 43 (schoolmasters, etc.), thus depriving the scheme of the necessary organisers and teachers.

When the scheme was launched there was already in existence in the Army an Education Department—the Corps of Army Schoolmasters—but for some reason or other the Adjutant-General's Department seem to have placed obstacles in the way of this Corps of specialists being embodied in the scheme.

It was therefore necessary to improvise the requisite staff of instructors. For this purpose special schools of education have been established at Oxford and Cambridge (now Newmarket), to which selected officers and men are sent for a one month's course of intensive training as instructors. This of course is reverting to the old Army idea of "cramming."

The scheme wants teachers, not instructors; and you cannot turn out a teacher in a month. The writer has been engaged in teaching for over 23 years, and has much to learn yet. In the old days of Army education, instructors required for work in Army schools were sent on a six months' course, and were afterwards employed under the trained and experienced eye of a fully qualified Army schoolmaster.

The weakness of the present scheme seems largely due to too much decentralisation. Appointments as education officers and instructors are made locally by individuals who in many cases are themselves unqualified in this direction. I am perfectly aware that the general tendency of this age, in all spheres, is to decentralise as much as possible, but in a homogeneous community like the Army, the essence of success is uniformity. Units and individuals are constantly on the move; then how, under decentralisation, is any continuity of instruction to be expected in a course of studies taken up by a student. Under the old system it was possible for a soldier, when he left one station, to pick up the thread on his arrival at his new station. Whatever may be the intention of the War Office (S.D. 8) in this direction, in actual practice much is left to the sweet will of the local education officers and

instructors. Now the question arises: Who and what are these educational officers and officer instructors?

To quote the words of a recent Command Order calling for applicants for these appointments, they should have:

- (i) A sound general education, and, if possible,
- (ii) Specialised knowledge;
- (iii) Some ability to impart instruction.

Now, however "sound and general" the education of an individual may be, he cannot be a specialist in education. As a general rule a teacher is made, not born; and if these people of "sound general education" are to be employed, they can be of best use only when under the guidance of a trained teacher who has studied and understands the principles of his profession. In the application of this scheme, however, we seem to be in a region of "topsy-turvyism," and the trained man is often under the jurisdiction of the amateur, and in some cases of an absolute novice. This is the result of too much decentralisation. The area Education Officer, at his wits' end to find officer instructors, has had to use very raw material.

Lord Gorell eventually succeeded in overcoming the objections of the Adjutant General's department, and since 3rd March the Corps of Army Schoolmasters has been transferred to S.D. 8. Lord Gorell, therefore, has now at his disposal a body of about 300 highly trained and experienced men, who have the necessary organising and professional qualifications to ensure success to his scheme. The appointments of Education Officers and Officer Instructors should be thrown open to these men, who should be given commissioned status commensurate with the work and qualifications demanded of them. In this respect, the Treasury, which has hitherto treated the Army Schools Department with scant courtesy, should realise that in its position as employer, the Government has a duty towards its employee—in this case the soldier—the duty of ensuring not only his physical, but also his intellectual welfare, and this can be done only by entrusting it to the care of the men best suited for the work, who should be granted the status and emoluments of professional men.

The recent appointment of Mr. P. A. Barnett, late H.M. Chief Inspector of Training Colleges, to the staff of the Director of Staff Duties (Education), is a step in the right direction, for he brings experience of education in civil life, and also of the training of the Army schoolmaster, for Mr. Barnett was deputed some years ago to report on the training and qualifications of the Army schoolmaster, and it is to be hoped that his knowledge will be brought to bear on Authorities with a view to doing justice to that professional branch of the Army which has been so deliberately "side-tracked" during the war.

The scheme has been stigmatised as "too ambitious." Such, however, is not the case. Provision has to be made for the requirements of two classes of individuals: (i) Those about to be demobilised, and (ii) the permanent Army. The requirements of the first class are much more varied and extensive than those of the second class, and the conditions obtaining when troops are on the move are not conducive to the best organisation; but as the conditions become more stabilised, so we shall see the full effect of the scheme. Some very absurd criticisms have been thrown out, but as a rule I find they come from individuals who, in their hurry to be demobilised, have not the necessary personal experience to benefit by the scheme.

With regard to class (ii), the conditions have become more or less stable, and the keenness and enthusiasm of all ranks and grades is perfectly apparent where the Army of Occupation is concerned.

Was there ever a machine which worked smoothly on being first set in motion? Surely a nut here, a valve there, and a pinion somewhere else, required adjusting; but the machine was none the less valuable and useful.

Yours faithfully,

AN "OLD REGULAR."

# Cambridge University Press.

## The Purpose of Education.

An Examination of the Education Problem in the Light of Recent Psychological Research. By ST. GEORGE LANE FOX PITT. Crown 8vo. 7s 6d net.

A new impression of the second edition, bound in cloth. The volume contains a Preface by Prof. EMILE BOUTROUX, a Reply to Critics, and an additional chapter, Perfection as the Ideal and Lessons of the War.

"With the main thesis advocated we are in hearty agreement, and the presentment we have found stimulating in no ordinary degree. The perusal of the book could hardly fail to be profitable to any thoughtful man or woman."—THE TIMES.

## A Short Italian Dictionary.

By ALFRED HOARE, M.A. Demy 8vo. Vol. I, Italian-English, 9s net; Vol. II, English-Italian, 7s 6d net. Vols. I and II, bound together, 16s 6d net; india-paper edition, 17s 6d net.

"May be heartily recommended as far and away the best portable dictionary of Italian we have met with. We have tested it with newspapers, fiction, and scientific writings, and in each case it has proved its utility."—THE SATURDAY REVIEW on Vol. I

## A Manual of French Composition.

For Universities and the Higher Classes of Schools.

By R. L. G. RITCHIE, M.A., Professor of French in the University of Birmingham, and J. M. MOORE, M.A., Rector of the Madras College, St. Andrews. Demy 8vo. 6s net.

"It is indeed a fine scholarly piece of work. The authors . . . are fully justified in claiming that 'it constitutes a new departure in French composition'; no teacher who does higher work in French can study it without profiting greatly."—THE SCHOOL WORLD.

## Translation from French.

By the same authors. Demy 8vo. 6s 6d net.

"A book which is clear, helpful, and a pleasure to read and work through. We say 'work through,' because the most valuable part is certainly that section which consists of models, or specimens of how fine translation should be carried out. It is in these passages, so carefully and delicately handled, that the science and art of the authors is most evident. . . . This, in short, is a very good book, and it should be bought."—THE TIMES.

## A Junior French Reader.

By the same authors. Ready shortly.

## La Grande Guerre.

Récits de Combattants, Recueil fait et brièvement annoté par A. WILSON-GREEN, M.A. Crown 8vo. 4s net.

The range of this volume of episodes of the Great War, written by men who took an active part in the events they describe, is wide and varied. It covers warfare on land and in the air, in France, in Serbia and at Cape Helles; it includes vivid pictures of life in and behind the trenches, in devastated France, in a French hospital, and in a German prison.

## Selections from Sainte-Beuve.

Edited by ARTHUR TILLEY, M.A., Fellow and Lecturer of King's College, Cambridge. Crown 8vo. 6s net.

## Regnard : Le Joueur.

Edited by ARTHUR TILLEY, M.A. Crown 8vo. 4s net.

## Lesage : Turcaret.

Comédie. Edited by A. HAMILTON THOMPSON, M.A., F.S.A. Crown 8vo. 6s net.

## Honoré de Balzac. Le Colonel Chabert.

Edited by SYDNEY H. MOORE, M.A. Crown 8vo. 3s net. Cambridge Modern French Series.

## J. J. Jusserand. La Vie Nomade et les Routes d'Angleterre au XIVe Siècle.

Edited by A. WILSON-GREEN, M.A. Crown 8vo. 4s net. Cambridge Modern French Series.

## Lermontov's Novice.

Russian text, accented, with introduction, notes, and vocabulary, by J. D. DUFF, M.A., Fellow of Trinity College, Cambridge. Crown 8vo. 5s net.

## Stories from Spenser.

By MINNA STEELE SMITH, Fellow of Newnham College, Cambridge. Crown 8vo. With 8 pictures. 3s net.

"This little book of stories from Spenser is intended to form a volume of the series admirably begun by Miss Macaulay's STORIES FROM CHAUCER. The selections from Spenser in the present volume are taken from the first two books of THE FAERIE QUEENE, with a few episodes from Books III and IV. Short passages of Spenser's verse have been inserted at frequent intervals."—EXTRACT FROM THE PREFACE.

## Stories from Chaucer.

Retold from THE CANTERBURY TALES with introduction and Notes by MARGARET C. MACAULAY. Crown 8vo. With frontispiece and 28 illustrations from old MSS. 2s net. Text, without Introduction and Notes. 1s 6d net.

"Miss Macaulay's STORIES FROM CHAUCER deserves to be singled out for honourable mention among the crowd of books of the kind for a certain unmistakable flavour of accurate scholarship pervading and informing it, for its carefully selected and highly appropriate illustrations, and for the pleasant type."—THE PREPARATORY SCHOOLS REVIEW.

## Britain in the Middle Ages.

A History for Beginners. By FLORENCE L. BOWMAN, Lecturer in Education, Homerton College, Cambridge. Crown 8vo. With 28 illustrations. 3s net.

"Miss Bowman has rightly used contemporary literature as living evidence of the spirit of the times. . . . The book is very attractive and useful and should be widely used."—THE TIMES EDUCATIONAL SUPPLEMENT.

## Maps and Survey.

By ARTHUR R. HINKS, M.A., F.R.S. Demy 8vo. With 24 plates. 7s net.

"A book from the pen of Mr. Hinks on the subject of maps and survey is certain of a warm welcome, firstly because the author is thoroughly master of his subject, and secondly because he has the valuable gift of clear exposition. Those who take up this book with the hopes of getting a lucid account both of the science of map-making and of the art of using a map when it is made will not be disappointed. . . . The book is a thoroughly good one."—THE GEOGRAPHICAL JOURNAL.

## Map Projections.

By A. R. HINKS. Demy 8vo. With frontispiece and 19 figures. 6s net.

"An excellent book. . . . Starting from first principles, he steadily carries the reader to a complete elucidation of the various formulæ of projection. The manual traces the relations between the various projections, and points out their several good qualities, their defects, modes of construction, and limits of usefulness."—THE EDUCATIONAL TIMES.

## Advanced Lecture Notes on Light.

By J. R. ECCLES, M.A., Head Master, Gresham's School, Holt. Crown 4to. 7s 6d net.

This book has been prepared in response to requests for a more advanced course from some who have found the same author's LECTURE NOTES ON LIGHT of service. Though the method adopted is, in the main, similar, the present volume approximates more to a text-book.

## Recent Discoveries in Inorganic Chemistry.

By J. HART-SMITH, A.R.C.S., F.I.C. Demy 8vo. 4s 6d net.

"Every teacher has a favourite textbook which fits his teaching methods better than any other, but scientific textbooks grow rapidly out of date. This little book will obviate the difficulty; it contains in compact and handy form a résumé of those recent discoveries which have made the regular textbook incomplete."—THE A.M.A.

## Botany.

A Textbook for Senior Students. By D. THODAY, M.A., Lecturer in Physiological Botany, University of Manchester. Revised and enlarged edition. Crown 8vo. With 230 text-figures. 7s 6d net.

"It is a pleasure to be able to recommend an introductory book on botany. . . . The illustrations are excellent and the general style of the book is of the quality to be expected from the Cambridge Press."—THE GARDENERS' CHRONICLE

A complete Educational Catalogue will be sent on request

FETTER LANE, LONDON, E.C. 4. C. F. CLAY, MANAGER.

## LITERARY SECTION.

## REVIEWS.

## School Celebrations.

Under various designations, such as "The Dramatic Teaching of History," "School Plays," etc., there is going forward an attempt to enlist in the service of instruction the child's talent for make-believe. In a book lately written by Dr. F. H. Hayward and Mr. Arnold Freeman, which is published by P. S. King and Son at 10s. 6d. net, with the title "The Spiritual Foundations of Reconstruction: a Plea for New Educational Methods," there is a definite appeal for a more extended use of school liturgies, to be employed in conveying those deeper impressions which are the true basis of education. The book is provocative, and is probably intended to be so, for Dr. Hayward might adopt the claim made by Socrates that he was a kind of gadfly performing the useful and necessary function of rousing the community to think. Certainly I find all Dr. Hayward's writings an excellent cure for lethargy of mind. That is my first reason for urging all teachers and parents to read this book. The second is that it is well worth reading for the sake of the big view which it presents of educational possibilities and its shrewd—occasionally shrewish—criticism of existing practices and aims.

The principle of the book, stated by the authors themselves, "in its bleakest and most absolute form," is that the class teaching of the Bible, literature, music, history, and certain other subjects should be largely abolished in favour of a liturgical ceremonial, or celebrational treatment. These subjects are not so much to be "learned" as "imbibed." Excellent counsel! but note what it involves. To begin with we must cease to examine pupils in these branches. You might as well ask them to regurgitate the food which they ate last week as to reproduce knowledge that they have "imbibed." We should have to abolish the whole scheme of examinations as we now know them. It would be an excellent thing, but Dr. Hayward must not feel aggrieved if its accomplishment is delayed.

Further, we shall require at least a new breed of teachers, if not of Englishmen. The fact is that we are poor hands at celebrations. The paralysing self-consciousness of the average Briton is the main reason why our chief orators are of Celtic origin and our leading actors Semitic. We are shamefaced in our public worship and we blush at the thought of giving the rein to our emotions. The average schoolboy would rather take a swishing than a part in Dr. Hayward's moral dramas. It would be an excellent thing if we were less self-conscious, but here again Dr. Hayward must not feel aggrieved if the necessary change in our national temper is delayed. These remarks apply to any attempt to make celebrations and liturgies, even such admirable ones as the authors include, universal features in our school work. They are not intended to disparage the excellent and stimulating suggestions which are scattered through the pages of this remarkable book.

SILAS BIRCH.

## Education.

PROBLEMS OF NATIONAL EDUCATION: by Twelve Scottish Educationists. (Macmillan. 12s. net.)

Mr. John Clarke, Lecturer in Education at the University of Aberdeen, has got together a team of two women and ten men to deal with the present state of education in Scotland. The result is a book for the times that is meant to focus and direct opinion. The prefatory note by the Right Hon. Robert Munro, K.C., M.P., might well have been omitted, but after all it serves the purpose of emphasising the fact that the interest of the book centres round the Education Act that the Secretary for Scotland succeeded in passing last year. The editor keeps in the background, and allows his contributors a free hand. The separate chapters give clear indications that a wise correlation has been made at headquarters. There are occasional duplications, it is true, but fewer than might be expected in such a work. The natural man in such a case tends to begin at the beginning of the whole subject, instead of taking generalities for granted and plunging at once into his special part of the subject. As might have been expected, Mr. Clarke has been more successful with the men than with the women in this matter. We are surprised at the difficulty Miss Ainslie appears to experience in coming to her subject—*The Aim and Outlook in the Secondary Education of Girls*. Five pages are gone before we can honestly write the "here beginneth" of the lesson, and even so there are other seven used up before we really get to the "direct consideration of the problems of secondary schools." Miss Fish cannot keep her studies on the Schoolmaster in Literature out of her treatment of the *Interests of Girls in Elementary and Continuation Schools*, but her literary references do not interfere with the development of her theme.

It is true that the men, too, have their preoccupations. One turns with bored conscientiousness to Professor Burnet's *Classics in School and University*, knowing pretty accurately what a Professor of Greek will have to say on the subject. But in spite of himself the bored reader will have to sit up when he gets into the hands of Professor Burnet; for here we have no cloistered pedant who knows Greek and nothing else. If all classical teachers were like this, there would be no need to write defences of the classics. But unfortunately Professor Burnet is the exception, and Dr. A. P. Laurie in his section on *Technical Education* can write "That love of knowledge for the sake of knowledge which inspired the Greek civilisation is not understood by the very men who have received a classical education. They do not see that the man of science is carrying on the tradition of Greek culture to-day." We wonder if Dr. Laurie had a chance of reading Professor Burnet's contribution, and if this passage is a reply to the Professor's claim that Science is only Greek thought made explicit. In any case we have the scientific attitude presented in an extremely attractive way by Professor Arthur Thomson, of Aberdeen. His *Place and Function of Science* is exactly what his admirers would expect from him, and it is hard to imagine higher praise than that. A careful reader of this book cannot fail to be struck by the evidence it supplies of the educational influence at this moment of the Professor of Greek at St. Andrews. His recent book on German education has produced a profound effect, and it is instructive to note how frequently and how respectfully his views are referred to in the volume under consideration.

The historical aspect is admirably treated in a preliminary sketch—*Fifty Years of Scottish Education*—by Mr. MacGillivray; and *Local Administration* is thoroughly dealt with by Mr. John Clark (not the editor, whose name ends with an e). There is a curious contrast between the treatment of *Physical Interests*, by Sir Leslie Mackenzie, and of *Moral and Religious Elements in the School*, by Dr. John Strong. Sir Leslie seems to have all the advantages, for he deals with a rapidly developing subject on which legislation has been particularly active, while Dr. Strong has to content himself with a theme that is worn threadbare and that at its best does not lend itself to sprightly treatment. Dr. Morgan treats with his usual sober enthusiasm the *Social Aspects of Education*, a subject on which he has made

# TRANSPORT

THE MAGIC CARPET OF INDUSTRY.

By J. P. GRIFFITHS.

A delightfully fascinating, interesting, and instructive book for young people at the inquiring age.

Briefly describing the history and development of transport by sea, road, canal, and railway.

Suitable both for individual reading, and for class use. Prospectus sent free or a copy for inspection if desired.

NUMEROUS HALF-TONE ILLUSTRATIONS and MAPS.  
Crown 8vo. 256 pages. 2s. 6d.

# THE SCHOLAR'S BOOKS OF TRAVEL

FOUR BOOKS :

1. BRITISH ISLES.
2. EUROPE.
3. OTHER LANDS.
4. BRITISH EMPIRE.

Composed of choice extracts from the "travel" works of Dickens, Kingsley, Ruskin, Smollett, and others.

Each presents a complete travel picture—a first-hand description of lands and peoples, thus imparting a sound geographical knowledge, and at the same time creating a taste for good literature.

FOR CLASS READING OR SILENT STUDY,  
With ILLUSTRATIONS and MAPS.

Each Crown 8vo. Cloth, 1s. 6d.

## GEORGE PHILIP & SON, LTD.

32, FLEET STREET, LONDON, E. C. 4.

## THREE ITEMS

comprise a remarkably efficient and satisfactory equipment of apparatus for Practical Mathematics & Mechanics, viz.,

- Cussons' Capstan Block System
- Cussons' Ribbon Atwood Machine
- Cussons' Fletchers' Trolley

*Full Catalogues and Instructions.*

Just Published. Price 1/- net, 1/2 Post Fee.

### "WHAT WILL MY PENSION BE?"

The School Teachers' (Superannuation) Act, 1918,  
Described and Explained by E. H. Allen.

This new book answers every question authoritatively. It will save you anxiety, delay, and possible loss.

You can obtain it by return of post by using the coupon below.

"What Will My Pension Be?" contains:—

1. Part I.—The New Act Summarised and Explained.
2. Part II.—The Act of 1898, with full Tables of Annuities.
3. Part III.—52 Questions and Answers on Difficult or Interesting Points of the Act of 1918.
4. Appendix.—Important Rules, etc.
5. The New Act at a glance.

Pin a P.O. for 1/2 to this form and post to-day.

To Messrs. EVANS BROTHERS, Ltd.,  
Montague House, Russell Square, London, W.C. 1.

Please send me a copy of "What Will My Pension Be?" I attach P.O. for 1/2.

E.T., July, 1919.

himself an authority. Mr. Malloch is on his own ground when he deals with *Teaching as a Profession*. The jaded reader rubs his eyes when they tell him that "It is indisputable that in comparison with other professions, teaching has, in recent days, secured, as far as the standard of general education goes, a higher quality of recruit than, say, law or medicine." We hope it is indisputable: at any rate it is not our business to dispute it. Professor Grierson's chapter on the *Scottish Universities* is written in a particularly happy vein. He introduces the personal element in the most charming and yet convincing way. South of the Tweed we need just such a sympathetic and at the same time critical exposition. We are interested to learn that the pass M.A. in Scotland is being discredited among students because of the fall in its value "as a recognised qualification for the teaching profession in Scotland."

Evidently the teachers of Scotland are not at all enamoured of the present set of examinations for which they have to prepare, and it is worth our while on this side of the border to learn the pros and cons of "qualifying," "supplementary," "intermediate," and (surely most unjustifiable name of all) "post-intermediate" courses. Mr. Clarke has deserved well of the profession in supplying us with this valuable mine of information and opinion on matters that are of moment in England as well as in Scotland.

MODERN EDUCATION IN EUROPE AND THE ORIENT: by David E. Cloyd. (The Macmillan Co. 7s. 6d. net.)

Professor Cloyd has set out in this book to give "a simple, clear, and comprehensive statement" of what various countries "are doing through their educational systems to better society." The countries selected are England, Scotland, France, Germany, Switzerland, Holland, Denmark, Norway, Sweden, Japan, and China. The aim is not over ambitious, as the author has in view the "normal school and college student"; and he may fairly claim to have succeeded in attaining it. But I am a little puzzled that a book bearing the date 1917 should only now reach the reviewer. It is particularly unfortunate that the book should stop short just before the two important Education Acts that have so greatly modified the educational position in England and in Scotland as to render of only historical interest the presentation here given. The book is well documented throughout, but it is curious that so few Americans seem to come across Sir Cyril Jackson's *Outlines of Education in England*, which contains just the sort of things our transatlantic visitors want to know. Many Scots readers, not to speak of training college students in America, will be puzzled by the reference on page 65 to "the five universities," and Scotsmen will certainly rub their eyes when they read on page 89 that "no religious subjects are taught in the public schools."

A useful feature in the book is the introductory section in each chapter dealing with the government of the country under discussion. The author wisely takes it for granted that the ordinary college student needs guidance in this matter, and the information he supplies is just sufficient for the purpose. Professor Cloyd has a keen eye for picturesque detail, as is seen for example in his note on the connection in China between the suffrage and the smoking of opium. The proof-reading has not been all that could be desired, as witness the use of the term *colonial* on page 194. As a class-book the volume should be exceedingly useful.

J.A.

SUGGESTIONS OF MODERN SCIENCE CONCERNING EDUCATION: by Jennings, Watson, Meyer, and Thomas. (Macmillan Co. 5s. 6d. net.)

The four lectures that make up this book appear to have been given in the evening to audiences arranged for by the Joint Committee on Education. The only information we receive about this committee is that "Its work is threefold: to secure publicity for educational topics, to encourage school visiting based on recent school surveys and a study of experimental schools, and to seek what new light on the subject might be obtained from modern science." American mothers of an enlightened brand want to know a great many things, among them "why, during the years when life is largely sensation, do we screw our children into desks five hours a day; if variety of type is desirable, why strive for uniformity; if surplus energy is necessary to further evolution, why not conserve that wonderful superabundant vitality of childhood?" In this enquiring turn of mind the committee have turned over these questions to scientific men, and the book before us is the result. Three

of the authors are professors at John Hopkins University the fourth hailing from the University of Chicago. We must treat their evidence with respect, even though they make no pretence to be educational experts.

Professor Jennings describes himself as "a zoologist, a general biologist," and plunges at once into the biological aspect of child-life. What astounds him is the diversity in the fundamental make-up of children, and the amazing variety of type that nature has put into the collection. By calculation about the interaction of 24 strings, regarding which he is far from clear in his exposition, he shows what an enormous number of possibilities are bound up in every new human being, and from this works out certain reasons for optimism on the part of teachers and parents. He has a great deal to say in a delightfully interesting way about the "blights" from which children have to be protected, and in the process he takes occasion to upset some of the most cherished opinions we had formed about the causes of "colds," and about the functions of carbonic acid gas. Ventilation as explained in our ordinary text-books appears to be all wrong. Those of us who prefer stuffiness to chilly draughts will have to look elsewhere for arguments to support our position; but in any case we get the comfort of learning that cooling down the body beyond a certain temperature renders us peculiarly liable to certain blights. Were it not for the authority that surrounds the professor in one of the best of America's universities, we might well doubt the views here set forth, but though they are new and in contradiction to much that we learnt at school, they hold together very well, and certainly do give the reader a degree of comfort. In particular, the doctrine of *attention* to the various physiological functions is a very attractive one.

When Professor Watson gets his turn he deals with *Practical and Theoretical Problems in Instinct and Habits* in a way that carries conviction. In his laboratory he has made a special study of babies, practically from their birth. He reassures us to start with by telling us that "the human infant is not the hothouse plant that it is supposed to be," and that among the hundreds of newborn infants experimented upon at Hopkins there has never been the slightest accident, nor have the babies suffered the slightest ill-health from the continued observations. He reduces the emotional reactions of babies at this stage to three: Fear, Rage, and Joy or Love. The treatment is intensely interesting for both parents and teachers, and his results are full of suggestion. Professor Watson quickens the conscience of all who have to deal with very young children, but he does his best also to stir the conscience of those who have the appointment of teachers for this class of pupil. Infants' mistresses will highly approve of this part of the lecture. The laws of habit formation are analysed so as to appeal to the practical teacher in a way that they hitherto failed to do. Professor James's conclusions are flatly denied, and great hopes are held out to middle-aged habit-formers. The attachment and detachment of emotional stimulus is exceedingly well managed.

Dr. Meyer is very effective in his treatment of *Mental and Moral Health in a Constructive School Program*. He regards the topic of Psychology as being "the function and activity of the unified organism"; he emphasises the total behaviour of the individual, and works out his views in his plan of a life-chart. Like his fellow contributors, he is doubtful about the existence of "the normal child," and ingeniously gets out of the difficulties of the position by acknowledging "many standards of normality." Though his speciality appears to be abnormality, he has enough sympathy with the teacher of normal children to plead for his better recognition by society.

Professor Thomas concludes the series with a fascinating study of the primary-group norms in present day society, and their influence on the educational system. He makes out an excellent case for the view that we have now reached a stage in social development at which the change of the group-norm can be accomplished much more rapidly than at any previous time, and that this facility of change is increasing at a higher rate than ever before. We are thrown back to Walter Bagehot's "cake of custom," but supplied with a much more effective way of breaking that crust when the needs of society demand it. The reversal of all our ordinary ways of looking at things is indicated by the staggering statement: "We must first understand the past from the present." Most of us have been, in our history lessons, teaching just the opposite. Yet Professor Thomas shows good ground for the faith that is in him. However

(Continued on page 278.)

## THE TEACHING OF ENGLISH LITERATURE.

MESSRS. J. M. DENT & SONS publish DR. RICHARD WILSON'S three charming reading books, which are now in use in a large number of the best schools.

Each 2s. 3d. Coloured plates and other illustrations

### Coronata.

Poems in Rhyme and Rhythm. Large Type, New Copyright Poems, including a few on the war.

*Educational News.*—"Dr. Wilson has a wonderful faculty for choosing just what is certain to arrest and inspire young readers."

### Storyteller's Hall.

A Book of purely Literary Reading for Standard IV or V. Folk Lore, Fables, etc.

*Journal of Education.*—"We can unreservedly praise this collection of stories and legends told by Dr. Wilson."

### Treasure Trove.

A Book of Literary Selections for Standards VI and VII, Central Schools, and Adult Classes.

*Scottish Class Teachers.*—"The Editor has done his share of the work as excellently as the Publishers have done theirs."

Applications for specimen copies will be entertained. Requests for same should be addressed to

DEPT. "D," ALDINE HOUSE, BEDFORD ST., LONDON, W.C. 2.

By Special

Appointment.

To their Majesties the King and Queen and H.M. Queen Alexandra,

## WINSOR & NEWTON, Prepared Water Colours

IN

WHOLE and HALF CAKES, WHOLE, HALF, and QUARTER PANS,  
and WHOLE, HALF, and LARGE TUBES.

Quarter Pans of Winsor and Newton's Artists' Water Colours are of the same outside dimensions as the Half Pans. They may, therefore, be used in Winsor and Newton's range of Half Pan Japanned Boxes.

The advantages of habituating the Student at the outset of his career to the use of the BEST materials are so obvious that no attention need be drawn to them.

Messrs. Winsor and Newton's Artists' Water Colours are necessarily more expensive than those usually manufactured for School use, but as, owing to their superior strength, a small quantity yields approximately the same amount of colour surface as the larger pans of Water Colours generally sold for Students' use, the expense in both cases is much the same.

The special attention of Teachers and the public is, therefore, invited to these Quarter Pans of Colour, which, costing practically the same, provide the Student with a superior article.

Full detailed catalogue may be obtained from any of the leading Artists' Colourmen throughout the Country, or from 39, Rathbone Place, London, W. 1.

Established nearly a Century.

## BACON'S WALL MAPS & ATLASES

### THE MAP ORDERING PROBLEM.

The final findings of the Peace Conference will only affect four of our large Wall Maps.

If you are in need of any of the following, you need not delay ordering, as they are unaffected:

ENGLAND  
SCOTLAND  
IRELAND  
BRITISH ISLES  
NORTH AMERICA  
CANADA  
UNITED STATES  
PANAMA  
SOUTH AMERICA  
INDIA  
AUSTRALIA  
NEW ZEALAND

We shall issue at the earliest possible moment after the new boundaries are finally settled out

NEW WALL MAPS  
OF  
EUROPE  
AFRICA  
ASIA  
THE WORLD

Order in advance to secure early delivery. Underline "New" on Order Form.

### BACON'S WALL MAPS.

20 Excelsior Political Maps, 5 by 4 feet	21/-
11 Large Print " " 4 " 3 "	12/-
25 Reduced " " 40 " 30 inches	7/6
20 Bold Feature " " 40 " 30 "	7/6
14 Contour (Orographical) Maps, 5 by 4 feet	21/-
8 " " 40 " 30 inches	7/6
55 Physical and Economic Maps, 40 by 30 inches	6/-

The majority of the 6/- and 7/6 Maps are also stocked arranged as Wall Atlases.

Four, or more, of the 6/- and 7/6 Maps may be selected by customer, and supplied cloth, cut-to-fold, eyeleted, in case, at a cheaper rate. Particulars in Catalogue.

Send a postcard for Catalogue, Specimen Sections of above, and particulars of our Scholars' Atlases.

G. W. BACON & CO. Ltd., 127, Strand, London, W.C. 2.

## PITMAN'S POSTAL COURSES

The postal tuition meets exactly the requirements of teachers who are unable to secure oral training, or who desire to pursue the study of commercial subjects at home. One course, or any group of subjects, may be taken at any time, the lessons commencing from any stage of present knowledge. Write for details, stating the subjects in which you are interested.

PRINCIPAL: FREDERICK HEELIS, F.R.S.A.

DIRECTOR OF STUDIES: Dr. ROBERT W. HOLLAND,  
O.B.E., M.A., M.Sc., LL.D.

206, SOUTHAMPTON ROW, LONDON, W.C. 1.

much the reader may be disconcerted by these new points of view, he cannot but agree that the committee were, as they say, "in duty bound to share with all parents and teachers the remarkable papers written in response to their need."

J.A.

### English.

"ALL CLEAR": A BOOK OF VERSE COMMEMORATIVE OF THE GREAT PEACE: by John Oxenham. (Methuen and Co., Ltd. 1s. 3d. net.)

A school-boy recently made the naive statement that England has no poets to-day. A perusal of the volume before us leads us almost to the same conclusion. The contents consist of "All Clear" in eight cantos, and "The Book of Praise" in fourteen cantos. Those who like jingling lines with a strong pious flavour will here find full measure. The author has a ready gift of verse-making. Yet of real poetry and genuine lyrics we find but little, in spite of Mr. Oxenham's strenuous efforts in roman type and in italics. Here and there we find an obvious imitation of some of the greater poets, as in the line:

The murmurous hum of homing bees,

though this is spoiled by the next line:

All tireless in their sweet (!) activities;

but generally what is meant to be a joyous Te Deum is at the ordinary level of a Revivalist Hymn. Most of the poet's ideas and methods are ordinary and conventional. Thus nectar is of course "quaffed," spring is youthful and virginal, summer is maternally, autumn is ripe and mature, kine browse, shepherds have a patriarchal look, the lambs frisk, the calves gambol, and of course the idyllic day ends in the "gloaming." When these well-worn ideas are exhausted the author rushes easily and glibly into verbose paraphrase of Bible and Prayer Book extract. Words indeed he never lacks. He will coin you a new one on every page. Yet we are at a loss to know why "birthing" is preferred to "birth," "blent" to "blended." We might also ask for the meaning of "time and everness," and of "æons of eternity," while when we bump into words like "omnific" and "vociferent" we feel that the writer is indeed in the toils of his own "rhythmic-jingling chains."

FELIX.

### MACMILLAN'S POCKET CLASSICS.

- (1) DICKENS' OLIVER TWIST: edited by F. W. Pine. (1s. 6d. net)
- (2) SHERIDAN'S PLAYS: edited by Will D. Howe. (1s. 6d. net.)
- (3) ENGLISH ESSAYS: edited by David T. Pottinger. (1s. 6d. net.)

These are very attractive well-bound little editions of English Classics edited by Americans for American schools and colleges. The full list of this series is long and comprehensive, and includes representatives of the best English and American authors. The handy well-bound little volumes should find a ready welcome in English as well as American schools.

X.

### Some Books on Modern Languages.

- A. Hamilton Thompson: Lesage's *TURCARET*. 6s. net.  
 A. Tilley: Regnard's *LE JOUEUR*. 4s. net.  
 A. Tilley: Selections from *SAINTE-BEUVE*. 6s. net.  
 A. Wilson-Green: Jèsseraud's *LA VIE NOMADE ET LES ROUTES D'ANGLETERRE AU XIVe SIECLE*.  
 S. H. Moore: Balzac's *LE COLONEL CHABERT* (Cambridge University Press).

Cambridge here presents us with some delightful texts, well printed on good paper. They are provided with competent introductions and sufficient notes. The last two have vocabularies in which each noun is preceded by the definite article, if the noun begins with a consonant, the indefinite if a vowel,—a far better way of teaching gender than the usual *s.m.*, *s.f.*

The spelling of *Le Joueur* has been modernised. This is necessary for learners, whom anything strange, such as an archaic spelling or verse form, frightens into thinking a text

much harder than it really is. It has the obvious disadvantage that it misses the opportunity of teaching that spelling has been reformed in the past, and—might be reformed again. Thus it indirectly strengthens the superstitious faith in the divine right of orthography. A specimen page in the original manner would serve as a corrective.

We do not know whether it would have been justifiable to re-paragraph *Sainte-Beuve*. Some of the paragraphs run to more than a page and a half. We wonder how many texts have gained an undeserved reputation for heaviness owing to the discouraging effect of these "tombstones."

Mr. Wilson-Green and Mr. Moore have prepared some exercises which are "direct" in the sense that they are in French, but hardly suggest the product of experienced Direct Method teachers, because some of them are so hard.

We should not anticipate a very lively response, from any but an exceptionally gifted class, to instructions like the following:—

*Définissez: néophyte, insouciamment.*

*Distinguez un mémoire, une mémoire; un royaume, un domaine; une requête, une demande.*

*Commentez les proverbes: A chacun son métier; on ne se jette pas dans l'eau de peur de la pluie.*

In any case the feeling is growing up that it is better to confine all Bearbeitung of a linguistic character to special linguistic readers, as this kind of work is inclined to damp literary ardour. We make an exception of course in favour of *questionnaires* and free compositions on the subject matter.

D. L. Buffum: *STORIES FROM BALZAC* (Henry Holt and Company. Bell and Sons, 4s. 6d.).

The stories are *Le Colonel Chabert*, *Gobseck*, *La Maison du Chat qui Pelote*, *Pierre Grasson*, *La Bourse*.

In the vocabulary the editor has noted here and there a fact of pronunciation. We are grateful for this, but hope the time is not distant when every vocabulary will have a phonetic transcription of every word.

We were rather surprised to find in the preface the expression "The substitution (sic) of the older diæresis by (sic) the modern grave accent." Is this an Americanism? An interesting fact for anyone studying the development of new locutions is the fact that Mr. H. E. Palmer in his "100 Substitution Tables" speaks of "substituting words by others of the same grammatical family."

W. H. Hudson: *VICTOR HUGO AND HIS POETRY* (Harrap).

The really beautiful, jet-black print makes a most delightful setting for the large selections of Hugo's verse of which this book is chiefly composed.

ALMANACH HACHETTE, PETITE ENCYCLOPÉDIE POPULAIRE DE LA VIE PRATIQUE. (Hachette et Cie.).

Might prove very useful as a basis for conversations in French, as it is full of pictures, advertisements and texts on every conceivable subject, even including the war.

MODERN LANGUAGE REVIEW: January, 1919.

Full of fascinating philological matter. But the only modern language article is an admirable list of German war-words with their meanings.

MODERN LANGUAGE TEACHING: February and March numbers, 1919.

Both contain many interesting articles. The March number has an interesting suggestion for the adoption of a simplified French spelling in beginners' texts instead of a phonetic script.

F. A. Hedgcock and Henri Luguët: *A MATRICULATION FRENCH FREE COMPOSITION*. (Bell and Sons, 2s. 6d.).

We do not deny that examinations are necessary; we will not even call them necessary evils. For all that we do not think any teacher should be so obsessed with the thought of them as to call a book by such a horrid name.

(Continued on page 280.)

# TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, 29th February, 1912.)

---

## OFFICIAL LIST

OF

## REGISTERED TEACHERS

---

The Statutory duty of the Council is to frame and keep a Register of Teachers, and a list of those registered under the conditions prescribed by the Council will be published from time to time. The first list was issued in 1917, and the second one is now in course of preparation.

In addition to its statutory duty, the Council has acted in co-operation with the Board of Education in many important matters affecting the interests of Teachers.

Up to and including the 2nd of July, 1919, the number of applications for admission to the Register was 28,441. All qualified Teachers who have not already registered should write at once to:—

THE SECRETARY,  
TEACHERS REGISTRATION COUNCIL,

47, BEDFORD SQUARE,

LONDON, W.C. 1.

The book is carefully prepared,—a reading piece, notes in French, questionnaire, sentences for translation from English into French, and lastly "sujets à développer."

Whether this will result in good *free* composition can only be decided by those who have tried the method. It is certainly worth trying. And for those who wish to make the experiment we recommend this very thoughtful book. But we are inclined to think that most learners will prove themselves tortoisises attempting the flight of eagles. Is it not better to ensure that our pupils can write fluently in ordinary simple French, and to leave the cultivation of a literary style, by imitation of fine writers, to the spontaneous efforts of those who discover a special bent for it?

F. V. Massard: FRENCH EXERCISES. (Rivingtons, 2s. 6d.).

These exercises are largely on "Direct" lines. The fact that the title conveys no indication of this fact speaks well for the publishers' confidence in the prevalence of progressive methods.

Daniel Jones: EXAMINATION PAPERS IN PHONETICS. (Oxford University Press, 2s. 6d. net).

A set of papers set for various examinations at different Universities.

### Mathematics.

THE ANALYTICAL GEOMETRY OF THE STRAIGHT LINE AND THE CIRCLE: by John Milne, M.A. (G. Bell and Sons, Ltd. 5s.)

This book is meant to be introductory to the more formal study of analytical geometry, and contains a full treatment of the straight line and the circle, with copious examples for practice. The author has made a successful attempt to show that the subject really deals with *geometry*; a fact which the abstruse analytical methods of the more advanced treatises is apt to disguise. To this end geometrical and graphical illustrations appear on nearly every page. We think in many cases the advantage would be increased if the drawings had been made to larger scale. Very numerous worked examples are included and with the true teacher's instinct the author approaches, many general theorems with simple preliminary numerical illustrations. All this is excellent and perhaps necessary for beginners, but sometimes amid the maze of illustrative and explanatory matter we sigh for the simple beauty and terse statement of some of the older books, such as Charles Smith's "Conics." It may be that the necessity for such a wealth of expository matter as Mr. Milne gives us arises from the mistake of attempting to teach the subject *too soon* in the school life of the average pupil.

Yet the book generally can be recommended. The treatment of pencils of lines, systems of circles, radical axes, and poles and polars is able and comprehensive. In the earlier part it is somewhat strange to find the perpendicular distance of a point from a line treated before the perpendicular form of the equation to a line, while throughout we find but little use made of the artifice of "changing axes." But these are details in a successful book.

S. RULE.

### Science.

THE KINGSWAY SERIES.

THE BOOK OF NATURE STORIES: by Joan Kennedy. (Evans Bros. Ltd.)

The stories in this volume are arranged in three parts to correspond with the lessons in "The Teacher's Book of Nature Study" issued by the same publishers. Miss Kennedy has an attractive style and has compiled some fascinating nature stories. We presume that she intends the stories to be read or to be told by the teacher, since the language is somewhat difficult for children's reading. The vague subject of Nature Study is approached from many sides in the course of over one hundred stories. The enthusiastic teacher should find this book a very real help.

X.

### General.

THE IMPERIAL STUDIES SERIES.

THE SEA COMMONWEALTH AND OTHER PAPERS: edited by A. P. NEWTON. (J. M. Dent and Sons, Ltd. 3s. 6d. net.)

The six papers contained in this book were originally delivered as lectures in an Imperial Studies course at King's College, London, during the session 1917-18.

Though already, with the passing of the war, a little behind date, all the essays bear the stamp of authority and expert knowledge. Sir Julian Corbett deals with our Empire as the Sea Commonwealth and indicates the importance and the difficulty of the Mastery of the Seas for us. He seems, however, somewhat unnecessarily lugubrious over the possibility of restricted Free Trade and the partial closing of the Open Door. In an essay on the French Colonies Professor Paul Mantoux proves convincingly that France is a successful colonising power, while the Colonial aspirations of Germany are ably dealt with by J. E. Mackenzie in a paper written shortly before his death. For the rest we have Professor Pollard on the Monroe Doctrine, Sir Harry Johnstone on the Development of Africa, and Basil Thomson on the Problems of the Pacific. All the essays will provoke thought and discussion, and the whole Imperial Studies Series deserves to be better known. Its books can be recommended to all who are interested in the larger Imperial Politics.

FELIX.

THE KINGSWAY SERIES.

1,000 QUESTIONS IN GENERAL KNOWLEDGE: by Henry Smith. (Evans Bros., Ltd.)

We are at a loss to understand the purpose of this volume. We presume it is intended for teachers, but we refuse to believe that the compiler wishes to encourage the class teacher in the blatant and unpardonable hypocrisy of dealing out these "posers" to unsuspecting pupils who do not know that the teacher possesses the "Answer Book." This is to reduce knowledge to the merest tit-bits and teaching to the mightiest humbug. Surely, surely, Mr. Smith himself does not pretend to be an authority on the "fifty specific branches of knowledge" treated in the book. A glance at the Questions and Answers themselves will convince readers of the superficial nature of the book in general. Out of a thousand we have space for but a few.

What are the gases of which air is composed?

What is meant by the Hinckes Bird's method of ventilation?

What is meant by L.B.W., a "Yorker," "Stonewalling"?

How far is the sun from us?

Suppose the forests of the Amazon cut down: what effect would this have on the climate of the region?

Why does a dog turn round before it lies down?

What happens to a ship when she is relieved of her cargo?

When selecting a garment, what points should be borne in mind?

What do you know of the Black Rod?

Name any dangerous practices often followed by people in the street.

The "answers" are a similar medley of trite generalities and superficialities. Thus to the question "Why are pillar boxes painted red?" the answer is "So that they may be easily seen." We might ask the author how the colour would help a searcher on a dark night.

X.

A PENSIONS GUIDE.

Teachers and others who have not the leisure necessary to obtain a complete master of the terms of the Superannuation Act, with its Statutory Rules and Orders, cannot do better than obtain a copy of an excellent pamphlet which has lately been published by Messrs. Evans Bros., Montague House, Russell Square, London, W.C. 1., at the modest price of 1s. or post free 1s. 2d. The author is Mr. E. H. Allen, Editor of *The Teachers' World*, and in his exposition of the new Act Mr. Allen brings to the task a rare ability in clear statement, fortified by an intimate knowledge of the Rules, based on official information. A valuable feature of the book is a section containing questions on points of difficulty, with the correct answers.

## BLACKIE & SON'S NEW LIST.

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

### The Groundwork of British History.

By **GEORGE TOWNSEND WARNER, M.A.**, sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c.; and **C. H. K. MARTEN, M.A.**, Balliol College, Oxford; Assistant Master at Eton College. With Maps, Time Charts, and Full Index. 764 pp., super-crown 8vo. 7s. 6d. net. Complete in One Volume.

In Two Parts, 4s. 6d. each net. Part I, 55 b.c.—1603; Part II, 1603—1911.

For the convenience of those requiring the book for certain examinations it is also issued—

In Three Sections, 3s. 6d. each net:—Section I, 55 b.c.—A.D. 1485; Section II, 1485—1714; Section III, 1714—1911.

#### A NEW GRAMMAR BOOK

By **AGNES CATNACH, B.A.** (Lond.), Assistant Mistress at King Edward's Girls' High School, Birmingham. 2s. 6d. net.

This book seeks to connect more closely the formal study of language with adequate expression of thought, and to attain this end all the work is based on the study of the sentence. It is hoped that to children studying on these lines English Grammar will be a subject of living interest, and that the various facts of grammar will gain that logical connection which they so often seem to lack. The matter has been set forth as simply as possible, and in a manner to retain the interest of the pupil.

#### SOME PRACTICAL HINTS FOR THE YOUTHFUL HISTORIAN.

By **C. H. K. MARTEN, M.A.**, Balliol College, Oxford, Assistant Master at Eton College. 3d. net.

N.B.—The above is No 1 of a Series entitled "Aids to the Study of History."

#### THE GOLDEN BOOKS OF ENGLISH VERSE.

A Graduated Course for Class Study. Arranged by **FRANK JONES, B.A.**, Senior English Master, King Edward's School, Aston, Birmingham. In Three Books. Book II, now ready. 2s. net. Books I and III in preparation.

The chief feature of this series is the teaching apparatus provided at the end of each poem. The objects kept in view in drawing up these aids have been to save the teachers' time, and to provide the pupils with an instrument by which they might test the thoroughness or otherwise of their understanding of the poem studied. Each teacher will no doubt supplement them as necessity arises; and to the pupils who have studied a poem in order to answer the questions asked, the aids will suggest other points for further consideration with the help of the teacher.

#### A BOOK OF ENGLISH HISTORY FOR CHILDREN. Part I.

By **LILIAS MILROY**, Head Mistress of the Leamington High School for Girls, and **ELIZABETH M. BROWNE**, Formerly Assistant Mistress in the Truro High School for Girls. 2s. 6d. net.

This history book seeks to steer a course between those mere "outlines," which are bound to be lacking in interest for young children, and the books of stories from history, often delightful to the readers, but apt to be rather too bulky for use as textbooks. The aim of the authors has been to select carefully the more important movements and the more picturesque incidents of history, and in connection with these to give those ample details which children love, and at the same time to preserve a clear chronological sequence.

#### A RAPID SURVEY OF ENGLISH LITERATURE.

By **E. H. BLAKENEY, M.A.**, Winchester College. 2s. net.

"A wonderfully comprehensive selection of brief characteristic extracts, with notes of the times and peculiarities of the writers, and will be found a very interesting book."—*GUARDIAN*.

#### ENGLISH PROSE EXTRACTS FOR REPETITION.

Selected and edited by **E. H. BLAKENEY, M.A.** 9d. net.

"Mr. Blakeney has done very useful work in producing this little book of prose extracts, fine examples of prose for the use of schools. Extracts from writers such as Gibbon, Scott, Matthew Arnold, Shorthouse, Pater, George Meredith, Ruskin, and some quite recent writers are brought together."—*TIMES*.

A NEW SERIES OF FRENCH HISTORICAL READINGS FROM ORIGINAL SOURCES.

### Épisodes Mémorables de L'Histoire de France.

General Editor: **LOUIS A. BARBE, B.A.**, Officier d'Académie.

**PRISE DE LA BASTILLE**, from Michelet's *Histoire de France*.

**LA ROUTE DE VARENNES**

**LES FRANÇAIS A LA 1<sup>re</sup> CROISADE**,

STRONGLY BOUND IN LIMP CLOTH PRICE 9d. EACH.

#### BLACKIE'S LONGER FRENCH TEXTS.

From Modern French Literature. Printed in large, clear type, with brief Notes, Exercises, Phrase List, and Vocabulary. Fcap. 8vo, 10d. each net.

#### COURS DE FRANÇAIS, d'après les Textes

By **M. ANCEAU** and **E. MAGÉE**, Edgbaston High School for Girls, Birmingham. Cloth boards, 2s. 6d. net.

#### A SKELETON FRENCH GRAMMAR.

By Professor **ATKINS, M.A.**, King's College, London. The "irreducible minimum" printed in red and black. 2s. net. With Exercises, 2s. 6d. net. Exercises only, 1s. 6d.

#### A JUNIOR FRENCH COURSE (First Year).

By **E. J. A. GROVES, Lic. 8s L.** (Senior French Master, Bradford Grammar School). Fully illustrated. Cloth extra. 2s. 6d. net.

#### BLACKIE'S LITTLE FRENCH CLASSICS.

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo. 6d. each.

#### LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By **E. MAGÉE**, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other Illustrations. Fcap. 4to. 2s. 6d.

#### LE LIVRE BLEU.

A second Book of French in Coloured Pictures. By **E. MAGÉE**. With sixteen full-page Coloured Pictures and many other Illustrations. 2s. 6d.

#### RECENT IMPORTANT BOOKS FOR THE STUDY OF ITALIAN.

By **ERNESTO GRILLO, M.A., LL.D., D.C.L.**, Professor of Italian Language and Literature in the University of Glasgow.

#### A NEW ITALIAN GRAMMAR.

For the use of Schools, Commercial Colleges, and Universities. 8vo, cloth, 6s. net.

A systematic course of instruction in grammar and in the elementary principles of composition.

## THE TEACHERS REGISTRATION COUNCIL.

Representative of the Teaching Profession.  
Constituted by Order in Council  
29th Feb., 1912.

The Council maintains an Official Register of Teachers who have been accepted for admission under the Conditions of Registration.

The Register is open to qualified teachers in every branch, and until the end of 1920 experience under approved conditions is the sole qualification required. After that date the conditions will become more stringent.

Particulars and Forms of Application may be obtained from

THE SECRETARY,  
Teachers Registration Council,  
47, Bedford Square,  
London, W.C. 1.

## THE COLLEGE OF PRECEPTORS.

Incorporated by Royal Charter.

BLOOMSBURY SQUARE, LONDON, W.C. 1.

### LECTURES FOR TEACHERS.

A Course of Twelve Lectures on "Problems of the Practical Teacher," by Professor John Adams, will begin on Thursday, the 25th of September, at 6 p.m. The Syllabus will be ready for issue on the 1st of September.

### MEMBERSHIP.

Membership of the College is open, under certain conditions, to persons engaged in education. Particulars concerning the privileges of membership may be obtained from the Secretary.

### EXAMINATIONS.

The College of Preceptors holds Examinations of teachers for the Diplomas of A.C.P., L.C.P., and F.C.P., and Examinations of students who desire to satisfy the preliminary requirements of the Law Society, the General Medical Council, the Pharmaceutical Society and other Bodies. The Regulations may be obtained from the Secretary.

## THIS ISSUE CONTAINS :

Essays on Holiday  
Books, Nail-Brushes,  
Children's Verse,  
Camps and Tours,  
A Poem by C. E. B.,  
and  
Reviews of Books for  
the Holidays.

## LONDON UNIVERSITY EXAMINATIONS.

During the last fifteen years  
6,940 U.C.C. STUDENTS

have passed the  
INTERMEDIATE AND DEGREE

Examinations of  
LONDON UNIVERSITY

in addition to gaining  
5,207 Successes at Matriculation.

Prospectus of Classes for London University Examinations, post free to PRIVATE STUDENTS from—

THE SECRETARY,  
University Correspondence College,  
No. 15, BURLINGTON HOUSE, CAMBRIDGE.

## THE ASSOCIATED BOARD OF THE R.A.M. AND R.C.M.

FOR LOCAL EXAMINATIONS IN MUSIC.

Patron: HIS MAJESTY THE KING.

President: H.R.H. THE PRINCE OF WALES, K.G.

LOCAL CENTRE EXAMINATIONS (Syllabus A).  
Examinations in Theory held in March and November at all Centres. In Practical Subjects in March—April at all Centres, and in the London District and certain Provincial Centres in November—December also. Entries for the November—December Examinations close Wednesday, October 15th, 1919.

SCHOOL EXAMINATIONS (Syllabus B).

Held throughout the British Isles three times a year, viz., October—November, March—April, and June—July. Entries for the October—November Examinations close Wednesday, October 8th, 1919.

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 6d. per set, per year, post free.

The Board offers annually SIX EXHIBITIONS, tenable at the R.A.M. or R.C.M. for two or three years.

Syllabuses A and B for 1919 or for 1920, entry forms and any further information will be sent post free on application to—

JAMES MUIR, Secretary,

14 and 15, Bedford Square, London, W.C. 1

Telegrams: "Associa, London."

## THE INCORPORATED SOCIETY OF MUSICIANS.

Founded 1882. Incorporated 1892.

### OBJECTS OF THE SOCIETY.

The objects for which the Society is established are the promotion of whatever may tend to the elevation of the status, and the improvement of the qualifications, of all Members of the Musical Profession, or may aid the musical education of the people.

### ADVANTAGE OF MEMBERSHIP.

A Benevolent Fund for Members, the Regulations for which have purposely been made as wide as possible in order to meet the many and very varying contingencies which arise from time to time.

An Orphan Fund for the children of musicians which is open to the dependents of all musicians, whether their parents were members of the Society or not.

Legal advice on all professional matters; Income Tax Claims; Copyright; The Recovery of Fees, &c. Registers open to members of "Vacant Appointments" and "Engagements," and for the transfer from member to member of pupils moving to new districts.

### LOCAL EXAMINATIONS IN MUSIC.

The examinations of the Society, established in 1884, are carefully arranged in a systematic series of Progressive Grades, embracing a complete course of musical study, and constitute a most valuable guide for Teachers in recording the progress of their pupils.

Full particulars may be obtained upon application to the GENERAL SECRETARY, 19, BERNERS STREET, W. 1

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Bedford, Belfast, Birmingham, Blackburn, Brighton, Bristol, Cambridge, Cardiff, Croydon, Dublin, Edinburgh, Exeter, Glasgow, Hull, Leeds, Liverpool, London, Manchester, Middlesbrough, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, Plymouth, St. Andrews, Sheffield, Southampton, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

### LANTERN LECTURES

BY A UNIVERSITY MAN,

ON BRITISH EMPIRE SUBJECTS.

Shakespeare, Dickens, Travels, etc.

For syllabus apply to Agent:

WILLIAM R. JONES,

64 Wrentham Avenue, London, N.W.10

## DUSTLESS AND HYGIENIC SCHOOLS.

On all

School, Laboratory, Library, &c., Floors and Linoleums of every description

USE

# FLO RIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

(British owned).

EARLY in the SUMMER VACATION for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the ROYAL SANITARY INSTITUTE, and is strongly recommended by Medical and other expert authorities.

It costs little, saves labour, and is easily applied by the unskilled. Not sticky—the ordinary daily dry sweeping alone required.

#### IT IS IMPORTANT to NOTE that

**ONE APPLICATION** of "Florigene" effectively allays the dust and dirt for **2 to 12 months**, according to the traffic, not only **during each sweeping** (without sprinkling of any kind), but **also throughout all the intervening periods**—which is even of **greater hygienic importance.**

"Florigene" has been continuously used for many years on the floors of The Royal Colleges and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies.

Send for Medical Reports and Testimonials to the Sole Manufacturers—

## THE "DUST-ALLAYER" CO.

4, Vernon Place, Bloomsbury Square, London, W.C.1.

Contractors to Admiralty, War Office, H.M. Office of Works, India Office, L.C.C., &c.

## SCHOLASTIC APPOINTMENTS

University Men and Women seeking scholastic appointments should apply to

### **Truman & Knightley** —SCHOLASTIC AGENTS—LTD—

who introduce ASSISTANT MASTERS AND MISTRESSES to the majority of the leading Public and Private Schools at home and abroad.

*Through this Agency, well educated gentlemen with Higher Local and other good Certificates, interested in children and in teaching, can find congenial work in good high-class Private Schools, where the hours are not excessive, conditions pleasant, and the holidays are long. Salaries range from £50 to £100 or more per annum, with board and residence, according to age, qualifications, and experience. There are also many vacancies for Student and Junior Mistresses at salaries of from £30 to £50 per annum with board and residence.*

There is a separate department for

### **LADY MATRONS and HOUSEKEEPERS**

for Schools.

No charge for registration.

::

Moderate commission.

#### **SCHOOLS TRANSFER DEPARTMENT.**

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

## NOTES AND COMMENTS.

### Holidays—Plus.

The King has made known his desire that this year of peace shall be celebrated in our schools by an extension of the annual holidays. Many schools have acquiesced with loyal promptitude, although in one district the Local Education Committee have decided that they must ignore the Royal wish, since their schools have already been closed by reason of an epidemic of measles or influenza. The fortunate youngsters in this locality, having already made libations to the Spirit of Peace in doses of saffron tea or cough mixture, will now be held to have done their part in the celebrations. Some earnest-minded people are writing to the newspapers to complain of the extended holiday and to enquire what is to become of a nation when its young folks spend a quarter of the year in idleness. This note of lofty patriotism harmonises imperfectly with the somewhat querulous demand of one correspondent who seeks information as to whether the school fees for the autumn term will be reduced, or with the suggestion of another that the extra holiday is instigated by schoolmasters, who are apparently already overburdened with leisure. These criticisms are surprising in view of the fact that during the later years of the war our school children gave up a great part of their holidays to various forms of war work, that school fees are almost the sole item of a family budget which remains at or about the pre-war level, and that throughout the war those responsible for our schools have been working at extra pressure owing to the absence of colleagues engaged elsewhere in defending the homes of these genial critics.

\* \* \* \* \*

### Oxford and Cambridge.

Thirty years ago it was held to be a proper and decorous thing to avoid any sudden use of the words "Royal Commission" in Oxford and Cambridge. The reason was that they might be overheard by some aged Don who had poignant memories of University Commissions and their results. It was sheer cruelty to recall these unhappy things, and those who had done so inadvertently were said to have caused the untimely death of senior and senile Fellows of Colleges and Heads of Houses. It is to be hoped that these enfeebled and timid spirits are now removed beyond the sphere of Royal Commissions, for the Universities of Oxford and Cambridge are to be once more probed and harrowed by questions. The names of the Commissioners were not disclosed when it was announced that an enquiry would be set on foot, but it may be assumed that there will be an adequate representation of working-class opinion. It is evident that working-class organisations are under the fixed impression that Oxford and Cambridge are seed-plots of class distinction and capitalistic domination. They believe that these Universities have been captured from the poor by the rich, and the "crime" is a favourite theme for denunciation by forceful orators at Labour meetings.

### The Salaries Question.

Our Primary School Correspondent gives a list of nine districts in which "strikes" of teachers appear to be likely. The Board of Education have intervened to the extent of calling together the Executive of the National Union of Teachers and representatives of Local Education Authorities in order to form a permanent body which is to keep the salaries question under review. The proposal has been adopted, and it is rumoured that a similar committee will presently be set up for the purpose of dealing with salaries in secondary schools and higher institutions. The scheme so far seems to be to have a committee on the lines of the Departmental Committees on Salaries, sitting as a Standing Joint Committee, with a neutral chairman and equal numbers of representatives of the N.U.T. and of the Local Authorities. Mr. Fisher describes the plan as provisional, and it will probably be seen that he is describing it correctly. The N.U.T. is certainly the most powerful organisation of teachers, but on at least one important point connected with salaries it is not regarded as "sound." Many women teachers who desire "equal pay" are by no means satisfied that their policy will be properly advocated by the N.U.T. On the other side of the table the representatives of Local Authorities, especially those from the County Councils, are inclined to hold aloof from the Association of Education Committees. It is provided that no resolution of the Committee shall be valid unless it is accepted by a majority of each side, a stipulation which hardly encourages the belief that many resolutions will be carried. It is difficult to see how the salaries question is ever to be settled on a sectional basis. The chief factor in determining a teacher's salary should not be the kind of school in which he is working, but his efficiency, qualifications, and experience.

\* \* \* \* \*

### The Science of Teaching.

In an obituary notice concerning the late Mr. J. R. Broadhurst, of Manchester Grammar School, one of our newspapers states that "he was distrustful of the science of teaching, though the art was certainly his." While agreeing with this tribute and accepting the fact that Mr. Broadhurst was a great teacher, we may point out that a national system of education cannot thrive on the efforts of the comparatively small number of men and women who can exercise the art or craft of a teacher in complete ignorance of the principles which underlie it. It is true that the claims of "pedagogy" as a science are often absurdly overrated, but it is also true that we have suffered greatly from the neglect of educational principles in our schools and universities. Where principles are not held in regard the teacher tends to rely upon rule of thumb or a half-forgotten memory of his own schooldays. At best he seeks to copy the methods of another teacher or to follow the advice of a headmaster or inspector. Such practices are fatal to real efficiency, for teaching is an individual craft, and the value of a study of principles is that it will release the individuality of the teacher, giving him material for the justification of his own practice and saving him from the bondage of empiricism or the lure of every new and specious doctrine. It is true that a rigid and unintelligent following of "rules of method" will be fatal to good work. There are no rules of method which are applicable at all times, in all circumstances, and by every teacher.

### The Girton Celebrations.

The jubilee of Girton College was duly celebrated at Cambridge, when there was a notable gathering of former students. The occasion may suggest to the University Commission the desirability of urging that women should now be admitted to degrees at Oxford and Cambridge. At the Girton re-union there were present distinguished women scholars who have justified to the fullest extent the promise they showed as students and have brought honour to Cambridge. Nevertheless they do not rank as Cambridge graduates. Such churlish exclusion is absurd when it is applied to women of the type of Mrs. Hertha Ayrton, the only woman member of the Institution of Electrical Engineers; to Miss Charlotte Scott, now of Bryn Mawr College, Pennsylvania, who was Eighth Wrangler in 1880; to Mrs. Arthur Strong, Director of the British School of Archæology in Rome; to Miss Adelaide Anderson, Principal Woman Inspector of Factories; to Miss Frances H. Durham, Chief Woman Inspector of Labour Exchanges; or to Mrs. Montagu Butler, who, as Miss Ramsay, was placed alone in the first division of the first class of her year. This list might be extended indefinitely, for there is a wealth of proof that the women students at Cambridge have not only acquitted themselves well during their college career, but have also justified to the full their claim to be admitted to University degrees.

### Shades of the Prison House.

"N.F." writes:—

He was the third boy in the second row of scholarship candidates.

From the crown of his perfectly-parted hair to the toes of his superlatively shining boots his personality spoke. To the most casual observer it was evident that he meant to get from log cabin to White House in record time.

The irritating eccentricities of the Maths. paper brought him up sharply against his first fence. The gleaming concentration of his eyes wavered, and little puckers marred his boyish brow.

But Hope—that hardy annual of the emotions—bloomed anew with Nature Study.

The third question—"State what you know about the coltsfoot?"—darted at him like a streak of lightning from the paper. His hot young cheeks grew hotter. What did he not know about the coltsfoot? The foot of the untamed mustang that roamed with flowing mane the pathless prairies of the West! Ha-ha! What he didn't know about the coltsfoot wasn't worth putting down.

Now he *was* getting on.

"The colt's foot," he began with laborious attention to detail, "is smaller than that of the full-grown horse, and leaves a lighter mark on the soil. This is important when you are being tracked and are in danger of —" Here the mundane objects of the class room faded into the limbo of forgotten things, and, bending low on the back of Thunderbolt, his young black stallion, with the keen wind of the prairie whistling in front of him and the keen arrows of bloodthirsty foes whistling behind, he galloped through a crowded five minutes of glorious life.

Judged by the mere sordid calculating of marks, Thunderbolt left our hero rather badly among the "alsos."

But did he—really? Ask Peter Pan.

**Westminster School and Bottled Beer.**

The historic Westminster pancake can be washed down with an appropriate beverage. In Tudor times one Alexander Nowell was headmaster of Westminster and a staunch Protestant. On the accession of Queen Mary he retired to a country house in Lancashire. One morning he went out to fish, taking with him his lunch and a bottle of ale. Emissaries from London arrived to arrest him, and Nowell fled in haste, leaving his lunch behind. Eventually he reached Holland, but on Mary's death he returned to England, and near his favourite trout stream he discovered one day the bottle of ale which he had left six years before. Cautiously tasting the contents, he found them more excellent than any ale he had ever known. Bottled beer had been discovered, and that same night Nowell filled every empty jar and bottle in his house with ale, carefully corking them and placing them in the cellar. Should Westminster School ever need further endowments, it has a claim on certain wealthy firms which have amassed great fortunes through the chance discovery by its former headmaster.

**THE TYRANT.**

Tell me, who is this supinely lying  
On the sun-baked sand—  
Or, it may be, casually shying  
From an idle hand,  
At the bidding of an infant daughter,  
Stones that plonk into the rising water  
Rippling o'er the strand ?

Can it be indeed that dreaded tyrant,  
He whose words of flame  
Scorched and shrivelled up the young aspirant  
Keen for classic fame,  
He before whose scorn the fifth form quivered  
And the very bloods have stood and shivered ?  
Yes, it is the same.

Now, indeed, a little child may lead him  
(As full well she knows) ;  
Little rest his captor will concede him,  
And she plainly shows,  
Whether building forts or catching fishes,  
That her absolute and royal wishes  
Nothing may oppose.

Would that here his form could gather round him,  
By the flowing tide,  
Since his term-time subjects, having found him  
Flouted and defied,  
Haply might perceive their former error  
And admit that he, the Holy Terror,  
Has his human side.

C.E.B.

A new volume, by Mr. E. H. Chapman, will shortly be added to the Cambridge Nature Study Series, published by the Cambridge University Press. The title is *THE STUDY OF THE WEATHER*, and the aim of the book is to provide not only a series of practical exercises on weather study, but a simple introduction to the study of modern meteorology.

**THE PLAY WAY IN LANCASHIRE.**

BY B. A. WILMOTT.

## II.—VERSE.

IN my article on Prose I spoke of the difficulty found in overcoming materialism in order to introduce the Play Way to a Lancashire class ; with Verse I felt at a loss. So concentrating on prose, I used up what remained of the lesson in reading with the children their favourite poems, pointing out rhythm and rhyme, and getting them to criticise what they liked or perhaps disliked in each. But when I suggested they might write a poem as an alternative to the prose homework, they naturally said they did not know the way, and though I told them to imitate some poem they knew by heart ; this was the sole product :—

I love to watch the feathery flakes  
Go flying round and round,  
And up and down, and up again,  
Before they reach the ground.

It warms the earth in winter,  
And shields the blades of grass,  
The little flowers so tender,  
Till Spring returns again.

So the last twenty minutes of our next lesson we spent in composing a poem together. First we chose *subject*—“The Lake” ; then “*thoughts*” (which we jotted on the board, so—mountains, forests, flowers, streams, ripples, sunbeams, sky, river, even fishes) ; then *rhymes* to fit in with these thoughts (“hills” and “rills” soon came, then, after a pause, the “bed” of the river and the “head” of the mountain)—all in less than ten minutes, leaving ample time for everyone to compose just four lines on those rhymes then and there. Soon : “Can we go on when we've done four ?”

Unwise it perhaps was to run prose and verse together into one homework, but how could I retract ? Naturally some did fair poems, some did fair proses, most spoilt both. Yet note a sense of diction and form here :

Soft moonlight on the lake,  
And the silvery ripples break  
Upon the shore ;  
The snowy mountains rise  
Below the darkling skies  
At heaven's door.

And here just a hint at onomatopœia and alliteration :

The sun was gleaming o'er the pines,  
And right high stood the mountain head,  
Gleaming o'er the fruitful vines  
On to the lake's cool, crystal bed.

The yellow daffodils knelt—  
Seemingly at their ease,  
And the coarse bulrushes  
Stood swaying in the breeze.

The birds in merry flight,  
Whistling a carol gay,  
Whistling in the dusky light,  
Sang till close of day.

Finally a wee shy girl came to me and said : “Please, I didn't do the homework ; I did this instead. Will it do ?” Will it, reader ? Here it is :

The wind went frolicking one summer's day,  
Over the hills and far away.

Now through the wood he rushes,  
Now over bank, briar, and bushes.  
What he is after we do not know.  
Perhaps he goes to the realms of snow,  
Or off to the sun in his glory.

He comes with the frost  
When Autumn is lost,  
And Winter reigns in her stead.  
When snow is thick upon the ground,  
His breath is felt by all around.

He comes so fast that his stormy blast  
Freezes the tips of our fingers ;  
He listens by the open door,  
And by our house he lingers,  
As if to break our strongest wall,  
And then with a rush upon us to fall.

Now I here intend neither to praise nor to dispraise what I quote—that is for you to do, reader—though it were well to say that with the child I always praise first and then criticise, and so impress that once the faults are eliminated the poem will not be half bad ; but may I forewarn you that though you, blasé reader, have grown so familiar with the charms of nature as to feel them commonplace, to the child they are all freshly felt. Can you then regard a child's work with the freshness of a child, listening for beauty, not art ?

It was next Monday morning the prose caught fire, and all the children's sense of beauty, all their soul, was gushing forth in description of the glories of Nature ; so it was but natural that, when I called for a subject for a poem that same afternoon, they should choose "Sunset," and half cover the board with such jottings as : stillness, red-rose-rainbow, rays-glimmer, coolness, fragrance, mist-dew, owls, bats, mice, crickets, fields hide away, moon, stars, slow, dignity, splendid, steady : all of which I trust is intelligible ! This time they were to choose their own rhymes ; but, alas ! as they did so aloud, there is lamentable plagiarism and monotony in the resultant poems, which makes just appreciation difficult. For instance, this :

The sun is sinking in the west,  
The hour that I love the best,  
When children cease their fun,  
And I find day is done.  
The birds have ceased their twitter,  
The sun is all in a glitter—  
It is like a crimson ball,  
• Still shining over all.

sounds perhaps passable until one sees this :

At the closing of the day,  
When the children cease their play  
And look towards the west  
Where the sun has gone to rest,  
Leaving hues of colour in the sky ;  
Under the eaves the birds do twitter,  
Round by the barns the owls do flutter,  
On the grass the moonbeams glitter,  
And the fairies skip along.  
Here comes the glow-worm, carrying a light,  
To serve as a friend throughout the dark night.  
The church on the hill  
Stands solemn and still  
In the darkness that lies around.  
And now to bed  
To rest the head  
Upon a downy pillow, snowy white,  
To rest till dawn and morning light.

(*Rallentando.*)

Once we tried nursery rhymes, and though they failed, in the main, we did find one or two jolly things—and here's that rhyme again :

I'm a little puppy,  
Just having lots of fun ;  
I've eaten Frankie's supper,  
And stolen Charlie's bun.  
And when my mistress finds me,  
And sees what I have done,  
She'll chase me round the table  
For eating Charlie's bun.

From a prose dialogue between the frog who would a wooing go and the fond mother who would not let him, sprang a superb Æsopic drama of a frog who went round to everybody looking for a nice "dinner" and found none. It starts and ends thus—would I could print all ten verses !—

1. A foolish little frog  
Who was sitting on a log,  
Said "What's for dinner to-day ?"  
His mother said "Stew,"  
So the frog said "Pooh !"  
And he sailed and sailed away.
9. He came to the nest,  
And there he confessed  
He had had no dinner that day.  
His mother said "Dear me !  
You must wait till tea,  
For I gave your share away."

—and then a moral. At first I thought this too good to be his own, but I believe it is, as he says it took him a whole week to do.

One week it took all my efforts to stem a sudden tide of fairy poems ; but they soon saw the folly of inventing beautiful things that do not exist while there is so much beauty in the real world to describe. When a poem opening thus—

When the day did break  
And the golden sun shone forth with rapture keen—  
—goes on to fairy twaddle, one is disappointed.

Oh ! but a term soon goes. What with influenza and terminals, I had but eight weeks for experiment in prose, verse, and self-government. Some had to be abandoned just for lack of time for thorough treatment. Ballads last term simply failed—nothing happened ; this term we had time to drink in the atmosphere of Sir Patrick Spens and The Gay Goshawk, and discuss the sort of stories that make ballads, and behold !

1. One day, in a far-off bygone time,  
A knight came o'er the sea :  
"I come in quest of a lady fair  
To ride away wi' me.
- 2 "She must have bright golden hair  
And eyes that twinkle bright,  
And a' bright must this bonny maid be  
To ride away by night."
- 3 Through a dark forest this brave knight rode,  
And came to a palace fair ;  
And as he rode to the iron gate  
He saw a lady there.
1. "She is the vision of my dreams,  
But her eyes are full of tears.  
Ah, dry those tears, my pretty maid,  
And I will calm thy fears."

I tried one day to draw serious poetry from them ; it failed, yet here, in a Spring poem, are some extraordinary lines, her own, I hope—I have never yet detected conscious plagiarism :

When the keen frosts are o'er  
I will sit at an open door,  
Not afraid of a treacherous chill,  
But listen to the linnet's trill. . . .  
To old and young, to rich and poor,  
Thou gavest by thy hand thy store.  
Nor mines of gold nor jewelry rare  
With thy green grass can we compare.

The greatest disappointment was blank verse, which failed just because I had no time to concentrate upon it, to steep them in Shakespeare, Milton, Tennyson ; for metre, apart from rhythm, the foot as opposed to the beat, and, above all, regularity, seemed incomprehensible to all but a few, owing, I think, to the Lancashire contempt for outward form ; and I had no time to dwell on it. This is what a child called blank verse :

Overlooking seas a palace  
Made of marble sculptured fine,  
With fountains murmuring melodies . . . .

This term we devote time to it, and succeed. " Last Speech of Becket," I ask, and get :

Why come ye here, O men, my life to take ?  
What wrong have I done in my young lord's sight ?  
If wrong I have done, gladly will I die.  
But, tell me, O ye men, why come ye here ?

From the hurried way I have touched now on one line, now on another, it must follow that not only must some of the experiments be left barren, but that those that take root must be largely left unrecaped. Yet it has been my aim rather to see whether things can be done with the children of the ill-bred, ignorant, and prejudiced, than to bring them to their highest fulfilment. Hence quality and quantity both suffer, and the choosing of samples is not easy, as they represent the absolute, not the potential achievement. In verse, again, the process of polishing off is exceeding slow, and, had I slackened to allow for it, I should never have arrived anywhere. But every now and then a gem is turned up at random—now a lyric, now a piece of fun, and ever and anon a playsong.

And for verse, whom do they read ? Well, beyond our " prose " books—Chaucer, Spenser, Homer, and Beowulf—I confess to no plan but that of the moment. When we do lyrics we may read the songs of Shakespeare, Shelley, Hogg, Tennyson ; when attempting " higher flights " we may sip Byron, Wordsworth. Read them one stanza, and they mostly interpret the rest perfectly. Temperament at first plays a large part, but appreciation soon becomes catholic after open criticism.

Had the Play Way no further educational value, its stimulus to appreciation would justify it. That richness of rhyme, that smoothness of rhythm, that blending of sounds, that nicety of diction, which to the uninitiated are empty nothings that pass unseen, these are now truly felt, seen with the inner eye. Poetry is no longer dead but liveth.

Is there a man with soul so dead that he can read the little rhymes I plant here in my essay like humble flowers, and still deny to his little folk the right, the opportunity, of saying :

" I too will something make,  
And joy in the making " ?

## NAIL-BRUSHES.

A CANTEEN is a place where a soldier can buy anything ranging between what he doesn't want and what he might conceivably need.

The things he wants are seldom there.

A contemporary dramatist might present a complete history of the canteens of his own time in dialogue, the alternate speakers being members of a long queue of combatant soldiers anywhere on the Palestine front and the " Class B " man in charge of the counter.

" Fags, please."

" Sorry, mate ; none till next Tuesday."

" Two packets of biscuits."

" Last we sold an hour ago."

" Any soap ? "

" Any soap left, Bill ? " (This to an invisible person, who roars an audible negative.)

" Haven't got a bit, chum."

" Two bottles of Worcester sauce and a tin of peaches."

" No peaches, mate . . . No, no sauce neither."

" How much are khaki shirts ? "

" Forty seven and a half piastres when we've got 'em ; but the Australians have cleared us out."

" Soldier's Friend ? "

" None in stock."

Imagine the general question to be : " Have you got what I want ? " and the general answer to follow : " Sorry, chum ; we're out. But we've got anything you don't require."

And further imagine every disappointed customer to say " Oh, hell ! " or " Oh, damn ! " in tones of vexed disappointment.

Thus you may figure for yourself, more plainly than a smudgy print in a daily newspaper can possibly do for you, exactly what a canteen is like.

Anybody who knows will tell you you weren't far wrong, either.

Occasionally, of course, a man's luck was in, and the canteen people had exactly what he wanted. And then, if he successfully bore up under the shock, and had the money with him, the happy soldier went home singing.

Meals of sardines and condensed milk, packets of cigarettes, and other godsend were sometimes obtained in this way.

There was once a corporal named Deacon who was very unlucky with regard to canteens.

Deacon, as a civilian, had taken up very seriously a certain course of performances that promised to make Deacon something more than a man. It was never perfectly clear to those who knew him whether he was to become a Superman, a Greek God, a Perfect Statue, or a Fitting Mate for Annette Kellerman.

Whatever his ambition was, to attain it it was necessary to wet the skin all over every morning with cold water, and to scrub hard with a nail brush.

Unsympathetic comrades pointed out to him that this Perfect System had for many years formed part of the regular toilet of mules, and had failed, so far as was known, to raise these creatures to any plane of semi-divinity.

Scoffing had no effect upon Deacon. He was one of those to whom a comfortable martyrdom is more stimulating than medicated wine. He scrubbed himself without ceasing until he lost his nail-brush at Kantara, and the sand hid it for ever.

The canteen people said that they were expecting a consignment of nail-brushes next Thursday week.

Deacon was in a terrible state, since he expected daily to be sent up the line. He was afraid, too, that if he missed a day of the Perfect System he might relapse into normal manhood, and fall to the low plane of other people.

His fears were well founded, for he went up the line long before the nail-brushes arrived. And for more than three months, though he enquired at every canteen that was anywhere near the places in which he camped, he had to go without a nail-brush.

"If I could only find a canteen with nail-brushes," said he, again and again, "I would buy up their stock. I will never be caught in this way again."

One morning, looking out from the spot at which his company had arrived on the previous night, he saw a large marquee, with a notice board in front bearing the word CANTEEN. Outside were twenty or thirty mules, harnessed to wagons; six or seven saddle horses; three box-cars; two ambulances; and three long queues—one of British soldiers, one of Egyptian labourers and military police, and one of Indians. Officers were gracefully lounging in and out of a separate entrance, sacred to them alone.

Deacon looked at all these signs of activity, and concluded that here at last was a well-stocked canteen. Perhaps—But oh! It would be too much to hope—Dared he hope . . . . .

He was able, just before mid-day, to join the now abbreviated queue. The canteen looked as forlorn and empty as a chateau in which a German Crown Prince had sojourned. His hopes sank, but he waited on, till patience and steady shuffling brought him to the counter.

"Got any nail-brushes?" he asked.

"Yes, chum; plenty."

He survived. He remembered his resolution to buy up the entire stock. He had fifty piastres with him.

"How many have you got?"

"About two hundred and fifty."

He changed his mind.

"Give me a dozen," said he.

He left the canteen with a sufficient stock of brushes and with fourteen piastres change.

He whistled all the way home. He was so happy that he did not grumble when he heard there was stew for dinner.

He packed eleven of the brushes squarely at the bottom of his valise, and the remaining one at the top of his haversack with his towel and soap. For the rest of the day he meditated upon the Perfect System: anticipation of the next morning made it all but impossible to sleep at night. He was awake long before the rest of the camp was stirring, and the rite was at an end before more than a dozen men were moving.

He burst into the tent, jumping up and down, swinging his arms across his chest like a London cabman, and ejaculating "Br-r-r-r!" Early mornings are chilly in Palestine.

One or two men only were curious enough to ask what the matter was. The others confined themselves to personal remarks.

"It's fine," said Corporal Deacon. "You fellows ought to try it. It makes a man for the day."

"Makes him a proper fool," growled Edser.

"Oh, hang it!" cried Deacon, suddenly ceasing eurhythmics.

"What's up now?"

"I've forgotten my nail-brush," said Deacon.

He was off like a shot to the spot where he had carried the bucket of water that morning. The canvas bucket was there, and the water; the latter by now highly camouflaged by Deacon's successors. But of the nail-brush there was no trace.

Deacon was very angry. The only modifying influence was the knowledge that he had eleven more.

On the way back he passed Sutton, actually cleaning his boots. The fact was remarkable enough to arrest anybody's attention, but Deacon's gaze was centred on the brush.

"Where did you get that, Sutton?" he asked.

"What?" asked Sutton, casually. "The polish? I borrowed that from Kerry."

"The brush, I mean."

"I've always had a brush," explained Sutton. "But it's so jolly hard to get polish."

He continued rubbing, unconcernedly.

"Look here," said Deacon, "I lost a brush this morning."

"Sorry to hear that, Corp.," said Sutton, in tones meant to be regretful. "What kind of brush was it?"

"It was a nail-brush," answered Deacon. "Just like that one you're using."

Sutton rose and looked hard at the brush, and then at Deacon.

"You mean I've got your brush. Well, if you think so, you'd better take it."

He held it out fiercely.

Deacon looked at it. Black polishing paste had been rubbed well into the bristles. It was useless as an aid to the Perfect System—unless to a Sudani or a Nigerian.

Deacon walked away.

The same afternoon he took from the bottom of his valise a second brush, and with a copying pencil inscribed a large D on the wooden back.

The next morning he found when he arrived at the part of the camp devoted to ablutions that he had brought no soap with him. He hastily wrapped the brush in his towel, laid it at the side of the bucket, and ran back to his tent. Quick as he was, somebody was quicker.

The brush had disappeared, and a stone was in its place.

He gave a quick look round. Nobody was in sight. He uttered an irrelevant exclamation—for which, though it was no part of the Perfect System, he may be forgiven—seized his soap and towel, and ran back for another brush.

He had finished his grooming, and was on his way back to the tent, when he saw Edwards holding a tunic and button stick. And Edwards—of all men!—was polishing his buttons.

"That's my brush," shouted Deacon.

"What's that, Corp.?" asked Edwards. "My button brush yours?"

"It's not a button brush," said Deacon; "it's my nail-brush."

"It's the brush I've used ever since we left England," retorted Edwards. "See for yourself, Corp." He held it out. "There's my name on the back."

Sure enough, the name Edwards was written on the back, with a violet copying pencil. It was written EDwarDs.

"That's not the way you write Edwards. That first D is mine."

"Look here, chaps," called Edwards through the doorway of his tent; "the corporal here says the D on my brush is his."

"Better let him take it off and keep it," came the prompt suggestion.

"I always make D's that way," replied Edwards. "I'll show you the envelope of my next letter home. You chaps remind me."

The occupants of the tent had come out in expectation of a row. Deacon turned on his heel.

"Wait a minute, Corp.," said Edwards. "It seems to me you're accusing me of stealing your brush. If you can prove it, you know what to do. What I want to say is, if you so much as suspect that this brass brush of mine is yours, take it."

"Can't say fairer than that," chorused the audience.

Deacon turned away from the nail-brush, now smeared with greasy polish and verdigris. It would be useless, in any case, for the Perfect System, unless one wished to die of blood-poisoning on the road to perfection.

"We'll say no more about it," he said.

He returned to his tent, hearing, as he walked along, the uncomplimentary remarks and laughter of the group he left. Arrived there, he began, with rage in his heart, to pack away his things.

It was then that he discovered that, either during the discussion or his walk, he had lost his brush.

The platoon officer remarked to his batman that morning that his Sam Browne belt was uncommonly well polished.

"Yes, sir," said the batman; "I got a new brush."

"Oh, yes," said the officer. "What did that cost you?"

"Three piastres, sir."

"Right ho," replied the officer. "Remind me later on in the day; I haven't any change now."

There was a sequel, too, to Deacon's hasty rummaging in his valise. He found, when he came to get from his store yet another nail-brush, that he was one short. His valise appeared exactly as he had left it that morning, its contents disarranged and tumbled. He could only conclude that in his haste he had unwittingly pulled out one more than he had intended, and that it had lain on the sand until somebody annexed it.

It would be useless to ask. He was not a popular man in the tent; and there was, besides, an understood rule that property left lying about belonged to the man who found it.

He thought, however, that he might just casually mention to the platoon sergeant the manner in which his brushes were going. The loss of four in so short a time rankled. He walked to the bell tent occupied by the six sergeants then with the company.

The platoon sergeant was alone at the moment. He had propped a tiny mirror, with a spider's web of cracks running from its centre to the narrow tin frame, against the tent pole. His hair was dripping with oil, and he was endeavouring to make a perfectly straight parting. He was using half a comb and a small brush.

The force of discipline was strong with Corporal Deacon. It saved him from the serious charge of "making a false accusation against a senior non-commissioned officer."

It was so impossible to prove that the brush was his. The canteen people had still over two hundred of them in stock.

True, there would be no witnesses, even were he to call the sergeant a thief. But no wise corporal quarrels with his platoon sergeant.

"Want anything, Deacon?" asked the sergeant, inspecting the thin white line, and moving his head about to dodge the cracks in the mirror.

"Any orders about next parade, sergeant?" asked Deacon.

"Nothing fresh," answered the other. "Just see if this parting's straight, will you, now you're here."

Deacon achieved the one supermanly feat that he had been called upon to perform for a long time. He congratulated the sergeant upon the excellent results he had obtained with the use of the stolen brush. Not a word of complaint did he utter.

He sat meditating gloomily until the parade was assembled. He performed the duties of right marker without enthusiasm. Nail-brushes occupied his mind: their bristles roughened his temper.

As he was going off parade, Neville, the captain's batman, came to him.

"Excuse me, Corporal," said he, "but have you a nail-brush you could lend me?"

Deacon suspected very strongly that his leg was being pulled. He looked sharply into Neville's face, but found no trace of humour there.

"What do you want a nail-brush for?" he asked.

"I've got to scrub the Captain's dog," Neville explained. "He told me to borrow a nail-brush off one of the men if I could."

"You'd better tell the Captain to buy his own brushes."

"Is that an order, Corporal?" asked Neville, with a grin. "I told the Captain I thought you had one, and he said he was sure you'd lend it me."

"Do you think I'm going to use a brush that you've been using on a dog?"

"I don't see why you shouldn't," retorted Neville; "You could easily find men who aren't as clean as old Barger is."

"All right, come along," said Deacon, grumpily.

Barger himself came up as Deacon was handing over brush No. 5. He was a beautiful white bull-terrier, spotless as snow.

"Look at him, Corp.," said Neville; "see how clean he is. He won't hurt the brush—Will you, boy?—and I'll wash it out well. What's more, I'm going to use it with some disinfectant the Captain's got. He's afraid Barger's going to get some skin disease."

"You can keep the brush," said Deacon.

"Thanks, Corp.," and Neville ran off with Barger puffing after him.

Night operations of a sort had been planned for that same evening, but details had not been given out. Whether these would consist of a practice attack, a night march, or the carrying out of a scheme, nobody knew. It was not until early afternoon that the orderly sergeant walked through the lines, bawling through tent doors, "Parade at seven—route march—full packs."

He was received with groans. Full packs are not popular with the infantry men.

There ensued a general hunt for sand bags. Men walked casually to the dump, stood by it, endeavouring to look as though they merely happened to be there, and had no definite purpose in view. Granted that fortune was kind, and that none of the quartermaster's staff happened to be about, one or two sandbags could be abstracted without detection.

A private, returning successful from a raid of this sort, gave one to Deacon.

The purpose of the sandbag was obvious. A small amount of kit can easily be disposed in a valise in such a way that it bulks large, and detection of the fraud is impossible unless the officer inspecting happens to test the weight of the pack. The result is known as a "sergeant-major's" pack, for reasons with which men in the service are well acquainted, and has distinct advantages.

So, as the Perfect System did not include the carriage of heavy weights for long distances upon the back, Deacon loaded all the kit he could into the sandbag. The remaining nail-brushes were wrapped in a towel, and went at the very bottom. Then, to prevent theft, he tied the neck of the bag very firmly with white string, and attached a label with his name.

Exactly how it happened that the tent he occupied, and that tent only, should have been destroyed by fire whilst the company was marching about in Palestine by starlight, remains a mystery to this day. The court of enquiry, after consideration as to whether the damage had been caused by sparks from the cook-house fire, regretfully reported that no blame could be attached to any person, and charged the loss to the public.

The occupants of the tent had, however, to pay for articles of kit that were in sandbags, and which should have been on their owners' backs. They had also to bear the loss of their private treasures.

The only silver spot in Deacon's great cloud of woe was the knowledge that the canteen possessed a great store of nail-brushes. He went round at the very earliest opportunity.

He had decided that twelve was too great a number: he would buy for himself only.

"Three nail-brushes, please!"

"Sorry, mate, but we haven't such a thing. We did have, but we sent them down the line last night. No demand for 'em here."

### A New Series on Teaching.

Hodder and Stoughton have in the Press "THE NEW TEACHING SERIES," which claims to be an entirely new departure in text books. The series has been written this year to the specification of the new demands in education as regards method and curriculum. The volumes already in hand include:—

- "English Literature: the Rudiments of its Art and Craft."
- "Mathematics of Business and Commerce."
- "Everyday Mathematics."
- "The Mathematics of Engineering."
- "The Foundations of Engineering."
- "Chemistry from the Industrial Standpoint."
- "The Natural Wealth of Britain: its Origin and Exploitation."
- "Chemistry and Bacteriology of Agriculture."
- "Geography of Commerce and Industry."
- "Applied Botany."
- "Citizenship."
- "The Light of History."
- "Industrial History."

## CAN THESE BONES LIVE?

By DAVID SOMERVELL.

### V.—New Material.

PREVIOUS articles in this series have discussed the teaching of History and English Literature, and have suggested that these subjects have suffered in schools from a treatment which—call it antiquarian, academic, classical, or what you will—has not considered sufficiently the average needs of the average mortal. Of course, it is easy enough to put up a case against making education "popular." It may even be admitted that there is a kind of "popular" teaching which should be avoided. None the less it remains true that unless education is popular in the best sense, unless it really enlists the goodwill of the pupil, it will amount to very little. Education must kindle enthusiasm, and it will only kindle enthusiasm when the pupil realises that it is dealing with things that really matter to him, not merely of course in a vulgar utilitarian sense, but in the real sense in which religion (as distinct from mere church-going) and patriotism (as distinct from mere flag-wagging) matter.

I might premise once again that I am writing in these articles solely of the upper stages of secondary education, and am thinking primarily of public school-boys between the ages of sixteen and eighteen, with whose work I am familiar. I make no apology for this restriction, since it seems to me that this field of educational enquiry is at present less explored than any other. The traditional "liberal education" on classical lines has become, except for the few, a thing of the past, and until some other broad conception of a liberal education has been evolved in its place, we shall continue in our present confusion.

What is, for us, the most important year in modern history? Answer: 1919. What is, for us, the most influential and widely read form of literature? Answer: The newspaper.

It has often struck me as odd that teachers, particularly in boarding-schools, leave the newspaper to take care of itself. A "house" of forty boys will allocate a certain portion of their terminal library subscription to the purchase of papers, and with this they will purchase, perhaps, two "Daily Mails," one "Mirror," one "Sportsman," one "Punch," one "Sporting and Dramatic," and one "Sphere." What a training for future citizenship!

But if once we admit that one of the prime duties of the "new liberal education" is to turn out boys and girls with some real understanding, however elementary, of the form and the tendencies of the society they live in, and of their own place and duties therein, it is clear that we must give up this "laissez faire" attitude to the newspapers and make an educational instrument of what otherwise may well be an educational enemy. *We must teach our pupils to use the newspaper.* If the reader will admit that, my aim in this article is attained.

It remains to make certain suggestions as to how the thing shall be done.

One point is of cardinal importance. If one is to understand anything of the affairs of this imperfect world, it is absolutely necessary to see *two* newspapers holding different views. It is not necessary to see two every day, perhaps; but the reader of the "Daily Mail"

on Mondays, Wednesdays, and Fridays should read the "Daily News" on Tuesdays, Thursdays, and Saturdays; and this, of course, is much more easily managed in a school than in the ordinary home.

On the whole, however, "Weeklies" for the schoolboy (and schoolgirl—I'm not forgetting the schoolgirl), as for the working man, are more useful than "Dailies." Even from the point of view of mere abstract intellectual exercise I can imagine nothing more valuable in its way than the comparative study of the "Notes of the Week" in, say, "The Spectator" and "The New Statesman," or "The Nation." Every House, in fact, ought, in its reading room, to contain on a smaller scale the kind of outfit of newspapers that the masters or mistresses require in their own common room, and the charge should not be, as it sometimes is, a subtraction from the funds of the House Library. Let the supply of newspapers be as the supply of school books—either a charge on the parent or a charge on the establishment, according to the custom of the school.

It may be said at this point: "It is one thing to provide the water, and another thing to get the horses to drink it." Precisely: the whole business of schoolmasters is getting the horses, by fair means or foul, to drink the water. I have not space to go very elaborately into the question of method, and I am not sure that that matters, for, once you have got teachers to realise an aim, they will hammer out methods for themselves. I will content myself with describing two methods: the first was very unambitious, and was adopted by myself in a middle form; the second was exceedingly ambitious, and was adopted with much success by the head boy of a school boarding-house.

My method with my form was to set apart a period on Monday afternoon, which became known as "Facts of the Week." The class had to write down very brief accounts of the four chief events of the previous week. About ten minutes was allowed for this. When the papers were given back, corrected and marked, two days later, we had an informal discussion.

The method employed by the head boy I have mentioned was to form a "newspaper club," which rather over half the House voluntarily joined. Each boy, or, in the case of the younger boys, each group of two or three boys, undertook to read a particular daily or weekly, and between them they covered all the more important English and one or two French papers. When the club met on Sunday afternoon, two or three important events were selected, and the trustees of each paper briefly described the attitude of the paper towards the event. These were discussed, and finally minutes of the meeting compiled, consisting of a brief statement of the events, with a precis of the representative points of view appended. The whole was typed on the House typewriter, and posted on the House Board as the "News of the Week."

You gasp? Well, that is the sort of result that is obtained when real enthusiasm is kindled, and perhaps the chief of the many aims of education is to evoke enthusiasm about the things that really matter.

I once mentioned the above experiment to the editor of a leading London paper. He remarked "What a severe ordeal to subject a newspaper to!" Exactly. When once Democracy takes the trouble to treat its newspapers seriously, it will make them its most valued servants. At present they are its not very scrupulous masters.

## CHRONICLE OF EDUCATION.

- 16 July.—Home Office Circular dealing with the Employment of Children, and urging adoption of by-laws to protect children from unfair conditions. Special attention drawn to Section 3 of the Act of 1903, and Section 15 of the Act of 1918, which provide for the protection of children from injurious work.
- 22 July.—Opening of Conference of New Ideals in Education, at Cambridge. General subject: "The Creative Impulse and its Place in Education." Inaugural address by Mr. Henry Wilson, President of the Arts and Crafts Society.
- 24 July.—Issue of official memorandum fixing appointed days for bringing into operation certain important sections of the Education Act.
- 25 July.—Conference of representatives of Local Education Authorities, and of the National Union of Teachers, convened by Mr. Fisher. Resolved that a Standing Joint Committee of representatives of Local Education Authorities on the one side, and the National Union of Teachers on the other, in equal numbers, should be constituted, if possible, by the 12th September, 1919.

## COMING EVENTS.

- 12 August.—Meeting of a constituent committee of ten members to take the preliminary steps towards setting up a Standing Joint Committee on Salaries.

### Some Appointments.

Dr. Helen Marion Wodehouse, Principal of the Bingley Training College, to be Professor of Education in the University of Bristol.

Mr. F. J. Hendy, Principal of Borough Road Training College and formerly Headmaster of Bromsgrove School, to be Director of the Training of Teachers in the University of Oxford.

Dr. John Strong, Rector of the Royal High School, Edinburgh, to be Professor of Education in the University of Leeds.

Sir William H. Beveridge, Chief Permanent Official of the Ministry of Food, to be Director of the London School of Economics, in succession to Dr. W. Pember Reeves.

Professor F. M. Powicke, to be Professor of Mediaeval History in the University of Manchester.

Dr. Sydney Chapman, Fellow and Lecturer of Trinity College, Cambridge, to be Professor of Mathematics in the University of Manchester.

Sir Theodore Morrison, formerly Principal of the Moham-medan College, Aligarh, and lately a member of the Council of India, a Lieutenant-Colonel during the war, to be Principal of Armstrong College, Newcastle-upon-Tyne, in succession to Sir William H. Hadow.

Mr. F. A. Norwell, to be Lecturer in Mathematics and Science at the North Wales Training College, Bangor.

Dr. O. H. Prior, of Rugby School, to be Professor of French in Cambridge University.

**SUBJECTS AND METHODS.****Camps and Walking Tours for Pupils in Continuation and Secondary Schools.**

THE Education Act of 1918 allows Local Education Authorities to make provision for school camps, and thus tardily allows teachers to put into practice what our Continental confrères have been doing for many years. The establishment of Continuation Schools in this country will provide many opportunities for showing "how not to do it," as well as for much experimental and pioneer work in the methods of instructing and educating the young persons entrusted to our care. The greatest danger before teachers is that they may seek to "continue" the methods of primary education and to run on in the ruts and grooves of the past.

The new schools should be devoted primarily to Education in the broader sense, and to training in the art of living and of the right use of leisure. Thus, to take our "young persons" away from their cramping environment and from the every-day tasks for a brief week or fortnight to the hills or the sea will be a "more excellent way" than to coop them up in "occupied elementary schools"! (May the souls of the members of the Advisory Committee on Buildings for Continuation Schools find peace.) Since these young persons are required to spend at least 320 hours per annum in attendance at a Continuation School, there is no reason why forty or fifty of these hours should not be spent in camp, or on an educational walking tour, where instruction, physical development, recruitment of health, and true education may go on simultaneously.

The arranging of the practical details of such schemes will call for much thought and for co-operation of Local Education Authorities. Let us hope that we may look forward, in the near future, to the publication of a scheme by the Board of Education, announcing that all the major arrangements have been made and that all that Local Education Authorities and the Heads of Continuation Schools and of Secondary Schools need do is to make application for the use of the educational camps, and to suggest dates for the proposed tours or visits to the camps.

For instance, one can imagine that the Board of Education will arrange through the Treasury for the purchase of such areas as the Snowdon massif—*i.e.*, all that land bounded by the road from Llanberis to Pen-y-Pass, thence to Beddgelert and back to Llanberis; the Isle of Purbeck on the Dorset coast; the land within a five miles radius of the summit of Ingleborough; and the strip of coast from Whitby to Robin Hood's Bay with two or three miles of the hinterland.

Such areas might have five or six camps established in them, each with permanent attendants during the camping season, so that parties of young persons might make walking tours through the district, passing from camp to camp, spending a night or two at each, and returning to their base or starting point at the end of the tour. If the tours are carefully planned, the camps could be fully occupied throughout the whole of each season, and thousands of young people would gain some insight into the art of travel and would receive its broadening and uplifting influences.

Our young persons taken from their daily occupation in the mill, the factory, or the office, and shown the wonders of the build of the hills and mountains, the origins of valleys, observing the processes of coast erosion, of the silent dissolving away of the solid mountains, the evidences of past and extinct forms of life in the fossils that they find, the intricacies of the web of life and the interactions of insects, birds, and plants, and studying the relics of earth-works, forts, and churches made by our ancestors, all under the dome of the everlasting sky and in the health-giving sunlight and air, will return to their work with new zest and broader outlook, and with far greater possibilities of becoming those "good citizens" which the Board of Education tells us it is our aim to make. H. VALENTINE DAVIS

**EDUCATION ABROAD.****Rose Sidgwick Fellowship in America.**

By the generosity of American subscribers a Fellowship has been founded in memory of the late Rose Sidgwick and her services to Anglo-American friendship. Miss Sidgwick was a member of the British Educational Mission to America, and she died in New York at the close of the tour amongst American colleges and universities which was carried out by the mission in 1918.

The fellowship is to be awarded annually to a British woman for a year of graduate research work at an American college or university, with the definite object of drawing closer the bonds of friendship and understanding between England and America, and of commemorating the services of one who gave her life in the cause. The fellowship has been subscribed to by every college and university visited by Miss Sidgwick.

**A New School of Social Research.**

We have received a prospectus or "announcement" of a new School of Social Research which is to begin its work in October next at 465, West Twenty-third Street, New York City. The school is under the general control of a Board of Directors, including Dr. Charles A. Beard, Director of the Bureau of Municipal Research and Training for Public Service; Mr. Herbert Croly, editor of "The New Republic"; Mr. Thomas W. Lamont; Mr. Henry Bruère, Director of the Bureau of Industrial Research; and Mrs. Willard Straight. The aim of the school, as stated in the prospectus, is to "seek an unbiassed understanding of the existing order, its genesis, growth and present working as well as of those exigent circumstances which are making for its revision." The Directors express the view that economics, anthropology, history, psychology, and the other human sciences have been studied and taught hitherto without sufficient reference to contemporary social facts. As a result of this practical separation of the social sciences from the ever-changing economic and industrial world, both learning and society have suffered. We have neither sufficient practical knowledge, nor an adequately trained personnel to cope with the difficulties, complex and dangerous, which now confront us. Hence the courses of study are not arranged under the usual departmental headings—political economy, sociology, history, psychology, etc.—for this tends to obscure the constant connection and interplay of the various interests and activities of mankind. Each of the courses will include such data, historical, economic, political, psychological or anthropological, as appear to bear on the special inquiry in hand. In the general grouping here adopted the courses fall into three categories.

I. The first group of studies will be primarily descriptive and historical in their emphasis. They will seek to give an "unbiassed understanding of the existing order, its genesis, growth and present working."

II. The second group will deal with the development of thought and ideals, with human emotions, the conflict of interests, the development of a scientific attitude towards social questions and the technique necessary to research.

III. The courses in the third group will deal more directly and specifically with special contemporary problems which have been selected for study on account of their pressing importance.

The programme of instruction is arranged to meet the needs of two classes of persons, regular students and research students, and the work is correspondingly divided into so-called open and closed courses. Anyone seriously intending to carry on the work and to follow the assigned readings may enter open courses. These will consist of lectures, discussion, and readings. Admission is gained to closed courses only by consulting the Executive Secretary and the instructor.

## PRIMARY SCHOOL NOTES.

BY OUR SPECIAL CORRESPONDENT.

THE Whitley Committee movement so far as teachers are concerned is not progressing on uniform lines. There is as yet no agreed teacher policy. This is specially regrettable as regards the formation of a National Council. At present the National Union of Teachers is working towards one goal and the Registration Council towards another. The N.U.T. is claiming to be the appointing body so far as teacher representatives are concerned. The T.R.C. is making the same claim. If the N.U.T. were as representative of the whole teaching profession as the Teachers Registration Council undoubtedly is, there would be cause for weighing the rival claims. As a matter of fact, however, there is no need for such weighing. The T.R.C. is fully representative. The N.U.T. is not fully representative. The T.R.C. was *created* to be fully representative; its very existence depends on its representative character. It represents university education, secondary education, primary education, and technical education. It represents them equally. The argument that representation on the T.R.C. is not proportionate to the number of teachers represented in each category is no argument unless there is recognised antagonism between the *interests* represented. There is no such antagonism. The working of the Registration Council is itself proof of the homogeneous nature of the interests watched. The profession of teaching is best served by the support each branch can give to every branch. It is natural, of course, the National Union of Teachers should desire to be the appointing body. Of all organisations of teachers the N.U.T. is the only organisation which can claim to include members from every branch of the teaching profession. In this it is unique. It is well, though, to recognise a plain fact, and the fact is that membership of the N.U.T. among university and secondary school teachers will not warrant a claim that the Union is *fully* representative of such teachers. I am hoping it may become so in the future, but present conditions must be recognised.

The T.R.C. fulfils the requirement that the appointing body should represent all. Its eleven university members are elected by university teachers; its eleven secondary school members are elected by secondary school teachers' organisations; its eleven primary school members are elected by primary school teachers' organisations; and its eleven specialist members are elected by the specialist teachers' organisations. The full weight of the numbers in each organisation is behind its elected representatives. What more is necessary? I do not anticipate irreconcilable teacher differences on a National Whitley Council. On the T.R.C. differences have never become acute. The Council has acted solidly for teachers. A National Whitley Council, the teacher members of which have been appointed by the T.R.C., will work as smoothly and as effectively, so far as its teacher members are concerned, as does the T.R.C. itself.

Local Whitley Committees of a sort are being formed in different parts of the country. In some cases they are formed—as regards the teacher side—entirely of teachers engaged in primary schools. In other cases they are, on the teacher side, representative of each branch of the teaching service. London's local committee is not yet formed. The primary and secondary school teachers have held several joint meetings to hammer out a scheme. At one time it seemed impossible to arrive at an agreed solution of the difficulty, but there is now at least a prospect of agreement. I wonder whether the benefits resulting from a London Whitley Committee will be worth all the trouble taken to bring it into being. I have spoken to many men and women prominent in teachers' politics, and have discovered very few who expect much good to result from its formation. If there are many of these committees

formed on the lines of one I have in mind while writing, the movement had better go no further. The committee I am thinking of has five teacher members, including one *supplementary* teacher, and five members of the local authority—no motion can be deemed to be carried unless a majority of *each section* votes in favour of it!

The trouble about salaries continues throughout the country. At the time of writing, disputes are either in progress or are imminent at Heywood, Northampton, Pembroke Dock, North Riding, Middlesbro', West Riding, South Shields, Walsall, and Whitehaven. Those responsible for the education of the children are seriously alarmed, and the Board of Education is, through Mr. Fisher, openly expressing disapproval. The Board must not think the Executive of the Union favour the strike policy. They are as cognisant as the President of the Board of the fact that the children suffer. They do not accept responsibility. The Local Education Authorities must alter their tactics and become more amenable to reason. It is only when all reasonable means have been tried *without effect* that a strike is sanctioned.

The salaries dispute in London developed very rapidly, and at the time of writing has been settled *until after the holidays*. The teachers—primary and secondary—demanded a much improved scale and a fair carry over. They have failed to secure a "much improved" scale, but have secured a better carry over in the form of an immediate lump sum payment which is also to count as an advance in salary as from April 1st, 1920. War bonus—£39 per annum—is to be merged in salary and also added to the maxima of the existing scale. The increments for class teachers remain as before, but are to be annual from minimum to maximum. The increments of the heads of primary schools have been advanced to £20 and £25, and the salaries of the heads of secondary schools have been raised. In future the maxima for assistants in primary schools are to be £340 (men) and £265 (women), and the maxima of the heads in such schools are to be: Grade I, £360 (men) and £280 (women); Grade II, £440 (men) and £340 (women); Grade III, £540 (men) and £415 (women). It is estimated the cost of all improvements will amount to £629,000 for the current year, and that this cost will decrease yearly after 1920-21 until it reaches about £494,000 annually. Sir Cyril Cobb has taken every care the above increases shall be well advertised in the daily Press. "Fortune for L.C.C. Teachers" was one headline, and in almost every case the "great" increases granted were written up so as to prejudice the teachers' case with the public as much as possible. Notwithstanding this it is still a fact that a young man beginning as a teacher is paid less money than a young man beginning as a police constable. The teachers' organisations have not refused this offer. They are taking what is offered them. At the same time they have intimated their intention still to press for the scale they claim. The scheme passed the Education Committee on the 16th July. At the time of writing it has yet to be considered and approved by the full Council.

The question of the higher education of the very bright children in rural districts needs special attention at the hands of the local authorities if the object of the new Education Act is to be achieved. The secondary schools are generally found in urban centres and are beyond reach on the usual scholarship allowance. Special provision for boarding and lodging must be made for children in districts removed from easy access to a centre for higher education. The case for action was well put by a recent speaker at a teachers' meeting. He pleaded the cause of these deserving children with great eloquence. The remedy recommended—private assistance—though well meant, will not do. There must be no suspicion of private charity about the help given. The ultimate benefit is to the public, and the public purse must pay.

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### Bedford College for Women.

A French Holiday Course has been organised for the Board of Education at Bedford College, from August 26th to September 9th. Lectures will be given by Monsieur Rudler, Professor of French Literature in the University of London, on Literary Method and on a subject taken from French Literature.

Cards of admission to the lectures only, on payment of a fee of one guinea for the course of eleven, may be obtained from Miss Batchelor, Bedford College, N.W. 1.

### The London School of Dalcroze Eurhythmics.

At the examination for the Teaching Certificate in Eurhythmics held in July the following were successful: Griffin, Ethel Joyce; Lingford, Dorothy.

### University of London—New Schools.

The University of London is about to inaugurate two new schools. One is intended for the training of librarians, the other for the training of journalists. The former will comprise instruction in literary subjects as well as the technical parts of a librarian's duties, such as the care of books, cataloguing and indexing. For practical demonstrations and as an exercise ground for beginners, the University libraries will be available. The school of journalism has not yet taken its final shape, but a committee is working out the details under the chairmanship of Sir Sidney Lee, and this experiment will be watched with great interest, since previous attempts in the same direction have served to show that the term journalist covers a wide range of activity—so wide indeed that it is difficult to find any common ground as between certain of those who claim the right to use it in describing themselves.

### The Associated Board of the Royal Academy of Music and the Royal College of Music for Local Examinations in Music.

The thirtieth annual meeting of the Associated Board of the Royal Academy of Music and the Royal College of Music was held at the Royal Academy of Music, York Gate, Marylebone Road, N.W., on 17th July. Mr. Ernest Mathews took the chair.

The minutes of the previous meeting having been confirmed, the Secretary read the report, which expressed the gratification of the Board at being able to announce that H.R.H. The Prince of Wales had graciously consented to become its president. A tribute was paid to the memory of the late Sir Hubert Parry, expressing the profound regret of the Board at the loss of "a wise counsellor and a staunch friend." The number of candidates in the United Kingdom was 5,006 in the Local Centre Examinations, and 34,040 in the School Examinations. The Chairman, in moving the adoption of the report, said: "It is particularly gratifying to us that H.R.H. The Prince of Wales has seen his way to accept the position of president of this Board. In doing so, he is carrying on the work of his father and grandfather before him. Owing to the enormous amount of work the Prince has undertaken, it was impossible for him to be present at this meeting, but he has expressed a hope that he will be able to be present at our future meetings. With regard to the growth of the work in this our thirtieth year, it is interesting to note that during the first year the Board examined about 1,100 candidates; in its tenth year, 12,000; in its 20th year, 35,000; and in the past year a little less than 60,000." Sir Walter Parratt seconded the motion, and the report and balance sheet were unanimously adopted. A vote of thanks to Mr. Ernest Mathews for presiding, proposed by Sir Alexander Mackenzie and seconded by Dr. H. P. Allen, terminated the proceedings.

## BLUE BOOK SUMMARY.

### The Act in Being.

The Board of Education have issued a circular (1118) with an Order fixing further Appointed Days under sub-section (3) of section 52 of the Education Act 1918. This Order appoints the first day of August, 1919, as the appointed day for the whole of the first five sections, and also for the eighth section of the Act to an extent indicated in the Schedule. The first five sections are highly important, since they include the demand for schemes of work, the development of education in public elementary schools by means of central schools, etc., the provision of continuation schools, co-operation between Education Authorities, and the machinery for adjusting schemes to the requirements of the Board.

Under Section 8, sub-sections 4 and 5 are to be operative from August 1st. The former permits a Local Authority to make a byelaw, with the approval of the Board, providing that the age of compulsory attendance at school shall be raised to six years. Sub-section 5 provides that the Board may authorise a Local Authority to furnish instruction in public elementary schools for children up to the age of 16 or later. The following summary shows the Sections of the Act which are now in operation, with the appointed days:

Sections 1 to 5 (1 August, 1919); Section 6 (1 November, 1918); Section 7 (8 August, 1918); Section 8 (3) (2 Dec., 1918); Section 8 (4) and (5) (1 August, 1919); Section 8 (6), (7) and (8) (8 August, 1918); Section 9 (1 February, 1919); Section 13 (paragraphs (iii) and (iv) of Sub-section (1) (1 April, 1919); Section 15 (8 August, 1918); Section 16 (except paragraphs (c) and (d)) (8 August, 1918); Section 17 (8 August, 1918); Section 18 (except so far as it imposes a duty on Local Education Authorities) (8 August, 1918); Section 19 (8 August, 1918); Section 21 (8 August, 1918); Section 22 (27 November, 1918); Sections 23, 24, and 25 (8 August, 1918); Section 26 (1 April, 1919); Section 27 (8 August, 1918); Section 28 (1 April, 1919); Sections 29 to 37 (8 August, 1918); Section 38 (2 December, 1918); Section 39 (8 August, 1918); Section 40 (except as to inquiries pending on 8 August, 1918) (8 August, 1918); Section 41 (8 August, 1918); Section 42 (1 April, 1919); Section 43 (8 August, 1918); Section 44 (except sub-section (6) and so much of sub-section (4) as refers to Small Population Grant) (1 April, 1919); Section 44 (so much of sub-section (4) as refers to Small Population Grant) (1 October, 1918); Section 44 (6) (1 November, 1918); Sections 45 to 49 (8 August, 1918); Section 52 (8 August, 1918). Sections 50 and 51 are consequential upon the other provisions of the Act, and are brought into operation so far as it is necessary to give effect to them.

### Training of Health Visitors.

The new link between the Board of Education and the Ministry of Health is illustrated by the fact that the latter body, having decided that all persons who are to be recognised as health visitors should undertake a special course of training, has consulted the Board of Education, and the two departments have prepared jointly a series of regulations setting out the conditions of the prescribed training. Provision is made for the recognition of two types of course—namely, a full course of two years' duration intended for ordinary students and a shortened course of one year's duration for trained nurses and other persons already possessing substantial knowledge or experience. With respect to the full course, the minimum age for admission has been fixed at 18, because it is essential that girls should be able to proceed direct to the course on leaving a secondary school. Recognising that students who enter at this age will only be twenty on the completion of their course, it is expected that they will often desire to take a further course of training such as that for the certificate of the Central Midwives Board, or they may, in the first instance, take posts of limited responsibility in infant welfare centres or elsewhere.

## ASSOCIATION NEWS.

### The Teachers Council.

Up to and including Thursday, the 24th July, the number of applicants for admission to the Official Register was 28,890. Those who are not already registered should note that the prescribed period of the Alternative Conditions will expire at the end of next year. These temporary regulations provide that admission to the Register may be gained on evidence of five years of whole time teaching experience in schools or institutions accepted by the Council for registration purposes. After 1920 the conditions will be more stringent, demanding evidence of satisfactory attainments and also of a course of professional training. It is important, therefore, that those whose qualifications for registration rest mainly or solely on experience should apply to be registered at once.

The Council has recently issued a memorandum concerning the conditions under which schools or institutions may be recognised as providing a course of training for kindergarten teachers. The Council has decided that those who hold the Higher Certificate of the National Froebel Union will be held to have satisfied the conditions of registration in respect of attainments and training in teaching, provided that the certificate has been obtained after a course extending over three years at least and taken in schools or institutions approved by the Council as places of training. This requirement will apply to those seeking registration after 1920, and it should be noted that the three years need not be spent in one training school or institution. Several schools have already applied for the approval of courses of training covering the first year's work for the Higher Certificate. Students who have taken such an approved course may proceed to a college or training department of a University for the remaining two years. In Bristol two schools have become affiliated with the University, and the courses of training which they provide are linked up with the University Department of Education, thus giving to the students access to University teaching and opportunity to meet those who are preparing for other branches of school work.

### Incorporated Association of Assistant Masters.

The I.A.A.M. has sent the following letter to every Local Education Authority:—

"In view of the fact that Whitley Committees and Advisory Councils are being set up by many Local Education Authorities, we wish to approach you in order to press our views regarding the proper representation of Secondary Assistant Teachers upon such bodies.

"Our membership includes some 80 per cent. of the Assistant Masters in Secondary Schools, aided or maintained by Local Authorities, and our numbers are increasing at the rate of 100 per month. We, therefore, wish strongly to urge that no Whitley Council or Advisory Committee can adequately voice the views of Secondary Teachers unless this Association is officially represented upon it. We think it all the more necessary to press this point because we understand that, in some districts, the claim to appoint the whole of the teachers' side of the Committee is being made by an Association which cannot represent Secondary Teachers to any great extent."

### The National Federation of Women Teachers.

The secretary of this body has announced that the women teachers in London propose to form a strike fund, using for this purpose the holiday bonus granted by the London County Council in connection with the new scale of salaries. This scale has been adopted as an emergency measure pending a national settlement of the salaries question, and the Federation of Women Teachers is resolved to establish the principal of equal pay for men and women.

### Private Schools Association.

A notable exhibition of modern education, showing work done in private schools from all parts of England, was held at the Caxton Hall on Friday and Saturday, July 11 and 12.

It was opened on Friday afternoon by the Baroness de Knoop, in the absence of Mrs. Lloyd George. Sir Philip Magnus, M.P., presided, and Mr. G. H. Roberts, M.P., Mr. E. P. Housene, Mr. S. Maxwell, and Mr. John Bayley spoke during the opening ceremony.

During the two days the Caxton Hall was packed with visitors, and the exhibition proved of great interest to the general public as well as to teachers.

Demonstrations of modern methods of teaching were given. These included original methods of teaching French and history, Dr. Yorke Trotter's system of aural culture, Dalcroze eurhythmics, jujitsu—the Japanese art of self-defence—swimming exercises, spinning and handloom weaving, organised games, fencing and drill.

Great enthusiasm was evoked by the demonstration of physical culture by resistance exercises showing the Japanese method of strengthening the muscles, especially those of the trunk and back, by the children working in couples and taking it in turn to resist each other's strength in the various exercises. It was apparent that in this way the same development was obtained in far less time than by the Swedish and other drill methods.

Several companies of Girl Guides performed excellent work, some first-aid work being especially good.

An exceptionally smart Cadet Corps journeyed from Norwich to take part in the exhibition. The same school provided a gifted violinist of 15 years, who received great applause.

The graceful movements shown in the group and costume dancing, and the sweet voices of the choirs, were markedly appreciated.

A continuous entertainment given in the Concert Hall consisted chiefly of solo work, and some fine instrumental music, elocution, singing, and dancing were produced.

Several extremely well acted dramatic selections were given.

The exhibits form a wonderful collection of work, elementary and advanced, produced by private schools, and some beautiful specimens of hand-work were done by children of about nine or ten. The work of seniors was exquisite, showing application and artistic ability.

The great variety proved that the energies of the pupils were not concentrated on a few subjects only.

The exhibits included a large amount of first-class art work, and amongst the handwork already mentioned were specimens of wood-carving, raffia-work, scientific toys, and kindergarten work.

Some well-finished machinery, tools, and scientific instruments were made entirely by pupils.

Several model villages and a doll's house were made by tiny children.

The Nature Study section included weather-charts, botanic and geological specimens.

A special selection of educational films, lent by the Pathé Frères Co., were shown at the Victoria Palace Cinema, lent by Mr. E. M. Barker.

MESSRS. LONGMANS, GREEN & Co. hope to publish Vol. I of the "Official Naval History of the War," by Sir Julian Corbett, in the autumn. Five maps and 8 diagrams will be included in the volume of letterpress, which will contain about 450 pages, and, in addition, there will be a separate case containing 18 larger maps. The price of the book, together with the case of maps, will be 17s. 6d. net. This volume will end with the Battle of the Falklands. It is hoped that Vol. II will be ready for publication in the spring of 1920, and the work completed in four or possibly five volumes.

## PERSONAL NOTES.

**Professor John Strong.**

The University of Leeds has appointed Dr. John Strong, Rector of the Royal High School, Edinburgh, since 1914, to be Professor of Education. Dr. Strong was born in Barrow-in-Furness in 1868, and was educated in the Westminster Training College and at the Yorkshire College of Science—now Leeds University. He was senior master in the Central High School, Leeds, from 1897 to 1900, and afterwards became Rector of Montrose Academy, where he remained till 1914. Dr. Strong was president of the newly constituted Educational Institute of Scotland in 1917-18. He is an M.A. of London and an Hon. LL.D. of St. Andrews.

**The Rev. Dr. W. T. A. Barber.**

Dr. Barber has resigned the headmastership of the Leys School, Cambridge, on being elected President of the Wesleyan Conference. He has been at the Leys School since 1898, his previous experience having included nine years as a missionary in China, three as a Wesleyan minister in Leeds, and two as an assistant tutor in the Richmond Theological College. He was born in Ceylon, and received his early education at the Dutch Gymnasium, Stellenbosch, Cape Colony, before proceeding to Kingswood School, and later to Cambridge, where he graduated in 1879.

**Professor Alexander Findlay.**

The University of Aberdeen has appointed as its Professor of Chemistry Dr. Alexander Findlay, now Professor of Chemistry in the University College of Aberystwyth. Before going to Wales, Dr. Findlay was a lecturer in the University of Birmingham, with special charge of the department of Physical Chemistry. He is an M.A., D.Sc. of Aberdeen, a Ph.D. of Leipzig, and a Fellow of the Institute of Chemistry, and has written a number of important works, besides translating into English Ostwald's Principles of Inorganic Chemistry.

**Mr. Sydney Walton.**

"The man who is behind the Joy Loan," as the newspapers described him during the recent "Victory Loan Push," is Mr. Sydney Walton, M.A., B.Litt., formerly an assistant master in the George Dixon Secondary School, Birmingham. Mr. Walton performed valuable services as assistant to the late Lord Rhondda, at the Ministry of Food, and for his labours received a C.B.E. last year. He is regarded as one of the most successful publicity agents among the many who are now enlisted in the Government service, and, in addition, his skill in negotiation has been utilised on occasion with the happiest results.

**Mr. J. R. Broadhurst.**

We regret to announce the death of Mr. J. R. Broadhurst, M.A., for over forty years a master in the Manchester Grammar School. As a schoolboy he was a pupil of Dr. Walker at Manchester, winning a scholarship at Trinity College, Cambridge. After a distinguished university career he returned to his old school as classical master, taking first the Upper Sixth Form and later the Classical Transitus. He served under five High Masters, and the long roll of his pupils includes many distinguished classical scholars. He was singularly gifted as a teacher and as a musician, while to his knowledge of the classics was added a wide appreciation of general literature. In outlook he professed a rigid Conservatism, an attitude well illustrated by the story of a former pupil who was discussing with him some of his difficulties in grasping the philosophy of certain moderns. "My dear fellow," said Mr. Broadhurst, "the only philosophers who really understood what they were talking about were Plato and Aristotle."

## NEWS ITEMS.

**New Salters' Research Fellows.**

Four more fellowships for post-graduate study, to be held in the laboratories indicated, have been awarded by the Salters' Institute of Industrial Chemistry to Captain W. H. Hoffert (Oxford), Captain A. G. Pollard (Rothamsted Experimental Station), Mr. L. A. Ravald (Municipal College of Technology, Manchester), and Mr. M. L. Wilson (The University, Manchester.)

**Degrees in Commerce and Travelling.**

The Vintners' Company has decided to found, in connection with the University of London's scheme for degrees in commerce and travelling, scholarships of £150 per annum, tenable for one year, to be known as "Vintners' Scholarships." These are available for students who intend to engage in the wine trade.

**Cost of a School.**

Because the building of Farnworth Grammar School had to be suspended during the war, the building will now cost the Lancashire Education Committee £41,283, against £18,300, the pre-war estimate.

**Training Grants for Soldiers.**

The ex-service students in the Manchester College of Technology have sent a protest to the Minister of Education in reference to the delay in paying the grants under the Government scheme for the training of ex-officers and men. They state that the grants were applied for in April last.

**London Women Teachers and Equal Pay.**

The National Federation of Women Teachers recently held a meeting to urge the London County Council to adopt a salary scheme which will place women teachers on an equal footing with men. The feeling of the meeting was indicated by the fact that before the chairman (Miss Dawson) began her address someone in the audience passed up a £5 note with which to start a strike fund, and this was followed by many other gifts for the same purpose.

Mrs. Canbury reported that they had received no satisfaction from the teaching staff sub-committee of the County Council.

**London Children and Peace.**

Many thousands of London school children united in thanksgiving services for victory and peace in different churches in London. At eleven places of worship central services, arranged by the London County Council, were held, and attended by about 20,000 children drawn from schools all over the County Council area. These services took place at St. Paul's Cathedral, Westminster Abbey, the Wesleyan Central Hall, the City Temple, Southwark Cathedral, Christ Church, Westminster Bridge Road, Woolwich Parish Church, Westminster Cathedral, St. George's Cathedral, Southwark, the Great Synagogue, and East London Synagogue.

For those unable to attend the churches short services were held in the schools.

**Cinematograph in Schools.**

Acton's new schools may be provided with a cinematograph, and already a proposal to have a lantern lecture-room has been adopted. The Education Committee, anxious to make the new buildings perfect, have invited suggestions from their teachers.

### BOOKS AND THE MAN.

#### Some Remarks on Holiday Reading.

I confess to a feeling of sincere admiration for the man who can sit down in cold blood and plan a recreative course of holiday reading, and then go away and keep to it. Anybody can plan a course of reading for instruction and profit, but that is not holiday reading in the true sense of the word, although it may be the reading one does during the holidays. The best kind of holiday reading has in retrospection the fine flavour of spiritual adventure, and the essence of all true adventure is that it is unexpected. You may get that adventure from a book which you have taken away with you in your bag, but you are much more likely to get it from a book which you come across fortuitously—on the seat of a railway carriage, for instance, or on the shelves of a lodging house.

The fact is that the books one takes away with one on holidays are seldom the books one reads. This is so true that there is hardly a person who could be found to deny it; yet most of us prepare for a holiday by luxurious contemplation of the books we are going to read during its progress. We have visions of ourselves, solitary beneath blue skies on a windy down, or lazily lying on the edge of a cliff; and there is always a book in the picture. Usually it is a book which we know we ought to read in just such circumstances, and the thrill of perfect adjustment makes up the greater part of our enjoyment. As a matter of fact, however, this kind of dream seldom comes true—never the time and the place and the loved book all together. The book we want is always the book we have left at home. There it rests, while our being aches for it in throes of unfulfilled desire. That is why a man with the Greek Anthology in his pocket, sitting pensive beside a blue sky, has been known to spend all of a sunny morning reading a scrap of week-old newspaper which the breeze blew to his feet.

Quite seriously, however, the joys of holiday reading are the joys of the adventitious, and nobody can safely reckon them up in advance. Given the right spirit, the proper combination of time and circumstance, even very dull books yield unforeseen delights when one is on holiday. What discoveries there are to be made on the shelves of the sitting room or in the little circulating library at the stationer's! There repose the unconsidered trifles of periods sometimes incredibly remote. Well-saved in careful brown-paper covers, you shall find *Queechy* or *The Old Lamp-Lighter* and recover the atmosphere of youthful Sundays. In the out-of-date little library you will come across the novels of which you read reviews several years before—successes of a bygone day that passed you by in the flurry of affairs—and though you may have half a dozen of the latest novels in your bag, you will not be human if you do not neglect them for the books that thus throw themselves in your way.

Some people, of course, have favourite holiday books which are indispensable to their perfect enjoyment. I am one of them. My favourite holiday book is Mackenzie's *Man of Feeling*, which you will find duly appraised in any text-book of English Literature. It is, I understand, a masterpiece of the sentimental school—full up of sentimentality and slopping over—the ancestor in a direct line of *The Rosary* and *East Lynne*. Henry Morley included it in that library of English Classics which Messrs. Cassell

published forty years ago, and I believe he thought very highly of it indeed. My own copy is dated 1820, and I bought it for twopence over twenty years ago, because I felt that it was my duty, as a serious student of English Literature, to know what it was all about. Since then *The Man of Feeling* has accompanied me into the remotest corners of England and Wales, and several times overseas. It has become, as I say, my favourite holiday book, and it is always the first thing I put into my bag when I am packing. After the holiday is over I take it out again, and pat it affectionately, and put it back on its shelf for another year. One of these days, I have no doubt, I shall read it, but I hope that may not be for a long time yet, for once it is read it will cease to be my favourite holiday book. All its glamour will be gone, and I do not know wherewith I shall replace it.

From this personal instance arises the only practical piece of advice that is worth having on the subject of holiday reading—and that is, to take away on holiday only such books as can be neglected with impunity. There is, however, one kind of book which it is always safe to take away, and that is an anthology. Almost any anthology will do, provided that it is not compiled by a school-book editor for examination purposes. E. V. Lucas's *Open Road*, for instance, is a wonderfully companionable book, where something can be found to suit the mood of any moment. With that, or some similar book in his pocket, a man is almost as well off alone as with a friend, for the book will be garrulous, pensive, and exhilarating by turns; and sooner or later it will echo the secrets of the reader's inmost heart. From this point of view an almost ideal holiday-book is *The Notebooks of Samuel Butler*, which is now procurable in one volume from Messrs. Fiffeld at six shillings net. The merit of old Samuel Butler is that he never poses, and that he gossips about every subject that enters into the life of the cultured man. Now and again he breaks off and tells stories; again he is discussing some abstruse problem of evolution or asserting that a hen is only an egg's device for producing another egg. He talks of the beauty of mountain scenery and of buildings, of music, art, and literature, of domestic servants and the artist's soul, and whatever he has to say is said with extraordinary lucidity and point. All things considered, I am inclined to regard Butler's *Notebooks* as the finest holiday book in the world, and I wish that it had been my fortune to read it on the open road or by the side of an inn fire.

But, after all, holiday reading is an unprofitable subject to write about. No man can describe to-morrow's sunset or teach one how to enjoy it by splashing down on a palette the colours with which it may perhaps glow. The true holiday-maker will go to meet his happiness light-heartedly and careless of what may befall. He may find ecstasy in a time-table, or, given bad weather, a wealth of melancholy delight in a volume of *The Quiver*. For the person who wants a course of holiday reading laid out for him in the style of the Hundred Best Books there is no hope at all.

#### Books.

All the skies of the brain are rolled above Life's plain—  
For the soul that earns her eyes, constellations of delight;  
But our gaze is hemmed by Earth few do heed their  
gracious worth;  
How kind are noble books, how wholesome and how wise.

HERBERT E. PALMER.

## REVIEWS.

## Holiday Books.

In *An Ethiopian Saga*, by Mr. Richmond Haigh (Allen and Unwin, 5s. net) we have a work of somewhat exotic quality with a subtle charm, sufficient to outweigh the disadvantages of uncouth names and a literary style which is imperfectly modelled on that of the Old Testament. The story is vigorous enough to hold one's attention, and there are many arresting examples of native sayings and proverbs drawn from the author's experiences in South Africa and vouched for by the Rev. J. A. Winter of *Sekukuniland*.

*The Curious Friends*, by C. J. Delagreve (Allen and Unwin, 6s. 6d. net) is a tale of a secret society, of which the members were distinguished by wearing blue beans. The Curious Friends, as the members are called, are "held together by love." They are introduced to us after we have watched the upbringing of Colin Gilson, who is destined to become one of their number. The story of his childhood and youth is interesting, and the account given of The Curious Friends, if somewhat fantastic, is marked by skill in character drawing and by a complete avoidance of unlovely people. To say that the book is harmless and agreeable would convey a wrong impression. It is more than negative in its merits and affords excellent reading.

*The Lay of the Land*, by Robert A. Hamblin (Allen and Unwin, 6s. 6d. net) is a pleasant and well-told tale of country life, in which we have two chief characters, neighbours at the opening of the story—one a carpenter called Shortmeal, the other a plumber called Bellowgrass. As the result of a legacy from an aunt and a public-house, Bellowgrass rises in life, becomes a "sanitary engineer," as is the way of ascended plumbers, and builds himself a new house. Aided by their wives, the friends become somewhat estranged, and it is not until Bellowgrass discovers that he has built his new house on land partly appropriated from Shortmeal that a reconciliation is effected. The peace is sealed by a marriage between the children of the two, and everything ends happily. Told thus, the story sounds commonplace, but in the book itself there is a note of rare comedy and an excellent power of straightforward narrative which distinguish Mr. Hamblin's work and make us ready to read more of his stories.

*The Trial Stone*, by John Gower (Allen and Unwin, 6s. 6d. net). Felix Neville belongs to a family which calls coffee "cawfy" and is in every respect very superior. He is sent to Eton and Oxford, and thereafter passes through a series of adventures such as are not uncommon where a young man is bred in indolence and feels the comforting support of the parental purse. Thus Felix dawdles in an insurance office, potters about in a newly-formed department of State, and, after a humiliating experience in America as the victim of a thrusting company promoter, he returns to England in time to join the Army in France. His experience there is the trial stone, but we confess that we find the author's use of army initials, such as D.D.V.S., somewhat bewildering. Possibly the mental effort needed to understand these mysterious symbols had a bracing effect upon the mind of our happy warrior, for in the final chapters we hear him discoursing on the war, its causes and effects, with some approach to coherence, albeit with little good sense. We leave him about to resume business life once more, after accepting with characteristic flabbiness the loss of a young lady's hand and heart. If there should be a sequel to this volume we suspect it will have to be called "Infelix Neville."

*Any Soldier to His Son*, by George Willis (Allen and Unwin, 1s. net), is a collection of verse dealing with the war in a singularly poignant and moving way. Mr. Willis has performed a real service by exhibiting war as it is and not as the picturesque writing of some war correspondents would paint it.

*A Year in Public Life*, by Mrs. C. S. Peel (Constable, 7s. 6d. net). Hundreds of men and women have gained some insight into the working of Government offices during the war. Mrs. Peel was a co-director of the Women's Service in the Food Ministry, and her experiences have supplied her with material for a most amusing and agreeable book. Rightly understood, her record is full of valuable lessons which ought to form part of the syllabus for examinations in the Civil Service competition. As, for example, Explain and justify the statement by Mrs. Peel that "The man who is finally left with a minute and obliged

to answer it loses the game"; or, again, "Briefly describe the office furniture which is appropriate for the various grades of officials, and draw a graph exhibiting the relation between official salaries and floor-coverings."

Mrs. Peel survived a year of official life without losing either her good sense or her good humour, and both are present in full measure in this entertaining volume.

*The Strong Hours*, by Maud Diver (Constable, 6s. net). This volume continues and completes the story begun in Miss Diver's previous novel, "Strange Roads," and gives us a further picture of the Blount family and of the doings of the two brothers, Derek and Van. Miss Diver's practised pen maintains the interest of the tale, and with the aid of a flavour of German spy transactions and suspicions of a secret wireless installation, a timely war note is introduced. An interesting story for a holiday afternoon.

*Home Fires in France*, by Dorothy Canfield (Constable, 6s. net). A series of short stories concerning life in villages behind the firing line in France, as seen by American eyes. They are admirably told, and range from poignant tragedy to light comedy. This is a book which is heartily to be commended.

*The Wayfarers' Library* (Dent and Co.) now numbers scores of dainty volumes, all well-printed and strongly bound, of a size convenient for the pocket or for a corner of a knapsack. The volumes sent to us include such well known favourites as *The Red Axe*, by S. R. Crockett; *The Lady Noggs*, by Edgar Jepson; and *The Dream and the Business*, by John Oliver Hobbes. An excellent opportunity is thus afforded of renewing old friendships, and in addition there are newer stories of proved merit, all admirably adapted for holiday reading. The well-chosen title of the series is aptly matched by the selection of works which it covers.

*English Fairy Tales*, by Ernest and Grace Rhys, *Spanish Fairy Tales* by J. Munoz Escamez, and *Æsop's Fables*, adapted by F. C. Tilney, are issued by Dent and Son. They are charming books for children, strongly bound in attractive covers and printed in type which will do no harm to young eyes. The illustrations in colour are excellent, and the stories are well told. A young lady of ten assures us that they are "awfully jolly books," a verdict in which we concur heartily.

*Java Head*, by Joseph Hergesheimer (Heinemann, 7s. net). Mr. Hergesheimer's second novel hardly rises to the splendid height of "The Three Black Pennys." It lacks the special interest which arose from the attempt to depict successive generations of the same family. Nevertheless it deals in a skilful and arresting fashion with another family—the Ammidons of Salem, shipowners and merchants. The action is compressed into a few summer weeks, beginning with the return of Gerrit Ammidon from China, when he brings his Manchurian wife, Taou Yuen, and introduces her to the conventional and almost puritanical circle of his family and friends. Gerrit is the bold adventurer, set in sharp contrast to his stay-at-home brother, but his boldness does not serve to make life tolerable for Taou Yuen, who is a strangely impressive figure, moving in stately fashion behind the story until events are too complex for her and she commits suicide. There is all the material for a great tragedy and a great novel, but we feel that true greatness has been missed through the unaccountable failure of Gerrit to live up to his early promise. "Java Head" is certainly a very remarkable book, holding a place far above the common run of novels.

*Jinny the Carrier*, by Israel Zangwill (Heinemann, 7s. net). After a long interval Mr. Zangwill has written another novel, this time dealing with rural Essex and setting forth the doings of a charming and vigorous damsel who conducts the business of a country carrier and plays the part of a friend to the whole neighbourhood. Her racy philosophy and sturdy independence are her armament for a long fight against her soldier sweetheart, who disapproves of her business enterprise and seeks to compete against her. In the end the rival firms amalgamate and the principals are married. The story is leisurely in its course, and its interest is sustained rather by careful character drawing than by rapid action. We recall a short detective story from Mr. Zangwill's pen which was in marked contrast to this later effort, and we are inclined to think that Jinny's story might have been compressed into smaller space with advantage.

(Continued on page 308.)

# TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, 29th February, 1912.)

---

## OFFICIAL LIST OF REGISTERED TEACHERS

---

The Statutory duty of the Council is to frame and keep a Register of Teachers, and a list of those registered under the conditions prescribed by the Council will be published from time to time. The first list was issued in 1917, and the second one is now in course of preparation.

In addition to its statutory duty, the Council has acted in co-operation with the Board of Education in many important matters affecting the interests of Teachers.

Up to and including the 31st of July, 1919, the number of applications for admission to the Register was 29,700. All qualified Teachers who have not already registered should write at once to :—

THE SECRETARY,  
TEACHERS REGISTRATION COUNCIL,  
47, BEDFORD SQUARE,  
LONDON, W.C. 1.

*A Storm in a Teacup*, by Eden Phillpotts (Heinemann, 7s. net). Medora Trivett lives at Cornworthy, and we make her acquaintance soon after her marriage to Edward Dingle, known familiarly as Ned. Jordan Kellock is a friend of both, and a man of vigorous personality, something of a leader, with engaging qualities which prove irresistibly attractive to Medora. The pair elope to London, and later return to the village, where Medora discovers that Ned is her true mate, and she rejoins him accordingly. This central incident is told in the atmosphere of that Devon which Mr. Phillpotts knows so well, and his accustomed skill in description never fails him. Nor does his power of depicting homely characters amid their surroundings. Lydia Trivett, the mother of Medora, is especially well drawn for us, and the scenes in the paper-mill where she works are described with picturesque detail. It is impossible for Mr. Phillpotts to write a commonplace novel, but for our part we feel that in this book he falls somewhat short of his best. The main incident is a trifle unreal, especially in its sequel. We have the impression of a tragedy gone slightly astray.

Children of all ages owe a special debt of gratitude to Messrs. Longmans, Green and Co. for enlisting the skill of Andrew Lang on their behalf. His versions of the fairy tales and legends of many lands, supplemented by the excellent illustrations of H. J. Ford, are favourites always, and the volumes afford a wealth of choice in the selection of gift books. They are daintily bound, well printed, and not too cumbersome for little hands to hold. Miss Hilda Johnstone has prepared an attractive collection of the myths of Greece and Rome, with illustrations by D. M. Payne. Finally we recommend for older readers the excellent story by Jefferson Carter, entitled "Madam Constantia," already reviewed in our columns. It is an interesting companion for a journey.

*Our Atlantic Attempt*, by H. G. Hawker and K. Mackenzie Grieve (Methuen, 3s. 6d. net). Major-General J. E. B. Seely has written a short preface to this book, which is a straightforward and interesting account of the plucky effort which the authors made to cross the Atlantic by aeroplane. They failed, it is true, but their failure was not due to any want of skill or forethought, and the dramatic sequel to their adventure will long be remembered. The book has some interesting photographs and a full description of the engine of their machine.

"*Quoth the Raven*," an Unofficial History of the War, by E. V. L. and G. M. (Methuen, 1s. 3d. net). Briefly we urge everybody to buy, borrow, or "convey" this little volume with all speed. It is a sheer joy, alike in its bright record of the war at home and in the humorous illustrations drawn by Mr. George Morrow, who has a painful knack of drawing absurd faces which remind one of real people and of one's own reflection. Mr. E. V. Lucas suggests absurd actions which also are painfully like the real actions of certain people on the "home front." The satire is always fair and delicately pointed.

## Education.

HEREDITY: by Arthur J. Thomson. (John Murray. 15s. net.)

This is the third edition of Professor Thomson's well-known book. The first edition appeared in 1907, and at once attracted wide attention and roused a certain amount of hostile criticism, as was inevitable in a work dealing with such an extremely difficult subject and one that is so full of controversial matter. But critics neither could nor did suggest that Professor Thomson made a partisan statement. The book is one of the fairest that has ever appeared on any subject, and though in this new edition the author acknowledges that he has learnt a little from his critics, the value and the charm of the book are to be credited to him alone. Professor Thomson takes his place in the succession of the rare spirits who combine admirable expression with scientific accuracy and scientific spirit—the line of Huxley and Tyndale. Scientific books need constant renewal. Huxley used to say that the life of a physiological fact was a short if not a merry one, and it had to go through a rapid series of metamorphoses in order to preserve its status. This is why a book of this kind needs constant renewal. The student feels much more sure of his ground when he knows that he has under his eye the last word of his master. The student of education, for example, will feel happier in dealing with his own subject after he has read Dr. Thomson's new version of his famous chapter on the *Transmission of Acquired Characters*. This chapter by itself makes the book valuable to the educator, though none of the others can be said to be alien to those who specialise on education. A.

## English.

NELSON'S ROYAL SCHOOL SERIES: THE VICTORY READERS: Books 1-4. (Thomas Nelson and Sons, Ltd.)

These handy little volumes are well bound and are printed in good type on paper which is adequate and indeed good for these days. The stories and verse are well graded, but it is not easy to understand why it was apparently thought desirable to interrupt certain of the longer pieces by putting in matter of a different kind. Some power of sustained attention might be looked for even in young children, especially as the longer sketches are in themselves interesting.

GATEWAYS TO BOOKLAND: Books 1-6. (McDougall's Educational Company.)

This admirable series of reading books is divided into six parts, beginning with "A Wreath of Golden Blossoms" and ending with a volume entitled "In King's Gardens." With excellent judgment the compiler has chosen passages from real folk tales and literature in place of the melancholy pieces which so often result from the effort to write down to the child's level. A practical experiment has shown us that these Readers are very attractive to young children and that the coloured illustrations are greatly admired. This is one of the best series of reading books we have seen, alike in its contents, printing, and binding.

## Modern Languages.

F. A. Hedgcock: PITMAN'S PROGRESSIVE FRENCH GRAMMAR. (Isaac Pitman. 5s., 6d. net.)

A Primitive Direct Methodist of the straiter sort would condemn this book out of hand. The offensive inclusion of the publisher's name in the title, the use of the word "Grammar" in the sense of a complete instruction book, and the Ottoesque appearance of the contents are not prepossessing.

But we are determined to give credit for good and careful work in whatever guise, and no fair-minded reviewer, if he has fulfilled the modest condition of a rapid perusal, can fail to perceive the immense amount of labour and care expended in the production of this work.

Nor is it so old-fashioned in its method as might at first appear. It is true that a great deal of sentence translation from English into French appears, and the whole instruction is centred round the grammar (instead of the grammar being made a handmaid to the teaching of useful expressions), two practices with which we dealt in the April issue, on page 142.

The latter procedure is really quite unnecessary, because learning expressions that one knows the *total* meaning of, but cannot analyse grammatically, has a special value of its own.

One will learn accurately what one cannot hope, if it is forgotten, to reconstruct from one's knowledge of rules.

And these parrot-learned expressions are of immense use, later on, as illustrations of the rules that apply to them, and as models for the formation of analogous expressions. Their value lies then in the fact that having been learned before the student was sufficiently advanced to make any sentences of himself, they are much freer than what is learned at a later date, from the risk of unconscious alteration. Thus a student who has never learned rules for French gender will not change *un arbre* to *une arbre* because of the final *e*.

We are therefore convinced that the grammar should be detached from the reader, and that one's grammatical knowledge should be allowed gradually to overtake one's knowledge of whole expressions. As Sweet suggests what one learns should be analysed "as far as the student's knowledge will allow," and the rest simply learned as one learns new words such as "man," "dog" (for the formation of which there *are* of course no rules at all, except in invented languages such as Bishop Wilkins's).

Thus one is left free to develop a natural reader entirely on the lines of *useful matter*, and such unnatural, portmanteau, Prendergast sentences as *Le frère et la sœur mangent du pain, du beurre et du fromage* are eliminated for ever. (The sentence in question is an illustration; but illustrative sentences should be learned by heart, and *should be such as are worth learning by heart FOR THEIR MATTER.*)

Even for the immediate purpose of illustration, the natural sentence is right, the Prendergast portmanteau wrong. *A useful sentence emphasises the utility of the rule.* The bizarre sentence suggests that the rule it illustrates applies only to what is bizarre.

(Continued on page 310)

# Mr. Heinemann's List of New Fiction.

## YELLOW LEAF

By **SACHA GREGORY.**

7/- net.

An absorbing story of a protracted duel between two masterful personalities, with an unexpected and highly dramatic ending.

## A SAILOR'S HOME

By **RICHARD DEHAN.**

7/- net.

A volume of short stories by the versatile author of "The Dop Doctor."

## STORM IN A TEACUP

By **EDEN PHILLPOTTS.**

29, BEDFORD STREET, STRAND,  
LONDON, W.C. 2

Were grammar an end instead of a mean, the policy of devoting each reading section to a grammatical point would still be open to question, for repetition, to be effective, should be at intervals. Especially if the pupil is quick-witted enough to see what is being done, he will find the process distasteful; and it takes away all the budding linguistic joy in keeping his eye open to note constructions as they arise.

But numerous Direct Method exercises are gradually introduced, as well as very interesting reading matter, and such strictures as we are forced to pass bear not so much on the general plan as on the details of its execution.

What a pity books of this type are not reviewed before, instead of after, they are published. We very much require a clearing-house for ideas and criticisms, such as the International Students' Bureau is endeavouring to provide; for by this means a great many serious defects could be eliminated, and the present tendency for every bright idea to be styled a "method," and to have a book to itself, would yield to a system which could develop that *standardised and permanent* method we crave for.

An obvious example of the waste resulting from individualism in a sphere where individualism has no right to exist is the unfortunate omission of phonetic transcriptions from the English-French vocabulary. As this contains words not in the French-English, the student gets no help in such an important matter as the pronunciation of *aristocratie*. On the other hand the author must be most heartily thanked for his transcriptions of difficult words resulting from inflection, such as *emploierai* [aplware], *essuieront* [esyiro], *créerai* [krere].

In regard to the absence of any consistent effort to keep distinct the written and the spoken idioms, we must still cry out as one of few voices in the wilderness. Dr. Hedgcock tells us, in so many words, that the *Passé Défini* is not used in spoken French, but the reading and exercises are full of it, in spite of the author's own admirable remark in the preface that "it is not sufficient to be acquainted with the rules of a foreign modern language;" (Why only a modern one?) "they must, by constant practice, become so familiar that they can be applied as instructively as those of the mother-tongue."

Then why not let the student practise the *Passé Indéfini*, and so—

1. Inculcate a colloquial usage;
2. Avoid inculcating a non-colloquial usage;
3. Take advantage of a priceless instrument for teaching the correct use of auxiliary *avoir* and *être*.

The past subjunctive is another tense that should not exist for the student till he has a thorough mastery of spoken French, and is seriously engaged in the acquisition of the book language.

We must take most violent exception to Dr. Hedgcock's reactionary behaviour in attempting to justify idiom by means of pseudo-logical explanations. The statement that "the effect of the subjunctive in *C'est l'homme le plus riche que je connaisse* is to tone down the absolute force of the superlative (p. 224) is utter nonsense; and it shows what a man will be reduced to when he determines at all costs to bolster up such an archaic and absurd Teutonic *a-priorism* as that on p. 212: "The subjunctive is the mood of the possible, doubtful, desirable, but not of the certain fact." The word "soyez" in "Je suis content que vous soyez arrivé," certainly expresses no doubt, nor does the indicative in clauses depending on *espérer* (*J'espère qu'il ira vous voir*) indicate any sort of certainty.

The dictum, on p. 349, that "the student must remember that the mood of the verb in the subordinate clause is *not* decided by the kind of clause *nor* by the conjunction that connects it with the principal, but by the *meaning of the clause* itself and *the way it is desired to express that meaning*" has everything in its favour except truthfulness, the plain fact being that in the vast majority of cases the subjunctive follows certain quite mechanical rules.

The statement on p. 212 (foot-note) that the subjunctive "can only be employed in a subordinate clause introduced by a conjunction, which is always *que* or some compound of *que*" is an obvious slip, but a slip of the kind that ought certainly never to find its way into print, and that the International Students' Bureau exists to make impossible.

This book (like Mr. Manison's French Grammar—Harrap) which we shall review in our next issue, removes *recevoir* from the company of regular conjugations, where it had reposed too long. We hope that no grammar will, on historical grounds, restore the title of "regular" to a type exemplified in a dozen verbs!

W. H. Hudson: *SHORT HISTORY OF FRENCH LITERATURE* (with a memoir of the author by A. A. Jack). (Bell and Sons. 6s. net.)

While it is the business of a reviewer to criticise, it would be mere perverseness to hunt about for faults in a book which gives no cause for complaint of any sort. On the other hand it would require long use to become fully acquainted with its positive merits. What the reader of reviews likes to know in a case like this is the proportions of the book. In a work of 300 pages, 24 are given to mediæval literature, 51 to the Middle Ages and the sixteenth century together. The 18th and 19th centuries together take up more than half the book—the 18th, 50 pages, the 19th 120 pages. Most of our readers will probably agree that this distribution shows good judgment. It is not a question of the comparative values of the mediæval and the later literatures: it is simply a case of dealing with one language at a time. And as *Sun desire quant en ad vers Deu tendut* cannot be called French (in the sense of the language spoken and written now by Frenchmen), literature of this type should, in a History of French Literature, occupy, as it does here, a subordinate and introductory position.

G. P. Krapp: *THE PRONUNCIATION OF STANDARD ENGLISH IN AMERICA*. (Oxford University Press. 7s. 6d. net.)

We can never give whole-hearted praise to a book on pronunciation which uses disproportionate space for the phonetic representation of dialect—such as the Bowery dialect (in a speech from Shakspeare!) or the elocutionary dialect appropriate to Keats's wonderful "Darrien" sonnet.

What the foreigner wants (whether the language in question is nationally, or only socially, foreign to him) is to know how the natives speak. Once he is at home in their normal speech, he can soon attend to special dialects if he has time and inclination.

However, Professor Krapp's technical work is good and thorough, though we quarrel with his view of the difficulty of representing intonation. In "*Intonation and Emphasis*" (published for the International Phonetic Association) the present writer used figures for the purpose, in such a way as to show the rise and fall very much more clearly than any curve, and at far less expense.

Readers must be warned against using the transcriptions without the very detailed explanations which Professor Krapp provides. People still exist who imagine that the letters used have an intrinsic significance. It cannot be too strongly emphasised that a phonetic transcription cannot do more than show the distribution of sounds elsewhere described. If this were realised, we should not have Mr. Bernard Shaw declaring that Henry Sweet admits that Londoners—even educated ones—say "bat" for "but." As a matter of fact Sweet merely used the sign [a] for the vowel-sound in "but"—that is all.

The insufficiency of script without description is illustrated by the sign [au] commonly used for the English diphthong in "now," and used by Professor Krapp for the American diphthong in the same word. There is a striking difference between our sound and their's, but it would be impracticable to have so minute a script as to dispense with the necessary explanations.

It is interesting to read that "it is doubtful if, on the whole, American cultivated speech is any slower than British speech"; but when one remembers that the charge we bring against all other foreigners is that they speak their languages too fast, one cannot help thinking there must be something in the impression Englishmen receive that American speech is particularly deliberate, showing a tendency to apply the principles of their constitution to speech as well as to humanity, by claiming for each syllable a separate, free, and independent existence.

Professor Krapp is particularly good on the question of correct speech. Some of his notes are well worth laying to heart.

"Wherever a question of choice between two pronunciations arises, there is rarely any difficulty in making a choice after the facts are known. It is the province of a book like this to show students how they may become sure of their facts, not to make their choices for them."

"Both habits of speech" (the British and the American) "it need scarcely be said, are established by convention, and one is not more conscious or affected than the other."

"Levels of speech. . . Natural or normal speech differs from precise speech, which is largely self-conscious and theoretical, and it differs also from slovenly speech with which the precise speaker is inclined to confuse it. . . Ungrammatical or dialect speech is not necessarily slovenly, and in fact it is often the reverse, being frequently very crisp and energetic. The appeal . . . must always be to the ear. . . To attempt to regulate

(Continued on page 312.)

**A SELECTION FROM**

- How to Play Golf.** By HARRY VARDON. With 48 Illustrations. 10th Edition. Crown 8vo. **5s. net.**

**CLASS BOOKS FOR LOWER FORMS  
OF SECONDARY SCHOOLS.**

- Arithmetic, Preliminary.** By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 2s. With Answers, 2s. 3d. This Book provides a course of Arithmetic suitable for pupils of ten to fourteen years of age.  
 "The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—SCHOOL GUARDIAN.
- Arithmetic, The Primary.** Edited by WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. In Three Parts. Parts I and II, 10d. each. Part III, 1s. 3d.  
 An Introductory Course of Simple Arithmetical Exercises, covering all the subjects usually taught in schools.  
 "The examples increase in difficulty by almost imperceptible stages, and they are very suitable for young scholars."—NATURE.
- Chemistry, Preliminary.** By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 2s.  
 A course for beginners dealing with the leading principles of chemical theory.  
 "An excellent book. will make a clear understandable foundation for a systematic treatment of chemistry in the higher forms."—  
 EDUCATIONAL NEWS.
- English Course, Preliminary.** By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School. 2s.  
 "An excellent first course in English grammar and composition suitable for the lower forms in secondary schools."—SCHOOLMASTER.
- Experimental Science, Preliminary Course of.** By W. M. HOOTON, M.A., M.Sc. 2s.  
 A detailed course of science training for beginners in accordance with modern ideas.
- History of England, Preliminary.** By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, B.A., Cambridge Geography Diploma. With Illustrations. 2s. 9d.  
 "In addition to an outline of political events it tries to give some idea of social and constitutional development and also to connect history with geography. It is clearly written and well illustrated."—SCHOOL WORLD.
- French Course, Preliminary.** By H. J. CHAYTOR, M.A., and H. E. TRUELOVE, B.A. Second Edition. 2s.  
 "An excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the direct method."—ATHENÆUM.
- Geography, Preliminary.** By E. G. HODGKISON, B.A., F.R.G.S., Assistant Master, Crewe County School. 2s.  
 A book for beginners, containing Elementary Physical Geography, an outline of the Geography of the World, and the Geography of the British Isles in detail.  
 "An admirable textbook, clear, direct, and well suited to the needs of pupils for whom it is intended."—LITERARY WORLD.
- Geography of England and Wales, A Preliminary.** By ERNEST YOUNG, B.Sc., F.R.G.S., Head Master, County School, Harrow. 1s. 6d.  
 This book cannot be used without an atlas, and is generally suitable for the lower forms of schools.  
 "A capital book, written in simple language, and containing abundant sketch maps of the right kind."—LONDON TEACHER.
- Geometry, Preliminary.** By F. ROSENBERG, M.A., B.Sc. With or without Answers. 2s. 9d.  
 A book for beginners containing a judicious blending of practical and theoretical work. Insists throughout on reasoning from first principles.  
 "The book is certainly one to be recommended."—  
 PREPARATORY SCHOOLS REVIEW.
- Plant and Animal Biology. A First Course in.** By W. S. FURNEAUX. 2s. 9d.  
 "For beginners this little book should prove a very attractive introduction to the study of plant and animal life."—SCHOOLMASTER.
- Spelling and Punctuation (with Pieces for Dictation).** By HARRY SNOOSMITH, M.A., Modern Language Master, Wandsworth Technical Institute Secondary School. Second Edition. 1s.  
 "Very seldom have we seen any book which deals so thoroughly with the difficult subject of teaching and learning to spell."—EDUCATIONAL NEWS.

speech by the visible word lands one in countless absurdities. . . . One cannot do better than direct attention to the unconstrained speech of educated and well-bred persons. The decision who such persons are must be left to individual judgment. The speech of formal discourse differs from the speech of familiar conversation. . . . It would be as much an error to speak formally when the situation called for familiar speech as to speak colloquially in a formal situation."

Professor Krapp makes one mistake when he says the final consonant in "egg" is short (p. 41). All final consonants are long when they follow a short vowel, in American as in British English. German has short final consonants in such cases, and the effect of abruptness certainly strikes American as much as English ears.

H. O. C.

## Mathematics.

**PROJECTIVE GEOMETRY:** Vol. I, by Oswald Veblen and John Wesley Young (1910); Vol. II, by Oswald Veblen (1917). (Ginn and Co.).

The term "Projective Geometry" is used in two different senses. Elementary Geometry deals mainly with relative magnitude, which implies measurement; but there are geometrical theorems which are not concerned with relative magnitude but with relative position, *e.g.*, of points on a line. As these latter properties are usually not altered by projection, they are in one sense called "projective," the others being "metrical." In another sense, the distinction is between projective and descriptive geometry; the difference being that in the former every two straight lines in a plane intersect, while in the latter this is not necessarily the case. It is in the second sense that the term is used by Profs. Veblen and Young in the title, though in the preface a distinction is drawn between the projective and the metric.

The discovery of non-Euclidean geometry made it clear that geometrical axioms are not necessary and self-evident truths but assumptions; and different assumptions give rise to different kinds of space. The general assumptions made in the work under review are collected in the first chapter of the second volume. There are three assumptions of "alinement" (if we may use the English spelling) and five of "extension"; an assumption of projectivity (a projectivity being the resultant of a sequence of perspectivities); and a further one which may be called a harmonic assumption. Comparing these, for convenience of reference, with the axioms given by A. N. Whitehead in *Encycl. Brit.*, 11th ed., xi. 731, it will be seen that the first eight are practically equivalent to axioms 2-7 (axiom 1 being apparently unnecessary, since it is covered by 2 and 4), and the tenth to axiom 8, while the ninth is an assumption leading to the "fundamental theorem of projective geometry." Further assumptions, appearing in the second volume, relate to continuity order, etc.; but some of these are already implied in the ninth assumption. The first eight assumptions are universal: any space satisfying these but not involving others is called a general projective space, and particular kinds of projective space are determined by introducing one or more of the remaining assumptions. Thus we have "rational" projective spaces and "real" projective spaces, whose points correspond to the systems of rational and real numbers. The real spaces, and also complex space, involve the assumption of continuity. In the first volume the assumptions on which each theorem is based are stated either at the beginning of the chapter or in brackets after the theorem; this has not been found possible in the second volume.

The work is intended for senior and graduate students in universities, and no doubt meets a want. But the subject is of a general interest, and it might perhaps have been possible to treat it in such a way as to appeal to a larger circle of readers, without detracting from its main purpose. From this point of view, there are three respects in which criticism suggests itself.

First, although the amount of ground covered is very great, it is difficult, on account of the consecutive nature of the reasoning, to isolate any portion for separate study. It is true that the earlier portion of volume II, leading up to Euclidean plane geometry, may be read without the later portion of volume I; but this is not enough. What is required is a scheme to show the connection of the various portions of the work, and to facilitate skipping. In the absence of such a scheme, recourse must be had to the index, which seems fairly complete.

Next, the phraseology should be simpler and more suggestive, and also more exact. "Corresponding," for instance, is better than "homologous"; as the words are treated as synonymous, one ought to be sufficient. "Invariant," again, is a technical term: it is unnecessary to use it when "unaltered" would do

as well. "Perspectivity" and "projectivity" are clumsy words, but must presumably be regarded as established; the former, no doubt through oversight, is not separately defined at all, while, as regards the latter, the paragraph in which it is defined as a projective correspondence is followed almost immediately by one stating that it establishes a correspondence—*i.e.*, the word is used as meaning both the operation of projecting and the relation resulting from this operation. Again, the phraseology of "pencils" is obscure. In chapter I of the first volume a line is stated to be an undefined class of points—*i.e.*, to consist of points; and a plane is a defined class of points. In chapter III a pencil of points is defined as the figure formed by the set of points on the same line—*i.e.*, as the figure formed by a line; and the line is called the axis of the pencil. There is a similar definition of pencil of lines. This implies that a line or set of lines, and the "figure" formed by the line or set of lines, are things of different kind. But the implication is rebutted not only by the fact that a pencil of points or of lines, and the set of points on a plane, are grouped together as geometric forms, but also by the definition of a point conic, which treats a pencil of lines not as a "figure" formed by lines but as the lines themselves. Thus we come round to the statement that the line is the axis of itself. The truth seems to be that in dealing with perspective and projective it is impossible to keep up the fiction that a line is made up of points: we have to revert to the vulgar view that a line is the locus of points—something on which, so to speak, the points are strung.

Finally, fundamental assumptions should be as simple as possible. This condition is satisfied by the earlier assumptions; but the assumption of continuity is very complicated, and the assumption of projectivity does not really seem more acceptable, intuitively, than the fundamental theorem of projective geometry, which it is used to prove, and of which it is a particular case.

W. F. S.

**AN INTRODUCTORY TREATISE ON DYNAMICAL ASTRONOMY:** by H. C. Plummer, Royal Astronomer of Ireland. (18s. net. Cambridge University Press, 1918.)

This useful work is intended as a mathematical introduction to several different but related branches of astronomy. The earlier chapters deal with such preliminary matters as the law of gravitation, potentials, and elliptic and parabolic motion. Then follow sections dealing respectively with determination of orbits, planetary theory, lunar theory, and the rotation of earth and moon. The student whose mathematical attainments enable him to master these will then be in a position to proceed to the more advanced memoirs on special problems.

**DIFFERENTIAL EQUATIONS:** by H. Bateman, Ph.D. (16s. net. Longmans, Green and Co., 1918.)

This is a handy and lucid introduction to the theory of differential equations. A special feature is the number of illustrative equations occurring in dynamics and physics.

**NUMBER STORIES OF LONG AGO:** by David Eugene Smith. (Ginn and Co. 2s. 3d. net.)

**NUMBER PUZZLES.** (6d. net.)

Number Stories is a simple tale of the progress of mankind in matters of numbering. It begins with a fable concerning Ching, who could not count beyond three, and passes on to the mode of writing numbers and the way of reckoning among ancient peoples—Babylonians, Egyptians, Greeks, Israelites, and Romans. Indian and Arabic numerals are also described. This interesting record is given in the form of a series of tales to children, very well told, and such as might well be used for school work, to mitigate the dullness of the arithmetic lesson. The companion pamphlet, entitled Number Puzzles, contains solutions to the problems propounded in the larger book. A word of praise should be given to the diagrams and illustrations. Altogether this is a novel and fascinating piece of work.

## General.

**THE BOOK OF COMMON PRAYER IN ESPERANTO.**

We have received the first part of the Esperanto translation of the Book of Common Prayer, issued under the auspices of the "Church Esperanto League" (Hon. Sec., Rev. A. J. Ashley, Farnley Tyas Vicarage, Huddersfield). The whole work is to be completed in five parts, priced at 8½d. each, post free. The publication of this work forms an important addition to the growing literature of the idiom designed to discharge the rôle of an international speech. The Esperanto New Testament was published seven years ago by the British and Foreign Bible Society. Parts of the Old Testament have also appeared, and the restoration of peace will render possible the publication of the whole.

## HARBUTT'S NOV-LART.

The Art of Stencil Picture Making.

A FASCINATING AND EASY PASTIME FOR ALL.

Make your own Birthday Cards, Christmas Cards, Calendars and other items for which all sorts of uses may be found.

NOV-LART pictures fetch good prices at Bazaars and Sales of Work.

**HARBUTT'S PLASTICINE, LTD.,** 203, Bathampton, Bath.  
London Showroom : 56, Ludgate Hill, E.C. 4.

## DALCROZE EURHYTHMICS CLASSES

to suit the convenience of Teachers are held in the LONDON DISTRICT and in BINGLEY; BIRKENHEAD, BOURNEMOUTH, BRIGHTON, BRISTOL, DURHAM, EDINBURGH, HULL, KETTERING, LEEDS, LITTLEBOROUGH, LIVERPOOL, MANCHESTER, NEWCASTLE-ON-TYNE, NORTHAMPTON, OLDHAM, OXFORD, PORTSMOUTH, READING, SHEFFIELD, SOUTHAMPTON, SOUTHWEND-ON-SEA, SUNDERLAND, TAUNTON, and TUNBRIDGE WELLS. Details on application to—

**The DALCROZE SCHOOL OF EURHYTHMICS, LTD.,**  
23, Store Street, London, W.C. 1.

## THE NATIONAL SOCIETY OF ART MASTERS

Patron: HIS MOST GRACIOUS MAJESTY THE KING.

SCHOOL DRAWING CERTIFICATE FOR TEACHERS IN  
ELEMENTARY SCHOOLS.

The Examinations are held in May. Entries close on March 24th.  
EXAMINATIONS IN DRAWING FOR SECONDARY AND OTHER  
SCHOOLS.

The Examinations are held in June. Entries close May 10th.  
INTERNAL EXAMINATIONS IN SCHOOLS OF ART AND ART  
CLASSES.

Dates are arranged to suit individual Schools.

Copies of these schemes and forms of application may be obtained on  
application to the Secretary,

**ALFRED SHUTTLEWORTH, A.R.C.A.,**  
45, Bedford Row, London, W.C. 1.

## THE GREAT GAS SAVER.

THE ECONOMIC ONE-RING

**WIFESJOIE**

GAS COOKER WITH HOT WATER

Will positively REDUCE Your Gas Consumption apart from its enhanced service.

**BAKES, BOILS, ROASTS, GRILLS, and TOASTS to PERFECTION,** and supplies Hot Water for the Bath and other Domestic requirements simultaneously, with a gas consumption of 35 feet per hour = an average cost of 2d.

Demonstrations Daily. Full particulars on application to Dept. 41.

**LONDON WARMING & VENTILATING CO. LTD.,**  
29, Newman Street, Oxford St, London, W.1.  
Makers of the well-known "Kookjoie" Range.

By Special

Appointment.

To their Majesties the King and Queen and H.M. Queen Alexandra,

## WINSOR & NEWTON, Prepared Water Colours

IN

WHOLE and HALF CAKES, WHOLE, HALF, and  
QUARTER PANS,  
and WHOLE, HALF, and LARGE TUBES.

Quarter Pans of Winsor and Newton's Artists' Water Colours are of the same outside dimensions as the Half Pans. They may, therefore, be used in Winsor and Newton's range of Half Pan Japanned Boxes.

The advantages of habituating the Student at the outset of his career to the use of the BEST materials are so obvious that no attention need be drawn to them.

Messrs. Winsor and Newton's Artists' Water Colours are necessarily more expensive than those usually manufactured for School use, but as, owing to their superior strength, a small quantity yields approximately the same amount of colour surface as the larger pans of Water Colours generally sold for Students' use, the expense in both cases is much the same.

The special attention of Teachers and the public is, therefore, invited to these Quarter Pans of Colour, which, costing practically the same, provide the Student with a superior article.

Full detailed catalogue may be obtained from any of the leading Artists' Colourmen throughout the Country, or from 39, Rathbone Place, London, W. 1.

Established nearly a Century.

## BLACKIE & SON'S NEW LIST.

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

### The Groundwork of British History.

By **GEORGE TOWNSEND WARNER, M.A.**, sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School: Author of "A Brief Survey of British History," &c.; and **C. H. K. MARTEN, M.A.**, Balliol College, Oxford; Assistant Master at Eton College. With Maps, Time Charts, and Full Index. 764 pp., super-crown 8vo. **7s. 6d.** net. Complete in One Volume. In Two Parts, **4s. 6d.** each net. Part I, 55 u.c.—1603; Part II, 1603—1911.

For the convenience of those requiring the book for certain examinations it is also issued—  
In Three Sections, **3s. 6d.** each net:—Section I, 55 u.c.—A.D. 1485; Section II, 1485—1714; Section III, 1714—1911.

#### A NEW GRAMMAR BOOK

By **AGNES CATNACH, B.A.** (Lond.), Assistant Mistress at King Edward's Girls' High School, Birmingham. **2s. 6d.** net.  
This book seeks to connect more closely the formal study of language with adequate expression of thought, and to attain this end all the work is based on the study of the sentence. It is hoped that to children studying on these lines English Grammar will be a subject of living interest, and that the various facts of grammar will gain that logical connection which they so often seem to lack. The matter has been set forth as simply as possible, and in a manner to retain the interest of the pupil.

#### SOME PRACTICAL HINTS FOR THE YOUTHFUL HISTORIAN.

By **C. H. K. MARTEN, M.A.**, Balliol College, Oxford, Assistant Master at Eton College. **3d.** net.  
N.B.—The above is No 1 of a Series entitled "Aids to the Study of History."

#### THE GOLDEN BOOKS OF ENGLISH VERSE.

A Graduated Course for Class Study. Arranged by **FRANK JONES, B.A.**, Senior English Master, King Edward's School, Aston, Birmingham. In Three Books. Book II, now ready. **2s.** net. Books I and III in preparation.  
The chief feature of this series is the teaching apparatus provided at the end of each poem. The objects kept in view in drawing up these aids have been to save the teachers' time, and to provide the pupils with an instrument by which they might test the thoroughness or otherwise of their understanding of the poem studied. Each teacher will no doubt supplement them as necessity arises; and to the pupils who have studied a poem in order to answer the questions asked, the aids will suggest other points for further consideration with the help of the teacher.

#### A BOOK OF ENGLISH HISTORY FOR CHILDREN. Part I.

By **LILIAS MILROY**, Head Mistress of the Leamington High School for Girls, and **ELIZABETH M. BROWNE**, Formerly Assistant Mistress in the Truro High School for Girls. **2s. 6d.** net.

This history book seeks to steer a course between those mere "outlines," which are bound to be lacking in interest for young children, and the books of stories from history, often delightful to the readers, but apt to be rather too bulky for use as textbooks. The aim of the authors has been to select carefully the more important movements and the more picturesque incidents of history, and in connection with these to give those ample details which children love, and at the same time to preserve a clear chronological sequence.

#### A RAPID SURVEY OF ENGLISH LITERATURE.

By **E. H. BLAKENEY, M.A.**, Winchester College. **2s.** net.  
"A wonderfully comprehensive selection of brief characteristic extracts, with notes of the times and peculiarities of the writers, and will be found a very interesting book."—GUARDIAN.

#### ENGLISH PROSE EXTRACTS FOR REPETITION.

Selected and edited by **E. H. BLAKENEY, M.A.** **9d.** net.  
"Mr. Blakeney has done very useful work in producing this little book of prose extracts, fine examples of prose for the use of schools. Extracts from writers such as Gibbon, Scott, Matthew Arnold, Shorthouse, Pater, George Meredith, Ruskin, and some quite recent writers are brought together."—TIMES.

A NEW SERIES OF FRENCH HISTORICAL READINGS FROM ORIGINAL SOURCES.

### Épisodes Mémorables de L'Histoire de France.

General Editor: **LOUIS A. BARBE, B.A.**, Officier d'Académie.

**PRISE DE LA BASTILLE**, from Michelet's *Histoire de France*.

**LA ROUTE DE VARENNES** " " "

**LES FRANÇAIS A LA 1<sup>re</sup> CROISADE**, " " "

STRONGLY BOUND IN LIMP CLOTH PRICE **9d.** EACH.

#### BLACKIE'S LONGER FRENCH TEXTS.

From Modern French Literature. Printed in large, clear type, with brief Notes, Exercises, Phrase List, and Vocabulary. Fcap. 8vo, **10d.** each net.

#### COURS DE FRANÇAIS, d'après les Textes

By **M. ANCEAU** and **E. MAGÉE**, Edgbaston High School for Girls, Birmingham. Cloth boards, **2s. 6d.** net.

#### A SKELETON FRENCH GRAMMAR.

By Professor **ATKINS, M.A.**, King's College, London. The "irreducible minimum" printed in red and black. **2s.** net. With Exercises, **2s. 6d.** net. Exercises only, **1s. 6d.**

#### A JUNIOR FRENCH COURSE (First Year).

By **E. J. A. GROVES, Lic. & L.** (Senior French Master, Bradford Grammar School). Fully illustrated. Cloth extra. **2s. 6d.** net.

#### BLACKIE'S LITTLE FRENCH CLASSICS.

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo. **6d.** each.

#### LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By **E. MAGÉE**, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other Illustrations. Fcap. 4to. **2s. 6d.**

#### LE LIVRE BLEU.

A second Book of French in Coloured Pictures. By **E. MAGÉE**. With sixteen full-page Coloured Pictures and many other Illustrations. **2s. 6d.**

THE  
TEACHERS REGISTRATION  
COUNCIL.

Representative of the Teaching Profession.  
Constituted by Order in Council  
29th Feb., 1912.

The Council maintains an Official Register of Teachers who have been accepted for admission under the Conditions of Registration.

The Register is open to qualified teachers in every branch, and until the end of 1920 experience under approved conditions is the sole qualification required. After that date the conditions will become more stringent.

Particulars and Forms of Application may be obtained from

THE SECRETARY,  
Teachers Registration Council,  
47, Bedford Square,  
London, W.C. 1.

THE  
COLLEGE OF PRECEPTORS.  
Incorporated by Royal Charter.

BLOOMSBURY SQUARE, LONDON, W.C. 1.

LECTURES FOR TEACHERS.

A Course of Twelve Lectures on "Problems of the Practical Teacher," by Professor John Adams, will begin on Thursday, the 25th of September, at 6 p.m. The Syllabus may be obtained from the Secretary.

TRAINING COURSE FOR  
TEACHERS OF COMMERCIAL SUBJECTS.

A Course of Training for Teachers of Commercial Subjects, and for those intending to become teachers of such subjects, will begin on Thursday, the 25th of September. The Course will include attendance at lectures and discussion classes, and teaching under supervision.

Particulars may be obtained from the Secretary.

MEMBERSHIP.

Membership of the College is open, under certain conditions, to persons engaged in education.

Particulars concerning the privileges of membership may be obtained from the Secretary.

THIS ISSUE  
CONTAINS :

Essays on School Government, The Headmaster, Can These Bones Live? Verse by Fred Richards, News of the Month, and a Supplement on Commercial Teaching.

THE INCORPORATED SOCIETY  
OF MUSICIANS.

Founded 1882. Incorporated 1892.

OBJECTS OF THE SOCIETY.

The objects for which the Society is established are the promotion of whatever may tend to the elevation of the status, and the improvement of the qualifications, of all Members of the Musical Profession, or may aid the musical education of the people.

ADVANTAGE OF MEMBERSHIP.

A Benevolent Fund for Members, the Regulations for which have purposely been made as wide as possible in order to meet the many and very varying contingencies which arise from time to time.

An Orphan Fund for the children of musicians, which is open to the dependents of all musicians, whether their parents were members of the Society or not.

Legal advice on all professional matters; Income Tax Claims; Copyright; The Recovery of Fees, &c.

Registers open to members of "Vacant Appointments" and "Engagements," and for the transfer from member to member of pupils moving to new districts.

LOCAL EXAMINATIONS IN MUSIC.

The examinations of the Society, established in 1884, are carefully arranged in a systematic series of Progressive Grades, embracing a complete course of musical study, and constitute a most valuable guide, for Teachers in recording the progress of their pupil.

Full particulars may be obtained upon application to the GENERAL SECRETARY, 19, BERNERS STREET, W. 1

# SCHOLASTIC APPOINTMENTS

University Men and Women seeking scholastic appointments should apply to

## **Truman & Knightley** SCHOLASTIC AGENTS LTD

who introduce ASSISTANT MASTERS AND MISTRESSES to the majority of the leading Public and Private Schools at home and abroad.

*Through this Agency, well educated gentlemen with Higher Local and other good Certificates, interested in children and in teaching, can find congenial work in good high-class Private Schools, where the hours are not excessive, conditions pleasant, and the holidays are long. Salaries range from £50 to £100 or more per annum, with board and residence, according to age, qualifications, and experience. There are also many vacancies for Student and Junior Mistresses at salaries of from £30 to £50 per annum with board and residence.*

There is a separate department for

### **LADY MATRONS and HOUSEKEEPERS**

for Schools.

**No charge for registration.**

::

**Moderate commission.**

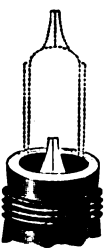

#### **SCHOOLS TRANSFER DEPARTMENT.**

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

**Offices: 158-162 OXFORD ST., LONDON, W. 1**

Telegrams: "TUTORESS, PHONE, LONDON."

Telephone: MUSEUM 1136.

*It needs no shake*

**See Why?** The nib, rising from the ink barrel is always wet. No dried matter encrusts and clogs it.

*Not a splutter in a penful*

**IT'S ALL-BRITISH.**

*It needs no filler*

**See Why?** Its extra large ink barrel presents a mechanism-free opening into which ink can be poured easily from a bottle

*Not a spill in a fill*

**You have probably tried many Pens which have tried you. Why not end your trials and buy a "Whytwarth" ?**

"The pen with the disappearing nib" has none of the drawbacks that make you suspicious of ordinary fountain pens. Science and brain have in it produced the perfect writing instrument. The ink cannot leak or evaporate, it is locked in the pen. The nib is *always* wet and ready to write. The ink-barrel is easy to the hand, holds a lot of ink, and can be filled easily without a filler.

**JOHN Whytwarth**  
*Scientific Unleakable*

**"The Pen with the Disappearing Nib."**

**ENTIRELY BRITISH.**

*Of all Stationers.*

**JOHN WHYTWARTH LD.,**  
14, Ivy Lane, Paternoster Row,  
LONDON, E.C. 4.

*Its nib must suit you*

**See Why?** The 14-carat gold nib is supplied exactly, not merely "near enough," to the pattern of your favourite steel nib.

*Not a scratch in a screed*

From  
10/6 to  
£2 . 2 . 0

*It cannot leak*

**See Why?** The ink is "locked" however the Pen is carried. "Locked" ink will not evaporate either, whatever the climate.

*Not a grumble in a year.*

## LATIN.

### ELEMENTARY LATIN TRANSLATION BOOK.

By the Rev. A. E. HILLARD, High Master of St. Paul's School, and C. G. BOTTING, Assistant Master at St. Paul's School. 2s. 9d.

[JUST PUBLISHED.]

This is a series of pieces specially written in which the authors try to keep the principles of their other books by not introducing at any stage any construction or form which has not already been learnt. The order in which constructions and forms are introduced is that of the authors' **ELEMENTARY LATIN PROSE EXERCISES**, and parallel references are given. The subject-matter drawn upon for the pieces is mainly Roman History, and almost from the start an attempt is made to give a "continuous" narrative in each piece instead of separate sentences.

### ELEMENTARY LATIN PROSE EXERCISES.

By the Rev. A. E. HILLARD and C. G. BOTTING. 3s. A Key, 3s. 6d.; postage 2d.

### BEGINNERS' GUIDE TO LATIN, being a First Latin Translation Book.

By GEORGE G. LOANE, Assistant Master at St. Paul's School. 2s. 6d.

This attempts to provide a self-contained guide for the beginner of Latin. The accidence is given in small portions, and the passages for translation contain only such forms as have been so far learnt. The easier idioms are explained from time to time, and are then used in the translation. The whole accidence is thus covered and most of the elementary constructions come in.

### LATIN PROSE COMPOSITION.

For the Middle Forms of Schools. By M. A. NORTH and the Rev. A. E. HILLARD. 4s. A Key, 6s. net; postage 2d.

### ADDITIONAL LATIN EXERCISES.

By the Rev. A. E. HILLARD and C. G. BOTTING. 3s. A Key, 4s. net; postage 2d.

### CONTINUOUS LATIN PROSE.

By H. J. DAKERS, Assistant Master of Manchester Grammar School. 5s. 6d.

This book is intended for the use of Upper Forms of Schools and to provide for the writing of **Continuous Latin Prose** up to scholarship standard. A fairly complete **Prose Construction and Syntax** is supplied, as well as a careful apparatus. The Exercises have numerous **references at the foot** to establish a connexion between the Syntax and the Exercises. The Exercises have been **tested** in Manchester Grammar School, where the book was in use for a time before publication.

A Latin Version, 6s. net; postage 2d.

### JUNIOR LATIN PROSE.

By H. J. DAKERS. Crown 8vo. 4s.

The aim of this book is to make the transition from the drill of detached sentences to the translation of simple stories as speedy as possible. There are a limited number of exercises of Sentences to give practice in the more important rules of Syntax. It is suggested that the best way of using these is to work through them **orally** with the pupils. These are followed by 130 short pieces, historical or mythological for the most part, for translation into **Continuous Latin**. The exercises and the **Pieces for translation** are all freely supplied with references to the **Syntax**, which it is hoped may thus be absorbed in use. Many of them have already been practically tested in class teaching, and all of them were written in Latin before the English took its final shape.

### LATIN ELEGIAC VERSE COMPOSITION.

By ROY MELDRUM, Assistant Master at St. Paul's School. 5s.

This book of 208 pieces puts into practice the use of Latin Repetition. The selection of Latin and English passages has one common theme, so that the pupil may have a chance of collecting his thoughts to treat one theme adequately, and of becoming familiar with one set of words at a time, instead of passing hastily and in confusion from one set to another.

### ELEMENTARY LATIN ELEGIAC VERSE COMPOSITION.

By ROY MELDRUM. 2s. 6d.  
Latin Version to each of the above.  
Latin Elegiac Key, 6s.; Postage 2d.  
Elementary Key, 5s.; postage 2d.

## NOTES AND COMMENTS.

### The Board and Strikes.

The Board have secured an initial success in the effort to prevent strikes of teachers. It is announced that on the 12th August representatives of the Board, of Local Education Authorities and of the National Union of Teachers held a meeting at Whitehall, when it was agreed to set up a Standing Committee on Salaries. It is understood that this body will be made up of representatives of the L.E.A.'s and of the N.U.T. in equal numbers, with a neutral chairman, and that no decision will be valid unless accepted by a majority of each of the two parties. The first task of the committee is to endeavour to frame a minimum scale of salaries to be published on or before the 15th December next. The Local Authorities have agreed to adopt the scale thus passed and to put it into operation by a date to be fixed.

On its side the N.U.T. has agreed that existing or threatened strikes shall cease, and that the questions in dispute shall be referred to arbitration. Further, it has undertaken to give no financial help to local strikes during the period before the framing of a minimum scale, nor during the period of its adoption by the Authorities, nor afterwards during its operation. The committee will remain in being for the purpose of revising the scale from time to time, and it will also act as "conciliator" in cases demanding special treatment. The first meeting is arranged to be held on the 12th September.

### Arbitration.

It is welcome news that arbitration is to replace strikes of teachers. Our view is that no strike ought to have been allowed to occur. From the beginning the Board should have imposed arbitration as a means of settling salary disputes. Instead of this they have sought to maintain the position, which is technically correct, that the employment and payment of teachers is the business of the Local Authority and school managers. Against this it should have been remembered that the Board are responsible for our National education, including especially the supply of teachers, and that nothing is more potent than a strike in discouraging possible recruits. Nor could anything be worse as an example to the children or in its effect on the life of a school. Under these circumstances the Board would have been fully justified in compelling a resort to arbitration, and their action would have been welcomed by the teachers, to whom, as a body, the strike policy is repugnant in the extreme. The Local Authorities have felt themselves bound to resist demands which threatened to increase the local rate to any great extent. They will probably welcome arbitration as affording them some cover from the criticism of the ratepayers. One thing which is certain is that the salaries must be improved. In many cases teachers are unable to pay their way at present prices, even with the most rigorous economy. We must think of salaries, not in terms of 1914, but in those of 1919.

### Ominous Signs.

It remains to be seen whether the Board's plan will prove effectual. Already there are to be heard strong protests concerning the constitution of the teachers' side of the Standing Committee. The National Federation of Women Teachers has demanded separate representation on the ground that the question of equal pay is too important to be left to the N.U.T. It is suggested that when the London teachers return from their holidays they will be ill-content to find their employers have been afforded a plausible reason for deferring any further consideration of the London salaries until the Standing Committee's scale is published. Probably the Board considered that as the N.U.T. is the only body which can command the strike fund there was no need to consult other associations of teachers. It would have been good policy, however, to cast the net as widely as possible bringing in representatives of all bodies of teachers likely to be affected by the committee's decisions. This view is strengthened by the information that the committee will consider questions other than salaries. Can it be that it is intended to serve as a harmless and powerless substitute for a National Council such as might be projected on the lines of the Whitley report? If so, it can only be said that the scheme is too clever by half. A Whitley Council for Education can be formed only on thoroughly representative lines with due regard to the interests of all types and classes of teachers.

### A Difficult Problem.

It may be held that a National Council for Education on the lines of the Whitley Scheme is undesirable or impossible. It will be agreed that education is wholly different from an industrial enterprise aiming at the direct production of wealth. The division of the wealth produced in such enterprises is perhaps the greatest factor in causing that unrest which it is hoped to allay by the Industrial Councils now being established in many trades. There is, however, another important factor, namely, that the workers in these trades have begun to desire some share in managing affairs. They are no longer content to be parts of a machine and to accept conditions which they have no part in bringing about nor any power to alter.

The present unrest among teachers in regard to salaries does not arise from any suspicion that their employers are amassing undue profits from their services. It is due solely to the impossibility of making ends meet under war conditions on salaries based largely on peace conditions, and even then inadequate. There is also a widespread feeling that the teacher plays too small a part in the direction and control of education. Conditions are imposed from without, and he does his work under the eyes of a "cloud of witnesses," inspectors, local authorities, officials of every kind, many of them laymen or amateurs, or at best long removed from the actual work of the classroom. Under these circumstances it is natural enough that the teachers should seek some share in managing education. It is no less natural that the official or average local authority should find the demand inconvenient, but this is not to say that a National Council for Education is undesirable. Many things desirable in themselves are not desired by those to whom they may be somewhat troublesome. It is necessary to consider seriously the possibility of setting up a real National Council of Education.

### "Educational Watertight Compartments."

In a letter to the "Times," Dr. H. B. Gray, formerly of Bradfield, urges that our great boarding schools must be brought into the system of National Education. He says that they send out "a splendid breed of young men" who have, however, little knowledge of social ranks outside their own. He says that down to the middle of last century the country grammar schools educated "cheek by jowl" the sons of the county magnate, the professional man, and the small tradesman, and that this association in youth tended to obliterate class distinctions. With improved means of transit it is as easy for the son of a prosperous Northumbrian to travel to Eton as it was for his great grandfather to attend a Northumbrian grammar school. Hence our great schools tend to be the exclusive training places for social and political leaders and captains of industry, while the private preparatory schools are also places giving a training which tends to emphasise class distinctions. Dr. Gray adds that the voice of Labour is beginning to be heard, insisting that the sons of the people have a right to share in the same educational opportunities in the same centres of learning as are available for the children of the rich and noble. They maintain that there must no longer be any educational watertight compartments.

### The Single School.

Dr. Gray says that his object is to seek rather than to provide an answer to the question as to how the non-local public boarding schools, with their ancillary institutions, the private preparatory schools, are to be brought into the system of national education. Everything depends upon what he understands by the phrase "system of national education." It is not unlikely that some of the more short-sighted labour leaders will urge that there should be one type of school, and one only, for all classes in the community. This was urged by German labour leaders before the war, in the belief that a common schooling would tend to wipe out all class distinctions. In practice it will be found that these distinctions are not to be removed in this easy fashion. They arise from differences in home surroundings, and they will remain until we have the "equalitarian state" of which some people dream. In theory, the common school flourishes in America, and serves to maintain the pure gospel of democratic equality. In practice, the wealthy American sends his sons and daughters to private schools. It is difficult to see how we can prevent a rich man from giving a special education to his children any more than we can prevent him from eating strawberries out of season or from providing himself with special means of transit in the form of motor-cars or even aeroplanes.

It may be that great disparity of income will be less common than hitherto, and that there will be nobody rich enough to afford a special education for his children. Until that time comes we shall have private schools and the kind of class separation which Dr. Gray deplors. It may be suggested, however, that such distinctions are removed at the university or college stage more easily than in school. The social reformer should concentrate on the democratisation of higher studies and make real education accessible to everybody. Institutions which depend solely on class prejudice will then have to prove their worth or succumb.

**The Perils of Uniformity.**

Our social reformers tend to display the restrained ambition of a perfect parlourmaid, whose spirit is oppressed by an untidy appearance in things and quite unmoved by any intrinsic defect in the things themselves. Your perfect parlourmaid will show the same care and desire for symmetry of arrangement whether she is dealing with tawdry rubbish or real works of art. Her job is to make things look neat and to have a place for everything with everything in its place. In similar fashion a hireling gardener will sacrifice the health and natural well-being of plants to his desire for formality. The reformer with a passion for social "carpet-bedding" is always with us, and unfortunately he generally finds supporters in official quarters where uniformity is found to make easier routine administration. A uniform type of school for everybody would offer possibilities in the way of smooth working, but in every other respect it would be destructive of the true spirit of education. Nor would it greatly help in the fusion of social classes. It is somewhat surprising to find Dr. Gray urging that in the first half of the 19th century there was a better understanding between upper and lower classes than exists to-day. He should spend a few hours in reading the works of Mr. and Mrs. J. L. Hammond on the Village Labourer and the Town Labourer. In 1815 and later many of the upper classes were seriously defending the practice of employing children under nine years of age as factory apprentices and a working day of sixteen hours on six days a week, with Sunday mornings spent in cleaning machinery.

**O UNRELENTING TIME!**

O unrelenting Time! with Judas kiss  
Is't not enough to delve the deep abyss?  
To hurl the hapless boulder from the mountain top?  
To parch the seas and bid the rushing rivers stop?  
Art thou not satisfied with this,  
O unrelenting Time! with Judas kiss?

O unrelenting Time! is all for thee?  
Is't not enough if thou uproot the tree?  
Or snatch away and cheat a king his earthly crown?  
Conceal his grave and fling his flimsy temples down?  
Is this thy ultimate decree?  
O unrelenting Time! is all for thee?

O unrelenting Time! omnipotent,  
Is't not enough to stride the firmament?  
To leave thy tireless footprints on the ocean bed?  
And dim through magnitudes unknown the stars  
o'erhead?  
Say! wilt thou never be content,  
O unrelenting Time! omnipotent?

O unrelenting Time! stay thy swift race;  
Is't not enough to stamp thy seal on space?  
That thou must cast the graving glaciers from thy  
care?  
And turn aside to run thy fingers through my hair?  
And set thy mark upon my face?  
O unrelenting Time! for once retrace.

FRED RICHARDS.

**THE PLAY WAY IN LANCASHIRE.**

BY B. A. WILMOTT.

**III.—SELF-GOVERNMENT.**

ALTHOUGH Littlefolk can, of course, not start governing themselves all at once, the preparation they need is surprisingly small. But first they must learn to express themselves fluently, and, be it noted, oral fluency is no small aid to written fluency.

One Monday afternoon, when Prose and Verse had both been firmly established, and when we felt all too lazy for written work, the thought of Speeches came to me, and on my asking who knew anything about aeroplanes, submarines, football, hockey, cats, dogs, anything, all woke up and yelled "I do," and one had but to choose the more self-confident first to hold forth for, say, three minutes, and insist upon a fresh subject each time, to obtain nine or ten five-minute "interesting and instructive" lectures. Those left over, as well as the others, were told to prepare a speech "that would interest everybody" for the following Monday afternoon, which hour every week is now devoted to oral work. Birdnesting, the Ship Canal, Origins of the War, Country Girl's Visit to Town, Electricity, Cotton, Scouting, Fossils, the Giant's Causeway, the most diverse of subjects were attempted and treated sometimes lightly but broadly, sometimes narrowly but thoroughly. I started marking in the Perse method—4 for invention, 4 for expression (fluency and grammar), and 2 for delivery (including h's)—explaining how I marked, and after a fortnight allowing them to estimate the marks themselves. The best speaker of one week was in the chair the next week, and it was this person's business to suggest the marks (such as 2+3+1) and obtain support by a show of hands. This worked well until a duffer arrived there, when it was thought fit to elect a permanent Mistress of the Ceremonies, our first official, who also kept a written record of all speeches, and saw to it that no one slacked or palmed off a stale subject on us.

Now that everyone could speak (and therefore write) with grace and fluency, a short talk on what the real Cabinet and Parliament do to-day explained all they needed to know to set up self-government, and the Little-dame they chose to be Prime Monitor was told to form a Cabinet of the following officials: herself; the Lady of the Decoration (Flower Monitor); Secretary to the Weather Office (who sees to ventilation, scavenging, temperature chart, etc.); Secretary to the Records Office (who keeps the library, register, record of speeches, black marks, etc.); the Lord Mentor (Homework Monitor and "teller"); and, as they insisted, the M.C.

as well. These six relieved me of all menial work, and whenever neglectful, were subjected to a vote of censure or ejected by the Prime Monitor, who was so thorough as to maintain quite a Walpole regime for weeks. Boy and girl work smoothly together; each office gets filled by whichever is most suited to it.

Cabinet changes were not infrequent, the Lady of the Decoration resigning on being censured for neglect of a bulb that died, as also the Secretary to the Weather Office for leaving a thermometer out all night; and at the end of the term an alleged piece of favouritism led to a vote of non-confidence and the fall of the Cabinet. These are not small things; they teach responsibility, efficiency, co-operation, self-respect. Thus each new Cabinet is kept up to scratch by strong opposition.

Only once has trouble arisen. For bad work in another subject I threatened to keep the whole form in after school, unaware of an inter-form cricket fixture, and had to keep my word. The boys struck, and for a week refused to join in Joan of Arc, a history play we were doing. Stern treatment and stopping all Play methods made things worse, but on my deciding for open discussion with freedom of speech, immediately Touchwood the Court Jester offered me an apology (*real* apology, not cringe), the Bishop of Castleton stated their case, and it was all over.

In reading Perse Playbook No. 4, I came across Sir Gareth and Sir Pellinore, and when I made the suggestion of knightships and ladyships, they responded eagerly. Warned not to make the honour cheap, they at first merely created the ladylike M.C. Lady Edwina of the Lake, and have shown admirable tact in choosing only those who have distinguished themselves in some way; the next two to be honoured were Sir George of the Red Cross for prowess on the football field and honourable character, and the Lady Rowena for excellence in all branches of English. With such to set example, it can well be imagined that the tone of behaviour rose.

For shields the article on Heraldry in "Harmsworth" was quite sufficient, and, out of school hours, the knights and ladies chose and blazoned "simple and effective" cardboard shields—such as, Gules a chevron or with three castles of the same—to adorn our walls withal.

Occasionally someone asks permission, rarely granted, to give a formal lecture with illustrations on such a subject as The Sights of London, or Indian Life, and is formally introduced, speaks for twenty minutes, and is thanked, etc. Favourite authors and also battles make good subjects.

Discipline is maintained throughout by good feeling and interest, but when there is any disorder the offender is crimed by them, and publicly put on trial the following Monday. M.C. becomes "Your Worship," Mentor the Usher; there are counsel for the prosecution and defence, and witnesses, while the rest are jury. Sentence consists of fines (towards Flower Money) not exceeding threepence; the alternative of so many days in Coventry is not likely to be used. On no account is a child ever charged thus with anything really disgraceful, as that might lead to tears, estrangement, possibly parents' notes and that sort of thing; straightforward punishing is best there, though temperament must never be forgotten.

As all this has to be fitted into one hour per week, except it be after school hours, a regular order of procedure has developed. Let us describe a typical Monday afternoon.

Lord Mentor has turned the front desk round for the M.C., who now rises to ask if there is any Cabinet business. The Lady of the Decoration calls for subscriptions due, and the Editor of the Magazine (The Zephyr, "bringer of flowers") for contributions in prose and verse. Next Opposition business: one member complains of a dirty floor; another accuses the new Monitor for Agriculture (gardening) of slackness in collecting "seed money," and moves a vote of censure, which is opposed and fails. Lord Mentor announces a serious charge against the Lady Una of not staying in after school with the others—a fact I had not noticed—and her trial is fixed for next week. The Prime Monitor now proposes to raise to the dignity of ladyship one distinguished for her poems, and the Opposition leader seconds with a eulogium; carried, and the new Lady is told to choose her a title and escutcheon by next Monday. So to lectures; first the names of those behindhand are read out, and one of these describes the Roman Arena. At the end "comments" are asked: someone denies that men fought with beasts, they fought with each other; this is explained. Someone else accuses the speaker of saying "A great many was present," another says he said "'elmet." Marks 4+2+1? Yes. Next the Girls' Cricket Captain gives "The Cuckoo," and says she makes no nest but "drops the egg on the ground." whereon Touchwood remarks "Would be a cuckoo!" Then A Voyage to Australia, Beekeeping, Winter in Canada, A Greengrocer's Life (with a fine description of the Fruit Market), Sugar, Fossils, The Giant's Causeway, and My Two Pet Rabbits, which was so quaint I had it written down:

" Rabbits are very amusing pets. . . . I keep two myself and they are called Jack and Jill. I feed them three times a day with green stuffs and tea leaves, and they never leave anything over. . . . Sometimes I let them out for a run, to exercise them and to make me laugh. For when one runs the other runs, when one jumps the other jumps, and when one stops the other bumps into him and both go head over heels. Then they get up and do it again."

The warning bell goes and someone rises to ask if the home work can be ballads to-night, as they have been overlooked of late ; this is agreed to, the final bell goes, and out they troop.

And what am I ? A constitutional monarch, but one who never interferes except to be obeyed. It will be seen that self-government does not here extend, as at the Perse, to choice of work ; this it should do had I not to direct their energies, in order to cram all these activities into a couple of terms. It is executive and judicial self-government, except that homework and textbooks are as far as possible selected by them. Of the threefold Play Way, verse brings out the artistic side in a child, prose the humane and imaginative, self-government that self-confidence and responsibility that together mean success.

Now as to the effect a mixed class has upon it all. These articles do not profess to deal with " The Play Way in Co-education " for this reason, that I find it is not sex, but temperament and taste that both in prose and in verse influence the trend of the individual's written work and collectively that of the class, for, apart from its important influence upon temperament and taste, inwardly sex has very little to do with Littlefolk at all. Just as you and your wife both read Dickens or Thackeray in much the same way, so Littleman and Littledame will both sit and write a ballad ; but the tomboy tells of dragons and of wars, the shy child tells of wooings and " of wanderings far by sun and star," the thoughtful of memories and hopes ; though as often as not they delight in things alien and the very opposite to their real nature, as Shakespeare, Virgil, blind Homer, and all great men have ever done.

In oral work the difference is more noticeable. Girls in general tend to be less broad-minded in their treatment of a subject than boys, and wander from the subject, but they are more thorough and explicit ; though indeed time cures both. Boys score for invention, girls for expression. Temperament decides what line of subject they choose, and gradually each finds a level ; for though bold enough to write on any subject, they naturally

prefer to speak on familiar subjects. The boys are churlish at first, but " That is rude ! " soon quells them, and the girls crime the boys for roughness while the boys crime the girls for anything underhand ; and both weaknesses are disappearing.

Naturally some shine and some are weak in these subjects as in all others, but it is no whit an exaggeration to say that, of my last term's form of one and twenty, two only failed to produce a worthy poem (and they were the first two to put work into our Album of Prose), that none whatever are really poor at fictitious prose, and that one girl only is unable to speak fluently, who has weak nerves. A child who never yet averaged half-marks in any one subject, decorated our room charmingly and produced Summery Day :

" I am the lily in coat so gay.  
I like to go with the daisies to play.  
I live down by the trickling brook.  
Rude children came, my buds they took,  
Before they left me my bell they shook,  
When I was sleeping that summery day."

Do teachers read this and say : " What energy all this requires." On the contrary it is delightful to come in and find all your work being done for you ; in prose and verse, criticism of book-matter, of each other's work and even suggestion of homework ; in oral work, a never-ceasing flow of general knowledge and culture. When an experiment occurs to you, you try it the very next time ; if it fails, you think why ; if it succeeds, then there you are. Thus has arisen, at successive strokes of a wand, my kingdom of a day.

But what has all this to do with Lancashire ? All this might happen anywhere. But that is just it ! If even the blind materialism of the North be overcome by the Play Way—for indeed its chief hindrance has been reaction against seriousness, a tendency to be aesthetic, with an overplus of such things as nature poems on the heavens, the seasons, the flowers—but if victorious in Mammon's very capital, then surely the Play Way must succeed anywhere.

### Higher Education for Working Girls.

Miss Phoebe Walters, of the Y.W.C.A., thinks that many working girls need education rather than mere vocational training, and desires funds to enable young women without means to become students of a residential college which will be established either in London or Cambridge, to facilitate the higher education of working girls. At first not more than twenty students will be accommodated.

## THE HEADMASTER.

By "J. W. W."

"THE right hon. gentleman concluded by saying that it was impossible to overestimate the value to the nation of the work done by the headmasters of such schools. They sowed the seeds of knowledge, quickened the intellectual life, and stirred the moral and spiritual impulses of those who were to be the future citizens of the greatest empire the world had ever known. When he thought of the many petty details and squalid squabbles which occupied too much of the time of a Cabinet Minister he could scarcely forbear to envy the headmaster whose mind and energies were claimed by the lofty and inspiring tasks that were the schoolmaster's daily work."

The headmaster laid down the newspaper and smiled. The words he had just read formed the peroration of the speech delivered by a Cabinet Minister at the prize distribution of a public school. The insistent bell rang, and the headmaster, getting into his gown, seized his mortar board and passed into the school hall to preside at the morning assembly. Prayers over and the boys dismissed to their classes, the "Chief" went to his study to begin his day's "lofty and inspiring tasks."

There was a knock at the door, and, in response to the headmaster's stentorian "Come in," two boys entered, each with a note in his hand. The "Head" read the first:

"Dear Sir,

"Will you please excuse Timothy's homework last night, but he had a bad attack of geographical gastritis, chemical cholera, historical hysteria, and mathematical mumps, which lasted until bedtime, when he suddenly got quite well, but it was then too late to do his home work. The doctor says he is not strong, and I should be glad if he were not pressed to do much work in school.

"Yours sincerely, DOROTHY BINKS."

The headmaster eyed the convalescent Binks with a look that was one half amusement and the other half contempt, and said:

"O, so you had all those horrible diseases, had you?"

"Yes, sir," responded Binks; "awful bad, sir."

"Do use adverbs."

"Awfully bad, sir."

"Dear me, how sad!" said the headmaster. "Well, if you have a fresh attack to-night we'll try what tincture of stick will do for you to-morrow. Understand?"

"Perfectly, sir," said Binks; "I'm sure I see the point."

"Good! you'd better go before you feel it."

Binks went, glad of the compromise, and the headmaster held out his hand for the note from the other boy. It ran thus:

"Dear Sir,

"I regret to say that my son was absent yesterday owing to a severe cold. Will you kindly see that he keeps his chest protector right in the middle of his chest. He wriggles about so much that it works right round his ribs and that is how he catches cold. Will you also please excuse him from drill to-day as he has a chilblain on his thumb nail?"

"Apologising for troubling you.

"Yours very truly, MARIA FLABBIBUS."

The headmaster looked up.

"All right, Flabbibus; I'll see to this. Here, take this whistle. Whenever you feel your chest protector working round your ribs, blow this, and I'll come running to put it straight. I've nothing else to do."

"Thank you, sir. Need I drill, please, sir?"

"Good gracious, no! The chilblain might spread as far as the first joint of your thumb."

"Thank you, sir! Please, sir, mother said I was to ask you if I might sit in your study this morning—there's such a draught in the class rooms."

"No, no! go to the drawing-room and lie on the sofa there. I'll send the masters in to you to give you your lessons. You'll find some cake and ginger beer on the whatnot, and I'll send a prefect to you with all the illustrated papers."

"Thank you, sir! Mother said she was sure you would see I didn't catch cold."

"Your mother was quite right," said the head; "but you'd better go now, before you catch something else."

Flabbibus took the hint and went without enquiring what the "something else" might be. The headmaster turned to his desk and opened a formidable envelope bearing outside the legend "O.H.M.S., Board of Education."

He read it, perplexity darkening his brow as he read. This is what he read:

FORM XYZ 1234567.

(To be quoted in all communications.)

Headmasters are required to furnish the Board with the following information:—

### Particulars of Boys.

No. of boys with red hair.	.
" " " black hair.	.
" " " fair hair.	.
" " " blue eyes.	.
" " " brown eyes.	.
" " " black eyes (natural).	.
" " " black eyes (the handiwork of some other boy).	.
" " who can be led but not driven.	.
" " who can believe all the master's stories.	.

### Particulars of Parents.

No. of mothers who think their boys are not strong	.
" fathers " " " " lazy.	.
" parents who prefer book-keeping to Latin.	.
" " who cheerfully pay the "extras."	.

### Particulars of Masters.

No. of masters married.	.
" " engaged.	.
" " with faint hopes.	.
" " who have given up all hope.	.
" " who are "hopeless" in another sense.	.

But why go on? For those who know Board of Education Forms further illustration is unnecessary; for those who do not—"where ignorance is bliss 'tis folly to be wise." The headmaster wrestled valiantly for some time, finding, or trying to find, answers not disgracefully inaccurate. A violent knock at the door disturbed this intellectual exercise, and a prefect burst in, breathless.

"O, please, sir! Blobs major was carrying a rifle round the corner of the Hall, and ran into Jones minor and knocked his eye out."

The head turned, even as the proverbial worm.  
"Well, tell Blobs major to put it in again."

"Please, sir, we can't find it."

The Head turned to a small drawer, in which was an assortment of glass eyes of all colours and sizes, and, taking one, said, as he handed it to the prefect:

"Here, put this in, and tell Jones minor to be careful not to squint with it. Remember, I'll have no squinting in class."

The prefect was about to go when a whistle sounded. The headmaster started for the door, then checked himself, and took a hammer and a nail from a box on the table.

"Here," he said to the prefect, "find Flabbibus minor and nail his chest protector to his chest with that."

Exit the prefect on the most engaging job he had ever known!

But those Board of Education forms were not filled in that morning. An assistant master sought an interview to beg the day off to enable him to visit the next town to see the sister of his fiancée, who was passing through on her way to London. A governor of the school called to let the headmaster know that if Mr. Smug, a fellow governor and bacon curer, were asked to second the vote of thanks to Lord Furlong for distributing the prizes at the Speech Day next week, he, the aforesaid first governor, would be a thorn in the flesh of the headmaster from that same Speech Day to the Day of Judgment.

An irate father called to demand the instant dismissal at the hands of the headmaster of an injudicious assistant master who had ventured to tell the irate father's boy, in class, that he had the intelligence of a post. The cleaner and caretaker also looked in, as he did daily, to prefer a claim for increased wages and less work, and finally, a father, who took his parental responsibilities seriously, called upon the headmaster and spent a full hour in asking him what he thought of the intellect of his (the serious parent's) boy.

The headmaster's wife looked in, as the lunch was getting cold.

"Aren't you coming to lunch, dear? Why, George, whatever is the matter? You look worn out. What have you been doing?"

The headmaster gave her a ghastly smile. "O, I've only been engaged in the lofty and inspiring tasks that are the schoolmaster's daily work."

#### A Threatened Strike.

When a Decimal Association lecturer had completed his address on our muddled weights and measures to the boys of a well-known West Country school recently, some of the more active members of the school community got their heads together and hatched a plot to strike against the teaching of our antiquated tables. "We will only learn the metric tables," they said, "they are all 'ten times ten,' and we can learn them in a few days." One cannot help feeling sympathy with the would-be strikers, though they had probably in view extra holidays, and not the increased training in a foreign language or mathematics which the adoption of the Decimal Association's suggestions would make possible. Most teachers put the saving at a year of school arithmetic life, and many place it as high as two years.

## CAN THESE BONES LIVE?

BY DAVID SOMERVELL.

### VI.—Conclusion.

If by chance any reader has perused the five preceding articles of this series, he will certainly have forgotten them, and I shall serve both him and the other sort of reader if I briefly recapitulate and try to subsume their scattered suggestions under a general idea, an educational policy.

I have written throughout from my own standpoint, that of a teacher of the favoured youth that enjoys education in a public school between the ages of sixteen and eighteen. That type I may claim to know fairly well, from the dunce down to the potential Balliol scholar, from the son of the country parson down to the son of the "profiteer," as we amiably describe the successful business man in these days.

The first two articles dealt with History, and suggested that by one method or another it was all-important to create a sense of the continuity of past and present history: to show that Macaulay's Essay and yesterday's *Spectator* really belong to the same bookshelf: and with this end in view to direct especial attention to the study of the history of the most recent past. So long as "the most recent past" means the Great War, this counsel is likely to be followed in the letter more frequently than was the case in, say, 1913, when teachers and text books succumbed to an impulse to find a suitable *finale* in the Indian Mutiny, the Reform Bill of 1832, or the Battle of Waterloo, and relegated ensuing etceteras to a concluding summary of "outlines," forbidding and unexplained. But there is only too much likelihood that the War will be treated in a romantic, backward-looking, and antiquarian spirit, concluding in the novelist's "Finis" and a suggestion that even if they did not all live happy ever afterwards, history is no further concerned with them.

The third article was a digression inspired by "Joan and Peter." Its suggestion was "How little they know of teaching who only school books know." A school is bound to be somewhat of a monastery—even if combined with a nunnery—but the teacher must struggle for dear life to keep alive and in touch with the contemporary world, otherwise he will have no idea what it is that he is sending his pupils out into. And he cannot keep in touch with the world simply through the medium of the neighbouring golf club.

The fourth dealt with English Literature, and suggested that it was not enough to introduce the pupils to the classic masterpieces of the past;—not enough, even though the introduction were skilfully and sympathetically made, and laid the foundations of a life-long friendship. It is necessary to cultivate the genuine reader's eager and discriminating eye of the valuable and permanent elements in contemporary literature. Otherwise we produce and deserve to produce the ludicrous type that honours calf-bound "classics" on the shelf, "for Sundays" as it were, and for real reading battens on Florence Barclays and Ethel Dells of the circulating libraries.

The fifth article suggested newspapers as a proper and indeed essential subject of study at school—*proper* because much can be learnt from them, and, unlike the school-book, they have all the variety of Cleopatra, and *essential* because they are the spiritual edged tools

of democracy, and unless we are taught to handle them—history seems to show that most cannot be trusted to learn this by instinct or experience—we shall cut our own fingers, maybe our own throats.

The headline "Can these bones live?" was chosen guilelessly to attract attention, but it conveys quite as much meaning as most advertisements. It suggests that school curricula, like school teachers, are subject to a process of desiccation in the stale air of the class room, and that in this state they cease to nourish and become a mere burden to the flesh, nourishment being sought and obtained elsewhere, on the playing fields, in the street, and not very adequate in either. This is most obviously true of the so-called "English" subjects. England is alive, and in her life we live and move and have our being. If we understand nothing of the anatomy the physiology, of that greater life which conditions our own, we cannot direct our own lives with intelligence.

The word "politics," which once stood for one of the highest concepts of the Greeks, has been rolled in the mud, and now suggests only rabid partisanship and clever selfishness, or, in another aspect, stately stupidity. But all the shortcomings of our politics can be traced to the lack of political education among the people.

Why is an election a farce, and worse? Because there has been no political education.

Why is it that the nightmare dreamed by Carlyle and Disraeli and H. G. Wells seems nearly coming true, the nightmare of an England destroyed by the warfare of its "two nations"—Rich and Poor? Because neither rich nor poor have been taught the economic elements which lie at the root of politics: in default they have uncritically taught themselves the economics of the profiteer, which leads to ruin. Here, as everywhere, the schools of the rich are far more to blame than the schools of the poor, because they have had such splendid opportunities.

There are dangers and difficulties about this plan of opening the windows of the classroom to the bracing air blowing outside. There is the question how wide the windows should be opened. Other things may blow in along with the fresh air.

But the experiment *must* be made, and if I have convinced the reader of that I must send him for the study and consequent avoidance of the dangers to the record of my own experience. A colleague and I in the cloistral atmosphere of an old Tudor foundation made a rather radical two years experiment in political education, which only terminated, in temporary collapse, two years ago. In the heyday of our optimism we—that is, Victor Gollancz and myself—wrote "Political Education in a Public School" (Collins); six months later, sadder and wiser men, we wrote, in the intervals of war work, "The School and the World" (Chapman and Hall), which an acidulated reviewer stigmatised as "the story of a failure." *How true!*

### A Portable Cinema.

Mr. George Palmer, of 47, Gerrard Street, London, W. 1, has placed on the market a compact and ingenious form of cinema projector, which may be worked in any room where electric light is available. By means of a plug fitting into an ordinary lamp socket the current is conveyed to the projector and provides adequate illumination for the films, which are of standard size. The whole apparatus takes up little more space than a small suit-case, and it is admirably adapted for school use.

## CHRONICLE OF EDUCATION.

- July 21.—Issue of Regulations by the Board of Education for the training of future health visitors under the Ministry of Health.
- July 23—George Eliot Centenary celebrations in Nuneaton. Address by Dr. Russell Wakefield, Bishop of Birmingham. The celebrations included a children's festival and a century costume ball. The proceeds for the four days will be devoted to the erection of a permanent national memorial to George Eliot at Nuneaton.
- July 24—Address by Mr. H. A. L. Fisher at the Blackpool Secondary School on "The Educational Ladder." Mr. Fisher said that if the provisions of last year's Education Act were carried out to the full it would give us an education system that would be the wonder and admiration of the whole world.
- July 25—Opening of fourth conference of New Ideals in Education at Cambridge. At successive meetings during the week the chair was occupied by Mr. Bertram Hawker, Lord Haldane, Sir Charles Walston, Dr. Rootham, Mr. Edmond Holmes, Mrs. Lamartine Yates, Professor Prior, and Mr. Frank Benson.
- July 25—Conference, called by the Minister of Education, of representatives of the County Councils' Association, the Association of Municipal Corporations, the Association of Education Committees, and the National Union of Teachers met at the Board of Education to consider the question of teachers' salaries.
- July 26—Annual general meeting of the Incorporated Staff-Sight-Singing College at the Royal College of Music. Addresses by Mr. Stewart Macpherson, F.R.A.M., on "The place of Music in the school curriculum."
- July 30—Address of congratulation presented to the King by the L.C.C. on the conclusion of peace. In a notable reply His Majesty said: "I am convinced also that nothing is more essential to national prosperity and happiness than education."
- Aug. 11—Death of Mr. Andrew Carnegie at Lenox (Mass.).
- Aug. 12—The Joint Standing Committee on Teachers' Salaries agreed to the principle of the adoption of a National Minimum Scale.

### Some Appointments.

- Dr. A. Elliot, M.A., M.D. (Edin.) to be Secretary of St. Thomas's Hospital Medical School.
- Mr. D. R. Maclean, M.A., D.Sc., as Professor of Botany of the University of Cardiff.
- Mr. T. H. Pear as Professor of Psychology in the University of Manchester.
- Mr. W. Mansergh Varley, D.Sc., M.A., Ph.D., of Swansea, as Principal of Brighton Technical College.
- Lieutenant-Colonel Sir Theodore Morison, K.C.I.E., K.C.S.I., as Principal of Armstrong College, Newcastle.
- The Rev. Richard Brook, M.A., Fellow of Merton College, Oxford, as Principal of Liverpool College.
- Miss Meade, Secretary of the Appointments Board of the University of Manchester, as Head Mistress of the Bolton Secondary School.
- Miss Jessie Sprunt, second mistress of the Manchester High School, as Headmistress of the Orme School for Girls' Newcastle, Staffordshire.
- Mr. G. H. Leslie, B.Sc., Headmaster of the Bath Higher Elementary School, as Headmaster of the new Day Technical School at Liverpool.
- Miss K. M. Buck as Organising Secretary of the Association of Teachers of Domestic Subjects.
- Mr. A. C. Badcoe, B.Sc., Assistant Secretary to the Norfolk Education Committee, as Secretary to the Exeter Education Committee.

## SUBJECTS AND METHODS.

### Woodbrooke Summer School of History.

I imagine that an inspector of the Someshire County Council, commissioned to report on the third Summer Course at Woodbrooke, and appearing there on the Monday evening in August which terminated the course, would have been somewhat startled. He would naturally expect to find a tired and perhaps somewhat depressed set of people, weary from a course of study which included two lectures a day followed by discussions, as well as meetings to discuss Modern Tendencies in Education and the Historical Teaching of the Future. He would in fact have seen a merry throng of laughing spectators wildly applauding a group of actors gaily imitating in word and gesture distinguished lecturers. "Can I really recommend my Council to pay grants for this sort of thing?" he would probably ponder. (Not that Woodbrooke gets grants, however.)

And he would possibly have been even more shocked had he come a little earlier and seen what we called a Lightning Masque, composed in a few hours and representing the History of Woodbrooke in early Saxon and Norman times. Here was a bishop whose mitre head-dress was an old biscuit box, here were Norman Knights whose helmets were waste paper baskets, and here was William Fitzansulf, the Knight to whom fell the land around Woodbrooke, with a coalscuttle for a helmet, a boiler-cover for a shield, and a shovel for a battle-axe. He might have been more pleased to hear a genuine Old Worcestershire ballad, "The Jovial Hunter of Bromsgrove," given with much gay dancing and gesture, though I wonder whether he would have been annoyed to find that the pretty tune, "a real old folk song surely," was just an infant of some 27 hours, having been composed on the previous evening by a London Headmistress and an Australian pedagogue.

If indeed our Inspector had turned up on the preceding evening he might have been even more shocked, seeing conspirators appear from behind various bushes with their fingers to their lips commanding silence, and then vowing death to all superior persons. Here again were the members of the course sitting on the sloping lawn and enjoying the efforts of the labour group to caricature lecturers and various more or less prominent students.

To give some account of the course let me begin with the first meeting on Saturday, August 2nd, when Mr. Marvin, in the course of his introductory lecture, said:

"It was five years ago almost to the very day that I was speaking at a Friends' Settlement at Jordans. War had burst upon us, and thinking of the war which had come to divide the nations, I spoke of the necessity of studying the things which bring men together. 'Won't you arrange a course of lectures to deal with such things?' said one of the audience, and when I came to plan it out it seemed to me that I could find no body of people more sympathetic to these ideas than the Society of Friends. And so it came to pass that in this quiet place of Woodbrooke, with its feeling of fellowship and its atmosphere of religion, we met in August, 1915, to study the Unity of Western Civilisation, and as you know the lectures have been published. 'You have dealt with Unity,' said one of my hearers, 'surely the next step is Progress.' And so next year we had a course, and published 'Progress and History.' Then insurmountable obstacles stopped us, but this year we are met, some 160 of us—the number might have been trebled if we could have taken all who wished to come—to study 'Recent Developments in European Thought.'"

As at previous courses Mr. Marvin had gathered together a distinguished group of lecturers. History, Literature, and Philosophy, these of course were the chief subjects, Art was not neglected, Science for the first time found a place; but I think the triumph of the year's course was the capture of Dr. Walker, of Balliol, who was not only a musician, but a historian and a philosopher. The two evenings when Dr. Walker charmed us with Beethoven, Mozart, and

Schubert, as well as Scriabin and modern composers whose very names were unknown to us, will linger longer in our memories than even the lecture when he revealed himself as a very human person looking to folk music to save the country from musical degradation, and when he showed that a sense of humour is not killed by erudition. Dr. Walker made us all want to "go to the great musicians at once." Perhaps I had better take Professor Bragg's lecture on "Atomic theories" next, as the science was our other novelty. We had looked forward to a fearsome time, but those of us who had listened to the Professor in the smoking room making the science of sound clear to a plain man of business had hopes of him. We found him full of apt and amusing illustrations. Oh that I had had such a teacher of science when I "did" science, and who will say that science lectures of this type would not be more valuable than many days of test-tubing.

The discussions, which took place after an interval spent in pacing the lawn and getting one's bullets ready, were all the more valuable in that we had lecturers staying on for a few days and lending a hand in the heckling. Our labour group was useful and competent as in past years, and I fancied they seemed a little mellowed. Neither was it a disadvantage to have Mr. Marvin as chairman lending a sort of unity to the series. Unity, of course, is our sacramental word at these courses.

If I had to choose amongst the lectures on history, philosophy, and literature, I should place Professor Herford's first. We listened enthralled to a crowded hour of glorious interpretation. "Here is God's plenty," we felt, and rapidly we noted down names and titles to guide us for reading for many a delightful hour. The lecture, fortunately, was followed by no discussion. We only wanted to applaud and reflect, but a short speech by Mr. Clutton Brock with some charming extracts from Chinese poetry we should have been sorry to miss.

"This is the only popular school of philosophy in the country," said some one in discussing the Woodbrooke Course. I will not say that we all understood Professor Taylor's lecture on Philosophy. It lasted nearly two hours. We felt that Bernard Russell was having a rough time, and we were impressed by references to Italian philosophers. We dared not move, for we felt that the Professor was a master, and we delighted in his humour, but I am not surprised that when the labour group set out to caricature the lecturers they gave Taylor just as rough a time as he had given Russell. Professor Lindsay was a little kinder to us in Political Philosophy, but we felt, some of us, that these high matters were not for the likes of us. It was well that C. R. Fay, of Cambridge, then appeared on the scene to talk in two lectures of the Industrial Conflicts of the 19th century and the Terms of Peace. I understand Mr. Fay is a bit of an authority on machine gunnery, but no one who saw his free and easy gestures would connect him with either the army or the Dons at Cambridge. I regret to say I missed his first lecture, but I would not have missed the second even for a bathe in the Woodbrooke pool. Anything I could say would sound extravagant. I can only quote a young lady—"Mr. Fay was really magnificently topping."

The course is over. We look back on ten days spent in delightful company, drawn from all classes. We lived together, chatted at meals, walked and talked before and after meals. We played tennis, went to a gorgeous garden party at the house of that grand old octogenarian, George Cadbury. We saw a model village, we witnessed a new play, we sang, we danced. Our heads may be crammed full of new furniture which will want some arranging, but we are all quite sure that the Unity Course of Lectures, the Marvin Course of Lectures, whether they take place at Woodbrooke, at Wells, at Durham, or elsewhere, whether they deal with "East and West," as has been suggested, or some other topic, are now an absolute necessity to many who were present, and those who were absent will envy us if they hear us talk about them

T. R. DAWES.

## EDUCATION ABROAD.

### The Sadler Commission Report.

The Report of the Calcutta University Commission, presided over by Sir Michael Sadler, was issued on August 9th. In a message to The Manchester Guardian Reuter's correspondent says: "It is not a mere academic document, but a careful and searching analysis and criticism not only of the University system and the schools upon which it rests, but of the social and historical conditions which have given rise to them, followed by a carefully wrought out scheme of reconstruction."

The main features are:—

1. The establishment of a wholly new system of administration for secondary and higher education, which is calculated to bring into effective co-operation the chief interests concerned, viz., the Government, the universities, the learned professions, commerce, industry, and the public.

2. The creation of a new type of institution, to be known as the Intermediate College, which will take over the work now covered by the first two years of the university course dealing with it by school and not by university methods of teaching, and providing not only preparation for the university but vocational training along various lines. This the Commissioners regard as the pivot of their whole scheme.

3. Far-reaching changes are proposed in the organisation of the teaching profession, both for school work and for university work, changes which may ultimately result in the gradual supersession of the service system of recruitment (save for special branches of work) by a professional organisation of teachers in Government and privately managed schools.

4. The Commission recommend a complete reorganisation of the existing resources for university teaching in the city of Calcutta on lines which will make possible the creation of a genuine teaching university, in which the university and the colleges will co-operate at all stages.

5. They propose a special organisation for the encouragement of women's education.

Finally they put forward a number of valuable and interesting proposals for the improvement of the condition of student life, and a systematic handling of the problem of finding more ample sites for educational work in Calcutta.

### Ramsay Memorial Fund in France.

The French branch of the Ramsay Memorial Fund, which is to commemorate the work of the late Sir William Ramsay, is asking for contributions to a fund of one million francs (£40,000) for the purpose of founding Ramsay Memorial Fellowships in chemical science, similar to those to be founded in this country, such French fellowships to be available for bringing to this country for purposes of research chemists trained in the universities and technical colleges of France. The cost of founding each fellowship will be £6,000. It is hoped by their means to enlist the influence of the universities of the two countries in promoting helpful international relations.

### Bombay University.

At a meeting of the Senate of Bombay University recently it was decided to appoint Professor Patrick Geddes as the first Professor of Sociology, subject to the approval of the Indian Government.

### A Protest and a Reply.

The Rector and Senate of the University of Leipsig have sent to the Universities in neutral states a letter of protest concerning the expulsion of German teachers from Strasbourg. Dr. Nicholas Murray Butler has addressed a reply to the Rector of the University of Upsala, in which he invites the Leipsig complainants to state what action they took to prevent the action of the German military authorities at Louvain.

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### London University—Degrees in Commerce.

Dr. S. Russell Wells recently described the plans prepared by a general committee, of which he is the chairman, for founding degrees in Commerce. He said the committee were in a position to have working by October 1 a scheme which had the approval of commercial experts, the Senate of the University, and the support of the Government.

It was proposed to institute the degrees of Bachelor of Commerce and Master of Commerce, which would correspond to the B.Sc. and M.A. Students would work at first under a common curriculum, then on particular subjects, and, after two years' training, they would spend two years in a merchant's office. There was no doubt for the future of the young men, because employers were eager to accept them and to pay £300 a year to them during their two years in the trade.

The estimated cost of the scheme would be half a million, of which they had already raised a considerable portion. The trustees of Sir Edward Cassel's Fund had offered £150,000 on condition that a similar amount would be subscribed by October. Of this sum they had already collected over £45,000.

### The Caldecott Community.

The Caldecott Community have recently issued their annual report, and they give a good account of their activities during the past year. Eighteen months ago they moved from London to the country, and during that time the number of their working-class boarders has risen to 42, so that the house is now full.

A workshop has been installed in an old apple-loft, while looms have been set up elsewhere, and carpentering and weaving lessons are greatly enjoyed by the children. A community farm has been started, and pigs, hens, rabbits, chickens, ducks, a cow and a sheep have been joyfully welcomed by the children. A chapel has been built up gradually in a disused coach-house, along lines suggested by the children.

The fees charged are very low, and therefore the community is largely dependent on voluntary assistance. The staff practically give their services, and one of the pleasantest features of the year's work is that in several cases parents, whose incomes have increased, have voluntarily increased their payments.

### An Evening University.

Writing in the "Yorkshire Observer," Mr. A. C. Coffin, Director of Education, foreshadows the time when the excellent continuation schools of Bradford will rise to the level of a university for the textile and allied trades. Already there are in Bradford the Technical College, the School of Art, the three branch technical schools, and the Commercial College.

### An Experiment.

The West Riding County Council has organised courses for three months at Alverley Hall, Doncaster, a residential school for teaching rural housewifery, including cooking, breadmaking, fruit-bottling, laundry work, poultry and pig keeping, needlework and general subjects for young women over 17.

### Borough Road College.

Dr. T. Hugh Miller, Vice-Principal of the College, has been appointed Principal, in succession to Mr. F. J. R. Hendy, now Director of Training in the University of Oxford. Dr. Miller has been a tutor in the College since 1889, having joined the staff when Mr. P. A. Barnett became Principal.

# SUPPLEMENT.

## THE BOARD OF EDUCATION AND COMMERCIAL TRAINING.

By FRED CHARLES, B.A.

THE "Memorandum on Commercial Instruction in Evening Schools"\* is the Board's first contribution to the literature of commercial education. It is a beginning only; it deals with instruction in evening schools for six hours a week. The University of London has issued provisional regulations relating to degrees in commerce, incomplete in important details indeed, but with suggestive courses for whole time students for two years. The Board's issue of these elements is belated, and it is very far from leading the way to a scheme of higher education for commercial life, but it is welcome as an instalment.

While the schemes and syllabuses suggested below are put forward as typical, it is intended that they should be modified in content as the vocational requirements, the abilities, and the general educational level of particular groups of students dictate. It is well maintained that the study of commerce is a study of one aspect of society; commercial science is a social science, and its study has the advantage of being at once scientific in method and humanistic in content.

Commercial courses should be designed to consolidate a knowledge of the fundamental arts of calculation, and of expression, whether in speech or writing, and to train students more thoroughly in the use of books and other instruments of knowledge; to give such practical knowledge and skill as can be acquired in a school and cannot be completely acquired, if at all, during the daily routine of commercial life; and to teach students to think effectively about commerce.

The curriculum is divided into three courses: junior, senior, and advanced. The junior, occupying two years, is intended for pupils of about 14 years of age from elementary schools. The senior, also occupying two years, or in some cases three, is intended for those who have completed a junior course, those who have remained at school until 16 years of age, and those older students who have received only an elementary education but whose practical experience has sufficiently advanced their educational fitness. The advanced course is for those who are fit to profit by the instruction.

"The essential subjects of a junior course are arithmetic and English. It is very desirable, however, that students who pass through a normal junior course extending over two sessions should have some knowledge of the principles upon which accounts are kept; geography taught from the economic standpoint is both illuminating and useful; and very many students will wish to study shorthand, a subject which, though having little educational relationship to the course as a whole, is undoubtedly of considerable practical utility. The cultivation of legible, neat handwriting, correct spelling, and accurate figuring will call for particular attention throughout the course."

Plans are then given of three courses differing in the relative importance of these subjects.

"The curriculum at the senior stage assumes a predominantly vocational character, with a general commercial training as its principal objective. This training is limited and conditioned by the fact that the students are employed in commercial work in the day time. The function of the evening school is, therefore, to supplement practical experience by a course of studies which will broaden the student's outlook, enable him to realise the nature of the work in which he is taking a small and specialised part, and train him in the power and habit of thought in relation to business.

In such a course of studies the dominant element must be the study of the conduct of the business unit viewed as a unification of the various activities which it embraces."

"The first essential subject of the senior curriculum is, therefore, business economics, usually described as the theory and practice of commerce, which, by the methods of description, analysis, and measurement, will impart a systematised knowledge of the structure and functions of commerce, of business organisation, and business transactions, and in imparting this knowledge will develop some power of scientific method as applied to the problems of business."

Arithmetic and accounting also are essential elements of a senior course, which will be completed by a subject selected by the student according to his special needs and aptitude. This selection will usually be from English, a modern foreign language, technology of an industry, the study of a commodity or a group of commodities, economic geography, economic history and shorthand. Deviations from such a normal course can be arranged to meet the needs of groups of students—for instance, of prospective shorthand typists.

Suggestions are offered for the organisation of courses related to trade, the commercial side of industry, transport, finance, and insurance. "Business management and methods of business" is the only subject common to the three typical courses in the retail and wholesale (warehouse) trades. It seems a doubtful policy to omit the principles of accounting from any course; the only safe reason for their omission is that all the students concerned have already a sound knowledge of this subject. Commodities, general economics, a modern foreign language, and commercial law appear in one or other of these three schemes.

Some eighteen other advanced courses are outlined; each has its special purpose, and most have "fixed" and "elective" subjects; for instance—

### Advanced Course in Fire Insurance:

First year.—Fixed subjects: Principles of fire insurance, building construction (including plan drawing), and common hazards relating to buildings, processes of manufacture (a selection) and their hazards. Elective subjects (one to be selected): Accounting, physics and chemistry, mathematics, a modern foreign language.

Second year.—Fixed subjects: Law and principles of fire insurance; processes of manufacture (a selection) and their hazards; and practical methods for the diminution of fire risks. Elective subjects (one to be selected): Fire insurance accounts, physics and chemistry, mathematics, a modern foreign language, foreign fire insurance.

After the curricula of the various courses come the scheme of work. "English is perhaps the most important, and certainly the most difficult subject of the junior commercial course." "Perhaps" seems unnecessary. "From the vocational point of view the object of the English lessons should be so to develop the students' command over the mother tongue as to enable them to express themselves, whether in writing or speech, accurately, concisely, and effectively."

Practice is the only method by which power over the mother tongue can be acquired. Those have the best command of English who from birth have lived in an

\* Circular 1116. Price 9d. net.

environment where accurate language, a copious vocabulary, a pure pronunciation, and the habit of reading are characteristic. The schools can enable the pupils to read good English and to hear it. The written reproduction of the substance of paragraphs and chapters is the best introduction to the important art of précis writing. "This exercise should never take the form of paraphrase. Paraphrase, especially of good literature, usually takes the form of converting good English into bad. Students should also be asked, not merely to reproduce what has been read, but to write on topics suggested by that reading; and this in turn should be varied by composition relating to such business affairs as are within the range of the student's experience or imagination. Especially in the second year increasing use should be made of the student's experience, views, and ideas."

The vexed question of the teaching of formal English grammar is referred to, and the conclusion is: "Grammar should be taught incidentally as occasion arises, and it should never be forgotten that in living languages use controls grammar and not grammar use."

Surely English should find a place in, at least, some of the senior and advanced courses; yet it appears but once, and then as an alternative to a modern foreign language, or as an elective. The "important" and rather difficult "art of précis writing" and reporting need careful teaching and much practice; they can be made the means of conveying a quantity of general present day information from a variety of sources.

The arithmetic syllabus is wisely cut down; cost calculations, the application of proportion, with decimalisation and de-decimalisation of money, are the basis in the junior courses; scale drawings, mensuration of simple areas and volumes, and the extraction of square roots are added in some cases. The same ideas are treated in the senior courses, where Stock Exchange, foreign exchange, compound interest, and partnership calculations have a place. All examiners in arithmetic should be required to read the paragraphs of the memorandum dealing with their subject; their papers would then be far less open to criticism than they now are.

Book-keeping, accounting, and the principles of accounts form an essential element in the equipment of every business man or woman; his transactions are measured in £ s. d., and the record of them must be accurate, systematic, and complete. Three methods of approach are noticed: one, that of journalising all transactions, is out of date, but has the merit of following the historical order of development; the second has the advantage of following closely the actual order in which the records of transactions are made in the various books of the merchant; the third, however, is essentially the teacher's approach—it goes straight to the root of the matter, and the principles, when presented in connection with a transaction within the knowledge of the pupils, are easily grasped.

Business economics, or the theory and practice of commerce, forms the central idea in the senior courses. It appears in an elementary form in some junior courses where the retail trade and wholesale trade are dealt with very briefly.

In the business economics of the senior courses some general economics precede the description of retail trade; production and capital are considered and the ideas of the junior syllabus are developed. In the second year after revision of the first year's work come: the constitution of the firm, the mechanism of exchange, the commercial side of manufacturing business, carriage of goods by sea and marine insurance, and foreign intermediary trade. The Memorandum devotes considerable space to some of these subjects; for instance, the mechanism of exchange occupies five sections, in some of which are four or five

sub-sections (e) (ii); a short sub-section is as follows: "LONG RATES OF EXCHANGE.—The class will proceed to the treatment of long rates of exchange. The relation will be found of the three months' rate of exchange of London on Paris, the cheque rate of exchange of London on Paris, and the Paris rate of discount appropriate to the three months' bill; and the relation also of the three months' rate of exchange of Paris on London, the cheque rate of exchange of Paris on London, and the London rate of discount appropriate to the three months' bill. Arithmetical exercises on the foregoing should be worked, including exercises in rates of exchange between London and other places than Paris. These exercises will be followed by the consideration of the cost in London of a bill of exchange drawn in London on Paris or other foreign place with a currency longer or shorter than three months (or the period for which the long rate is quoted); and the cost in a foreign place of a similar bill drawn on London. Arithmetical examples should be worked."

In the advanced courses the treatment of the parts of the subject taken is more detailed.

In both junior and senior courses a geography syllabus is given, with but little comment. May not teachers of geography take this as evidence of the excellence of their work?

The teachers of shorthand, on the other hand, will read with mixed feelings: "In no subject is the waste of effort so great. . . . Shorthand is, of course, a subject of educational value; for besides its merits as an accomplishment, it is of indirect service as a mental discipline; but it is sought to be learned and is taught from purely utilitarian motives, and no sane person would learn it merely for the sake of learning it. To copy longhand words or phrases in order to turn them into shorthand is not merely waste of time, but a psychological blunder. . . . the prevalence of much transcription from longhand is one of the reasons for the slow progress in shorthand which is widespread."

Modern foreign languages form elective subjects of both the senior and the advanced course. The classification of students should be independent of that for the fixed subjects of the course. It is suggested that the first grade of work should be common to both the commercial and literary students; if the work can be carried to a higher grade, "a bifurcation into a commercial class and a literary class is recommended, the former catering for those who will fill posts connected with the active promotion of their firm's foreign trade. In the commercial course, social and economic literature, both of a permanent and an ephemeral character, and particularly literature dealing with trade and finance, will occupy an important place."

The period before bifurcation will, in the case of French "occupy, as a rule, three years"; in the case of German or Russian two years, and of Spanish and Italian, under favourable conditions, one year. The longer period for French is suggested on the ground that the students taking other languages have more linguistic ability and more energy.

The "certain essential points" to which the Memorandum draws attention are phonetics, grammar, literature, free composition and translation into the foreign language, and the technique of instruction.

After referring to the age of the evening student the paragraph on technique continues: "It may be assumed, however, that the student attends the evening class in order to learn; and it is well that he should be made to understand that an art cannot be learned without practice. The active participation of the student in class exercises is, indeed, a condition of successful teaching. Moreover, individual effort and individual performance are required."

"In many institutions, especially the larger ones, it will be found desirable and possible to provide appropriate courses for non-commercial employees." Where a sufficient number of pupils can be obtained to justify separate treatment for those in the employment of professional men (other than accountants), municipal servants, and civil servants, "some differentiation is called for at the senior stage."

A typical course, designed for solicitors' clerks, has English, book-keeping, and legal practice and procedure for fixed subjects, and shorthand, arithmetic, and a modern foreign language as elective subjects, one to be selected.

Enough has been written to show both the excellence and the detailed nature of the suggestions put forward by the Board. The inspectors responsible are to be congratulated upon the thoroughness with which they have completed their task. They have set a high standard of attainment before the teachers in the evening schools, and have put before the organisers of continuation schools a thoroughly practical, interesting, and educative curriculum. But what of the teachers? Accounting and business economics are two subjects in which it is most dangerous to entrust classes to men—or women—with only a text book knowledge of the subject they propose to teach; upon business economics a crop of text books may be expected in the near future; many will be no better than existing ones, and very few of these are even good. It is then unsafe to entrust the teaching to teachers who have taken an interest in commerce and read up the subject; it is necessary to find men and women with knowledge and experience of commerce, and to train them to teach. Thus may the deepest pitfalls be avoided.

One result of the new Education Act will be to increase the number of pupils remaining at school up to sixteen years of age. Many of the schools at which the leaving age is sixteen-seventeen might well have in their top class a distinctly vocational bias; schools of commerce are being started in many of the more populous centres: when will the Board continue the good work now begun—help them instead of leaving the new heads when appointed to write to and when possible to visit the universities and schools that have schemes already in working order?

### Degrees in Commerce.

Mr. C. E. Town, Assistant Secretary of the London Chamber of Commerce, writes:

London University's liberal action in instituting degrees in Commerce makes one chary of carping at any of the details. Nevertheless, the authorities will perhaps pardon me for urging upon them a change in the time set down for the attendance of students, 6 p.m. being to many an inconvenient, if not impossible, hour. Take, for instance, the young man who is engaged in the City. At the close of the usual official hours, he finds himself unable to avail himself of the opportunities for evening preparation, since his duties do not cease before 6 p.m. Hence, not possessing the gift of Sir Boyle Roche's bird, he cannot be at the recognised colleges, polytechnics, etc., at that time. When the London Chamber of Commerce conducted lectures and classes for students desirous of entering for the Senior Examinations, 6-30 p.m. was found to be the most suitable hour for attendance. I understand that the University has been approached on this point, but at present it is doubtful whether they will move in the direction necessary to meet city men's requirements. In giving publicity to this letter, you may obtain from those interested an expression of opinion on the subject, an opinion calculated, perhaps, more than this effort of mine to influence the University to remove what is to be regarded as a serious obstacle in the path of students anxious to qualify for a Degree in Commerce.

## PUBLICATIONS RECEIVED.

## NUMBER STORIES OF LONG AGO.

By DAVID EUGENE SMITH, Professor of Mathematics in Teachers' College, Columbia University.  
142 pages. Illustrated. 2s. 3d. net.

## NUMBER PUZZLES BEFORE THE LOG FIRE.

By the author of "Number Stories of Long Ago." 14 pages. 6d. net.

**Number Stories of Long Ago** gives, in the form of stories told to children, a brief history of the science of numeration in different countries and ages. It tells, among other things, of the world's attempts to count, and of the methods of writing numbers adopted by the peoples of the ancient world; describes the evolution of the modern adding machine from the Roman *abacus*, and narrates how the children of long ago multiplied, divided, and wrote fractions. The book is a mine of information on a subject which has an important place in every child's school life, and on this account will interest both the pupil and his teacher. It contains many illustrations, eight of which are coloured, and a collection of curious old number puzzles.

**Number Puzzles before the Log Fire** consists of the number puzzles given in "Number Stories of Long Ago," together with their solutions.

## The CARSON-SMITH MATHEMATICAL SERIES.

By G. ST. L. CARSON, M.A., M.Sc., Reader in Mathematics in the University of Liverpool, formerly Head Mathematical Master in Tonbridge School; and DAVID EUGENE SMITH, Ph.D., LL.D., Professor of Mathematics in Teachers' College, Columbia University.

During the past five years the Carson-Smith Mathematical Series have been undergoing the practical test of class-room use in the hands of many teachers of experience. In that time they have successfully established themselves as thoroughly sound, practical, and teachable books—books which meet the demands of modern mathematical education both in its spirit and its requirements. A prospectus of the Series will be sent post free on application.

### ELEMENTS OF ALGEBRA.

Part I. 340 pages. Illustrated. 3s. 6d. net.  
Part II. 214 pages. Illustrated. 3s. net.  
Parts I and II. 538 pages. Illustrated. 5s. 6d. net.

### PLANE GEOMETRY.

Part I. 266 pages. Illustrated. 3s. net.  
Part II. 216 pages. Illustrated. 3s. net.  
Complete. 482 pages. Illustrated. 5s. 6d. net.

ANSWERS CAN BE OBTAINED TO BOTH BOOKS IF DESIRED.

### THE TEACHING OF ARITHMETIC.

By DAVID EUGENE SMITH. 196 pages. 5s. 6d. net.

### THE TEACHING OF GEOMETRY.

By DAVID EUGENE SMITH. 339 pages. 6s. net.

### ESSAYS ON MATHEMATICAL EDUCATION.

By G. ST. L. CARSON, M.A., M.Sc., Reader in Mathematics in the University of Liverpool. 139 pages. 4s. 6d. net.

### ELEMENTS OF THE DIFFERENTIAL AND INTEGRAL CALCULUS.

By W. A. GRANVILLE and P. F. SMITH. 463 pages.  
12s. 6d. net.

This book is suitable for the pupil who has completed an introductory course but is not yet capable of working with advantage from larger advanced treatises on the calculus. It includes a large number of examples without answers, miscellaneous examples, and much practical problem material based on knowledge that all students of the calculus should have at their command.

### THEORETICAL MECHANICS.

By J. H. JEANS. 364 pages. 12s. 6d. net.

A one year's course for students beginning the study of theoretical mechanics. The subjects dealt with are the general principles of dynamics, the laws of motion, statics, and dynamics of a particle and of rigid bodies. Care has been taken to illustrate all principles and results by a series of practical examples and applications. The amount of mathematics in the text has been reduced to a minimum.

### AN ELEMENTARY COURSE IN DIFFERENTIAL EQUATIONS.

By E. J. MAURUS. 3s. 6d. net.

A course which serves the double purpose of providing exercises in integration and of giving that thorough grounding in the methods of solving commonly occurring types of equations which students should possess before going on to applications or more advanced theory. The book contains some three hundred and fifty examples with answers.

### PROJECTIVE GEOMETRY.

By O. VELEN and J. W. YOUNG. In two volumes.  
Volume I. 344 pages. 17s. 6d. net.  
Volume II. 511 pages. 25s. net.

In this work the authors have co-ordinated and expounded the logical principles which are the foundation of all purely mathematical sciences. In Vol. I the assumptions which form the basis of general projective geometry are discussed and their consequences developed to some extent, though the more subtle ideas associated with the study of linear order and continuity are treated in Vol. II. The second volume includes chapters on foundations (including discussions of order and continuity referred to above); elementary theorems on order; the affine group in the plane; Euclidean plane geometry; ordinal and metric properties of conics; inversion geometry and related topics; affine and Euclidean geometry of three dimensions; non-Euclidean geometries; and theorems on sense and separation.

### GOURSAT'S COURSE IN MATHEMATICAL ANALYSIS.

Translated by E. R. HEDRICK.

Volume I. Derivatives and Differentials, Definite Integrals, Expansion in Series and Applications to Geometry. 548 pages. 17s. 6d. net.  
Volume II. Part I. Functions of a Complex Variable. 259 pages. 12s. 6d. net.  
Volume II. Part II. Differential Equations. 300 pages. 12s. 6d. net.

A complete list of publications in Elementary and Higher Mathematics will be sent post free on application.

LONDON, W.C.2.**

**PRIMARY SCHOOL NOTES.**

**Feeble Minds and Feeble Health.**

A new way of regarding the diseases of childhood is suggested after reading a report recently issued by Dr. Hamer. Illness in early life has a greater effect than is commonly supposed upon the mental condition in later years. It is found that there is a higher incidence of the more serious physical defects among children attending schools for the mentally defective. Thus :

" External diseases of the eyes are twice as common among the mentally defective as among the normal children; the percentage of mentally defective with good vision is less than that of normal children ; disease of the ears is one and a half times as common in the mentally defective and hardness of hearing four times as frequent. The special incidence upon the children classed as mentally defective of defects of the sense organs raises the question whether, if these defects could be prevented, fewer children would need to be relegated to the special schools."

This is a matter that requires research. The following table shows the nature of the conditions found among the children certified suitable for admission to physically defective schools :—

	No.
Infantile paralysis.....	153
Cerebral paralysis .....	22
Various paralysis .....	24
Tuberculosis of bones and joints.....	284
Heart disease.....	295
Congenital deformities .....	49
Various deformities .....	63
Other diseases .....	106
<hr/>	
Total .....	996

It will be seen that, in rough figures, infantile paralysis, tuberculosis, and heart disease accounted for 73 per cent. of the whole. Now, infantile paralysis is largely a preventable infectious disease (poliomyelitis), tuberculosis is a preventable disease, heart disease in children almost invariably, when not congenital, follows upon an infection. It remains to be proved whether, if the children had not suffered from these preventable infections, they would have become feeble-minded at all.

**Barefooted School Children.**

In his annual report Dr. Kirkhope, school medical officer for Tottenham, expresses the opinion that, having regard to the cost of shoe leather, and the dilapidated condition of the boots and shoes that many of the children in the schools in the poorer districts wear, it would be much better for them to go barefooted, in the summer at any rate. In his opinion the injury to the health of children by wearing ill-fitting and dilapidated shoes is greater than would be likely to be occasioned by the children's admission into school barefooted.

**Leicestershire Schools.**

The sixty-fifth quarterly report of the Education Committee, as presented to the County Council for Leicestershire, shows that the schools are beginning to recover from the effects of the war. The average attendance in elementary schools has risen from 83 to 90 per cent. ; the full scheme of medical inspection has been resumed, and certain new schools are projected. The committee has taken the wise step of obtaining information concerning various housing schemes in the county in order that schools may be provided without delay. Arrangements are also in progress for grouping small schools in certain districts so as to render the organisation of education more efficient and economical. The number of pupils attending the elementary schools is 36,158.

**School Journeys from London.**

The London Education Committee has issued regulations showing how it is proposed to carry out the section of the Act relating to school journeys. The proposals may be summarised thus :—

(1) The travelling expenses of the teachers (including the cost of one return journey for making preliminary arrangements) and the cost of their board and lodging will be borne by the Council. The maximum payment for board and lodging will be £2 2s. per week to each teacher.

(2) Schools will be classified according to the financial position of the parents, and grants will be made at the following rates per child per week :

A	B	C	D
15s.	11s. 3d.	7s. 6d.	3s. 9d.

(3) The maximum number on which the L.C.C. will pay will be :

Grade I.	Grade II.	Grade III.
20	40	60

(4) Duration of school journeys limited to a fortnight.

(5) All travelling expenses (except those of teachers) will be borne by the school.

(6) Balance sheet for each journey to be presented to the L.C.C.

(7) Special equipment not to exceed £5 for each journey.

(8) Salary of supply teachers paid by L.C.C.

**London Classes for Teachers.**

The London County Council has issued its " Handbook of Classes and Lectures for Teachers " for the Session 1919-1920, with a Form of Application to be used by those desiring to attend. This form is No. H.445, and it may be obtained by sending a request, with a stamped and addressed foolscap envelope, to the Education Officer, L.C.C. Education Offices, Victoria Embankment, W.C.2. It is important to note that the lectures are open to all teachers actually employed in teaching within the Administrative County of London, irrespective of the particular institution at which they may be engaged. Teachers employed in teaching elsewhere than in the Administrative County may be admitted where accommodation permits, with the exception that they are not eligible to apply for the free places given by the Council in connection with University College, King's College, the London School of Economics, and the Institut Français du Royaume Uni.

The programme of lectures and classes is an extensive one, certain pre-war courses having been revived, and the number of classes increased to the average maintained before the war. A hope is expressed that the courses to be held in the coming winter will be found helpful and stimulating in connection with the work of reconstruction, a large share of which must necessarily fall on the shoulders of the teaching profession. The lectures cover a wide range of topics, and include many which are not directly connected with teaching. Perhaps they are the more valuable on this account, and experience has certainly shown that teachers are not slow to appreciate good lectures on general themes. Last year Mr. John Drinkwater addressed crowded audiences at the London Day Training College on " Modern Poetry." This year he is to give eight lectures on " The Way of Poetry," while Mr. Laurence Binyon is to give a similar number on " Types of English Poetry." Among other notable names on the list are Mr. Raymond Unwin, Prof. Adshead, Prof. Foxwell, Mr. Wm. Poel, Prof. Boas, Prof. Lyde, Mr. P. A. Wells, Mr. H. J. Mackinder, Dr. J. E. Borland, Prof. Adams, Prof. Nunn, Prof. Spearman, and Mr. Cyril Burt. Our London readers will do well to obtain particulars of these admirable facilities.

## ASSOCIATION NEWS.

**The Teachers Council.**

Up to and including Thursday, the 21st August, the number of applicants for admission to the Register was 29,314. Applications are now being received at the rate of about 140 a week.

The Kent Education Committee recently invited applications for the post of headmaster in twenty-eight schools where vacancies had occurred during the war and had been left over in order that the permanent posts might not be filled during the absence of qualified teachers with the forces. The Committee made it a condition of appointment that the candidates should be Registered Teachers. This provision has had a far-reaching result in arousing interest in the Official Register, and it is to be hoped that other appointing bodies will follow the excellent example of the Kent Education Committee.

The Council has recently been engaged in framing the general conditions necessary to be observed by institutions which propose to offer a course of training in teaching such as will qualify persons for registration under the permanent conditions which come into operation after the end of next year. One gratifying result of the Council's work in this connection is the establishment of training courses at the Royal Academy of Music and the Royal College of Music. Hitherto there has been very little in the way of systematic training in teaching for those who intend to take up the teaching of music. It has been assumed, in too many cases, that a fair proficiency as a performer was an adequate equipment for a teacher, and institutions justly celebrated for training musicians have paid little regard to training teachers. It is one of the objects of the Teachers Council to affirm the principle that a teacher should know something of the craft of teaching in addition to knowing the subject he proposes to teach. Without seeking to lay down any hard and fast rules as to "method" or trying to enforce any uniform scheme of "training," the Council is seeking to develop in every branch of teaching work some provision for giving to the young teacher an opportunity for considering the principles of his calling.

**The College of Preceptors.**

In connection with the Lectures on Education, delivered at the College during the winter session by Professor Adams, it is proposed to institute a plan for the training of teachers of commercial subjects. The scheme provides for lectures and discussion classes, teaching practice, demonstration lessons, and visits to schools where commercial subjects are taught. The classes and other work will take place in the evenings so as to afford opportunity for the attendance of teachers who are engaged during the daytime.

**National Federation of Women Teachers.**

The Federation has addressed to the President of the Board of Education a letter strongly protesting against the constitution of the teachers' side of the new Standing Committee on Salaries. It urges that the special interests of women teachers will not be adequately represented through the National Union of Teachers, and declares that the prevailing "unrest" among teachers is due in large measure to the existing "sex-differentiation" in salary scales. The attitude of the Federation is indicated by a suggestion that the members should proceed to form a strike fund.

**The Froebel Society.**

At Westfield College, Hampstead, the Froebel Society has just concluded a most successful vacation course for teachers in kindergarten and junior schools. The work was under the general direction of Miss L. James, B.A., Head of the Kindergarten Training Department of the Clapham High School. The principal subject was "Education and Reality," and various addresses were delivered on different topics in relation to this general theme.

## BLUE BOOK SUMMARY.

**The Supply of Teachers.**

In a circular to Local Education Authorities (Circular 1124), dated 2nd August, the Board emphasise once more the urgent need for improving the supply of teachers, and especially the duty of each Local Authority to secure a proper recruitment within its own area. It is pointed out that in several great districts which contain a very large proportion of the town population the authorities draw the main part of their staffs of teachers from outside their own areas, and so drain the remainder of the country without making any considerable contribution in return to the national supply. The total of certificated and uncertificated teachers in public elementary schools in 1915 was 150,000. The normal wastage is 9,000 a year, or 6 per cent. To this must be added loss due to the war, and a further supply is also required to meet the demands of the new Act. Altogether it is estimated that in addition to the 9,000 teachers required to replace normal wastage a further 6,000 will be needed, making a total of 15,000 recruits per annum. At present the number of recruits is less than half this number, and it is steadily decreasing.

It will be seen that in order to maintain a proper supply of teachers the existing total of 150,000 should receive an increase of ten per cent. per annum, and accordingly each Local Authority should aim at recruiting within its own area a number of young teachers equal to one-tenth of its existing staff. In Greater London, which employs one-quarter of the total number of teachers in England, the percentage of local recruits to existing staff is only 1.9. In Lancashire and Cheshire it is 2.9; in Liverpool, 1.8; and in Manchester, 2.7; while in some of the Midland districts the percentages are: Birmingham, 2.4; Wolverhampton, 1.9; Smethwick, 0. The figure for the whole of Yorkshire is 4.1; but that for Leeds alone is 1.1; Middlesbrough has 6.3; Gateshead, 6.1; South Shields, 6.0; and Oxford 8.6; Portsmouth, 5.0; Norwich, 3.8; and Bristol, 2.5.

It is clear that in our large centres of population the work of a teacher in elementary schools is not held to be attractive, and, despite the Board's evident anxiety to stimulate local recruiting, it is necessary to look deeper into the problem before suggesting that the Local Authorities are negligent. Such negligence as exists takes the form of a failure to understand that not only salaries but the whole conditions of the work must be improved if we are to attract the right people in numbers equal to our needs.

**Circular 1123.**

The Board have issued an explanatory circular in regard to the reasons for refusing admission to public elementary schools at dates other than the beginning of a school term. The Education Act permits a Local Authority to make regulations on this matter, and the Board now suggest that the general refusal may be relaxed in special cases, as where the child's parents have recently removed to the district, or where the child has been prevented from attending at the beginning of term by reason of illness, absence from home, or any other unavoidable cause.

**Educational Grants for Ex-Service Men.**

Under the Government scheme of financial assistance for the higher education of ex-service officers and men, the total number of grants awarded by the Board of Education now amounts to 5,400, including officers and men in about equal proportions. The courses in respect of which grants have been awarded include more than 1,000 for engineering and technological subjects, between 600 and 700 for classics, philosophy, and literature, and about an equal number for pure science and mathematics. Applications are still being received in large numbers, and are being dealt with at the rate of more than 200 a day.

# ST. THOMAS'S HOSPITAL.

FOUNDED C. 1200.

## Medical School

(UNIVERSITY OF LONDON)

*Dean:* SIR CUTHBERT S. WALLACE, K.C.M.G., C.B., M.B., B.S., F.R.C.S.

St. Thomas's is situated on the south bank of the Thames, opposite the Houses of Parliament. Easy access from all parts by train, 'bus, and tram.

The Hospital contains over 600 beds; the Wards, the Out-patient and many Special Departments afford exceptional opportunities for acquiring a practical knowledge of all branches of Medicine and Surgery.

Students are prepared for the examinations for the Medical Degrees of London, Oxford and Cambridge, and for the Diplomas (M.R.C.S., L.R.C.P., F.R.C.S.), of the Conjoint Board.

The entire Medical Curriculum may be taken at St. Thomas's Hospital Medical School.

*For further information and prospectus, write to the Secretary:*

**DR. A. ELLIOTT, M.A., M.D. (Edinb.), D.P.H.,**

Lambeth Palace Road, LONDON, S.E. 1.

## BOOKS OF VALUE

### TRANSPORT

THE MAGIC CARPET OF  
INDUSTRY.

By J. P. GRIFFITHS.

A delightfully fascinating, interesting, and instructive book for young people. Describing the history and development of transport by sea, road, canal, and railway.

Suitable both for individual reading and for class use.

NUMEROUS HALF-TONE ILLUSTRATIONS and MAPS.

Crown 8vo. 256 pages. 2s. 6d.

Write for copies  
for inspection.  
Ask also for our  
latest Lists.

### THE SCHOLAR'S BOOKS OF TRAVEL

FOUR BOOKS:

1. BRITISH ISLES.
2. EUROPE.
3. OTHER LANDS.
4. BRITISH EMPIRE.

Composed of choice extracts from the "travel" works of Dickens, Kingsley, Ruskin, Smollett, and others.

For class reading or silent study.

Each presents a complete travel picture—a first-hand description of lands and peoples, thus imparting a sound geographical knowledge, and at the same time creating a taste for good literature.

With ILLUSTRATIONS and MAPS.

Each Crown 8vo.

Cloth, 1s. 6d.

## GEORGE PHILIP & SON, LTD.

32, FLEET STREET, LONDON, E.C. 4.

## PERSONAL NOTES.

**Commander A. W. Buckle, D.S.O.**

The L.C.C. appointed Commander A. W. Buckle the first Director of the Camp School, established in the Upper Lodge, Bushey Park. He has been wounded three times and mentioned in despatches five times, and has three bars to his D.S.O.

**Rev. C. S. Butler, M.A.**

The Rev. C. S. Butler, headmaster of the Barnsley Grammar School, has resigned his position on attaining the age of seventy years.

**Mr. E. Graham, of Harrow.**

After 37 years' service, Mr. E. Graham is retiring from the post of master at Harrow School.

**Mr. W. M. Gardner.**

Mr. W. M. Gardner, Principal of Bradford Technical College since 1906, has been obliged to retire on account of ill-health.

**Mr. Arthur Lewis, B.A.**

Mr. Arthur Lewis, of Heywood, has been appointed Director of Education for West Bromwich. Educated at Borough Road College, University College, Aberystwyth, and Manchester University, he passed with distinction his examinations for barrister-at-law at Gray's Inn.

**Mr. P. A. Barnett.**

We congratulate Mr. P. A. Barnett on securing an apology from "Truth" as the sequel to the publication of certain reflections upon him which were promptly shown to be both inaccurate and misleading.

**Principal Roberts.**

Mr. T. F. Roberts, Principal of the University College of Wales, Aberystwyth, died on August 5th, at Westgate-on-Sea, after a long illness, aged 58 years. He was the son of a Crimean veteran of Aberdovey. After winning a scholarship at St. John's College he became Professor of Greek at South Wales University, and in 1881 succeeded the Rev. Thomas Charles Edwards, first Principal of the University College, Aberystwyth.

**Dr. Caleb Scott, D.D.**

Dr. Caleb Scott died at Didsbury, Manchester, aged 88. In 1852 he took his degree at London University and became a Congregational minister at Newland, Lincoln. In 1864 he was Professor of Mental and Moral Philosophy at Lancashire Independent College, and five years later became the Principal. The University of St. Andrews conferred the degree of Doctor of Divinity upon him in 1890, and in 1902 he was chairman of the Congregational Church of England and Wales.

**Education in the Honours List.**

In the list of King's Birthday Honours the following names appear:—

**BARONETS:**

Lt.-Col. Harry Gilbert Barling, C.B., M.B., F.R.C.S., J.P. (Vice-Chancellor of Birmingham University).

Edward Clitherow Brooksbank (Vice-Chairman of West Riding County Council, Member of the Education Committee).

**KNIGHTS:**

Alderman George Edmund Davies, J.P. (Member of Bristol Education Committee).

Professor William Boyd Dawkins, M.A., D.Sc., F.R.S. (Hon. Professor of Geology and Palæontology in Victoria University, Manchester, Geologist on Geological Survey of Great Britain, 1861-69, Curator of the Manchester Museum, 1870).

John Young Walker MacAllister, F.S.A., F.R.G.S. (President of Library Association and Secretary of the Royal Society of Medicine for the last thirty-two years).

## NEWS ITEMS.

**A School of Librarianship.**

The Carnegie United Kingdom Trust have provided £1,500 a year for the maintenance of a School of Librarianship, established by the Senate of the University of London, to be carried on at University College.

**Lady Rhondda's Gift.**

Lady Rhondda, desiring that women and girls should be taught at the Merthyr Technical School, has given £5,000 for that purpose.

**Income Tax Concession.**

Relief granted in respect to the payment of Income Tax was recently extended by the Government to include children above the age of 18 who are attending full time at school or university.

**Psychology and Phrenology.**

Mr. Alfred Hubert has been engaged by the Darlington Education Committee to determine the capacity for education of boys and girls by an external survey of their heads. Mr. Hubert has applied his tests to a number of secondary school children, and claims that he is able to show the most suitable vocations for them and therefore the best line upon which to develop their education.

**Mr. MacLaren's Generosity.**

Mr. W. D. MacLaren gave Gilwell Park, a house and seven acres of ground at Sewardstone, in Essex, to the Boy Scouts' Association.

Lieutenant-General Sir Baden Powell suggested that the property would serve admirably as a training school for scout masters and as a place for nature study and camping.

**The Cinematograph in Acton's New Schools.**

The new schools at Acton are to have a lantern lecture room, and a cinematograph may be installed.

**A Children's Library at Croydon.**

The librarian to be appointed to the proposed children's public library at Croydon will hold "story hours" and give simple lessons on the choice and use of books.

**Scottish or Scotch.**

For the first time the report on Education in Scotland was issued this year by the "Scottish" Education Department, and not by the "Scotch" Department as hitherto.

**Something New in a Salary Scale.**

All class teachers in Abertillery who have reached the age of 55 years and who have served under the authority not less than 20 years will be granted the maximum salary for head teachers.

**New Chair of Italian at Manchester.**

The University of Manchester has appointed Dr. Edmund G. Gardner as head of the new Department of Italian Studies and Professor of Italian. Dr. Gardner is Barlow Lecturer on Dante in the University of London, and is a well-known authority on Italian literature.

**Professor Vernon Harcourt.**

The death is announced of Professor A. G. Vernon Harcourt, for many years Professor of Chemistry in the University of Oxford, who died at Ryde, on Saturday, August 23rd, aged 85.

MACMILLAN & Co., Ltd., St. Martin's Street, LONDON, W.C.2.

## LITERARY SECTION.

## BOOKS AND THE MAN.

**The Retrospective Inspector.**

Some day the Board of Education will have to consider the desirability of imposing on its officials something in the nature of a solemn vow of silence which shall be operative during the early years of their retirement. It is well known that such an ordinance is imposed while an official is still in harness, but the reticence thus acquired is not always transferred to the pension age. In a double sense it is true that before an official has retired he is retiring but after he has retired he is only sometimes retiring. Sometimes, again, this deferred garrulity is piquant, as in Mr. Sneyd-Kynnersley's "H.M.I." or Dr. John Kerr's "Log-Book." Sometimes it is not merely inspiring, but even awe-inspiring, as in the spacious utterances of Mr. Edmond Holmes, that excellent example of a "prophet new-inspired."

It cannot be said that Mr. A. W. Newton, "formerly an Inspector of the Board of Education," as the title page tells us, has ranged himself with either the piquant or the inspiring in his book, recently published by Messrs. Longmans, Green and Co. at six shillings net, under the title "The English Elementary School: Some Elementary Facts about it." His aim has been that of a setting down quite simply certain facts gleaned from his experience as an inspector of schools during some thirty-eight years. The period is important, because it has been marked by a transition from the devastating conditions of the old rigid Code and payment by results to the bright promise of the Education Act of last year.

Very modestly Mr. Newton suggests that his treatment of the subject may be dull, but he claims that the subject itself is interesting. I should rather describe the book as tepid than dull. Mr. Newton has taken notes with tireless industry, and he is able to give both sides of every question, or, failing this, he will state one side and carefully remind us that there is probably another one. Here is an example from page 113: "Arguments may be found for the old plan as well as for the new. It may also be argued that, provided both principle and practice are mastered in the end, it is immaterial which is mastered first." This is not very helpful, especially when one is wondering what happens if principle and practice cannot both be mastered thoroughly. I am driven to quote another passage, this time from page 184, where Mr. Newton says: "We cannot 'stir the moral responsiveness' of a boy by telling him that there is much to say on both sides of a question." This is true enough, and its application goes far beyond the age of boyhood or the stage of elementary instruction in morals. Our author might bear it in mind when he writes his next book. I suspect that he could say some forceful things about the efforts of faddists to capture our elementary schools for their special brands of doctrine, about the duties of education committees towards children, or about the Board's scheme of physical training. Peeping through the acquired reticence of the official there are signs of very definite opinions on these and many other features of the elementary school. There is also a wealth of sound sense, free from gush, and a genuine interest in public education, free from class prejudice or patronage. If Mr. Newton will now proceed to supplement this volume of observations by one of reflections he will earn the gratitude of all who value an accurate and comprehensive description of our English elementary schools. The picture will have an added value from the fact that it will be a document for the historian. The elementary school of the past fifty years is about to disappear. The new Education Act will bring about the change by extending the scope of State supervision over all kinds of educational effort, so that we shall no longer think of a "State school" as a kind of annexe to the workhouse.

SILAS BIRCH.

## REVIEWS.

**Holiday Books.**

*The Bustling Hours*, by W. Pett Ridge (Methuen, 7s. net). We are not surprised to learn that this story, first published in March, 1919, has already gone into a second edition. It is told in its author's best vein, and concerns the war effort of Dorothy Gainsford, a London shop-girl, who displays rare talent and all that capacity for self-improvement and adroit repartee which distinguishes Mr. Pett Ridge's favourites. Unlike some of our humorous writers, he can set his people to "score off" each other without making them spiteful or vulgar. Dorothy and her family are all kindly folks, living happily in their modest surroundings, and very pleasant to meet. Mr. Pett Ridge knows London, and can describe it from the inside with gay touches and sparkling fancy.

*Across the Stream*, by E. F. Benson (Murray, 7s. net).—Archie, the young son of Lord Davidstow, and grandson of Lord Tintagel, develops signs of consumption and is sent to Switzerland. He stays in a house where his elder brother Martin had previously sojourned under the same affliction, though Archie had never even been told he had had an elder brother. Now he asks to be allowed to sleep in his dead brother's room. Here we have the material for a spiritualistic novel. The boy finds his pen setting down strange words, which are interpreted as messages from Martin. Once before, at the age of seven, when writing in his copy book, his pen, guided by some unknown impulse, had written: "Archie, do let me talk to you sometimes—Martin." His mother and governess had not told him who Martin was until those messages began to come again in Switzerland.

Archie receives one message which discloses a secret hiding place wherein are hidden Martin's earthly treasures. Archie thus inherits chocolate, a pencil, a photograph, and some specimens of handwriting unmistakably like those which his hand has produced under Martin's influence.

We next meet Archie as a young man who had spent five years at Eton and had just finished his course at Cambridge. He seemed to have outgrown his bodily weakness and also his abnormal experiences—his power of automatic writing and communicating with his dead brother. But he felt sure he could "let himself lapse into that trance condition" again. Archie is thereafter under the guidance of Martin, who, among other things, warns him against marrying a certain lady, Helena, of whom a vision appears to him, described by the author, with restrained commendation, as "a white statue from the neck of which there wriggled the tail of a worm." This vision would probably have killed Archie's admiration in any case, but we are told that Helena already has decided to bestow her hand on another. Enough has been said to show that this is a story which will appeal to those who affect seances and the revived creed of spiritualism. It reminds us of a melodrama with voices "off." We can imagine what fun Dodo would have made of it all.

*A Naval Lieutenant*, by "Etienne" (Methuen, 8s. 6d. net). The writer of this extremely interesting book is a naval officer who was present at every considerable fight in the North Sea during the War. He gives a remarkable chart of the trips made by the "Southampton," a light cruiser on which he served for some years until his transfer to a battle cruiser, and later to a shore job connected with submarines. His picture of the Navy at work is as good as anything of the kind we have read, and the story is enlivened throughout by touches of humour and boisterous fun which serve to indicate something of the spirit which helped our seamen through the dreary years. Beyond these merits is the quality of historical accuracy which will give to the book a permanent value.

*Through a Tent Door*, by R. W. Mackenna, M.D., R.A.M.C. (Murray, 8s. net). This is a real "holiday" book, written by a medical man who has seen things and reflected on them. The result is a book which is full of quiet philosophy, good humour, and good sense. Dr. Mackenna finds life very tolerable, and he is especially good company just now. As an antidote to the often depressing contents of the morning newspaper his pages will be welcome. In his own professional dialect we should describe the book as a "valuable febrifuge."

*Fishpingle*, by Horace Annesley Vachell (Murray, 2s. net). A pocket edition of Mr. Vachell's well-known and popular work, excellently produced.

# Mr. EDWARD ARNOLD'S LIST

*Two New Books Just Published.*

## ENGLISH NARRATIVE POEMS.

With Introduction by SIR HENRY NEWBOLT,  
D.Lit. 2s. 6d.

## FIRST LESSONS IN FRENCH.

By M. BAGULEY. With numerous Illustrations.  
2s. 6d.

### ENGLISH.

**Laureata and the Poet's Realm.** Two famous collections of Poetry for Schools. 2s. 3d. each Vol.

**Selections from English Literature.** Edited by ELIZABETH LEE. In four books, carefully graduated. Illustrated. Books I and II, each 236 pages, 2s. 6d. Books III and IV, each 320 pages. 3s.

**Epochs of English Literature.** By J. C. STOBART, M.A., formerly Lecturer in Ancient History at Trinity College, Cambridge. In 9 vols., 2s. 6d. each. I, The Chaucer Epoch, 1215-1500. II, The Spenser Epoch, 1500-1600. III, The Shakespeare Epoch, 1600-1625. IV, The Milton Epoch, 1625-1674. V, The Dryden Epoch, 1660-1700. VI, The Pope Epoch, 1700-1750. VII, The Johnson Epoch, 1742-1798. VIII, The Wordsworth Epoch, 1798-1830. IX, The Tennyson Epoch, 1830 to present day.

**A First Course in English Literature.** By RICHARD WILSON, L.L.D. 1s. 8d.

In this book the author has selected about fifty great writers and describes their works in a simple manner.

**A First Course in English Analysis and Grammar.** By RICHARD WILSON, L.L.D. Cloth, 1s. 8d.

**Arnold's Junior English Composition.** 1s. 8d.

**Kenny's Composition from English Models.** Book I, 1s. 8d. Book II, 2s. 6d.

**Essay Writing.** By G. KENDALL, M.A. 2s. 6d.

**Precis Writing and Reproduction.** By W. J. GRIFFITH, M.A. 3s.

**English Verse Composition.** By A. E. ROBERTS, M.A., and A. PRATT, B.A. 3s.

### HISTORY AND GEOGRAPHY.

**A Social and Industrial History of England.** By Dr. F. W. TICKNER, D.Lit., M.A., B.Sc. (Econ.) London. Illustrated, 7s. 6d. Also in Three Parts, 3s. each.

**A History of England.** By Prof. C. W. OMAN, M.P. 780 pages, 7s. 6d. In Two Parts, 4s. 6d. each: Part I, from the Earliest Times to 1603; Part II, from 1603 to 1902. In Three Divisions: Division I, to 1307, 2s. 6d.; Division II, 1307-1688, 3s. 6d.; Division III, 1688 to 1902, 4s.

**A Junior History of England.** By C. W. OMAN, M.P., and MARY OMAN. 3s. 6d.

**Arnold's Florin English History.** By C. E. M. HAWKESWORTH, M.A. 2s.

**Outlines of European History, 1814-1914.** By G. BURRELL SMITH, M.A., Assistant Master at the Royal Naval College, Dartmouth. With Maps. 3s. 6d.

**Scenes from European History.** By G. B. SMITH, M.A. 2s. 6d.

**The Last Century in Europe, 1814-1910.** By C. E. M. HAWKESWORTH. 7s. 6d. net.

**A General History of the World.** By OSCAR BROWNING. 700 pages. 7s. 6d. net. Also in Three Parts with separate indexes, 3s. 6d. net each. Part I, Ancient History; Part II, Mediæval History; Part III, Modern History.

**A Class Book of Geography.** By A. W. ANDREWS, M.A., F.R.G.S. Cloth, 7s. 6d. A systematic text-book for Upper Forms, based on the study of Physical features. Interesting Original Diagrams are freely employed.

**Arnold's Junior Geography.** By W. M. CAREY, M.A., B.Sc. Cloth, 1s. 8d.

**Outlines of Physiography.** By the late Prof. A. J. HERBERTSON. Fully illustrated. 4s.

### MODERN LANGUAGES.

**Arnold's Modern French Course.** By H. L. HUTTON, M.A. Book I, 2s. 6d.; Book II, 3s.

**Grammaire Française.** A l'Usage des Anglais. Par E. RENAULT, Officier d'Académie; Lecturer in French at the University of Liverpool. 5s.

**Petite Grammaire Française.** By E. RENAULT. 2s.

**Exercices in French Grammar.** By E. RENAULT. 2s.

**Junior French Reader.** By E. RENAULT. 2s.

**French à la Française.** By Lady BELL and Mrs. TREVELYAN. Cleverly illustrated. Book I, 10d.; II and III, 1s. each.

**Poemes Choisis.** A Book of French Poetry. Selected and Edited by R. L. A. DU PONTET, M.A. 2s. 6d.

**Arnold's Modern German Course.** By Dr. F. W. WILSON. 3s. 6d.

**First German Prose Composition.** By Dr. F. W. WILSON. 2s.

**Second German Prose Composition.** By Dr. F. W. WILSON.

### LATIN.

**Arnold's New Latin Course.** By R. M. ALLARDYCE, M.A. In Two Parts. Part I, 2s.; Part II, 3s.

**A First Latin Course.** By G. B. GARDINER, M.A., D.Sc., and A. GARDINER, M.A. 3s.

**A Second Latin Reader.** By G. B. GARDINER, M.A., D.Sc., and A. GARDINER, M.A. 2s. 6d.

**Latin Prose Composition.** By W. R. HARDIE, M.A., late Professor of Humanity in the University of Edinburgh. 5s.

**Dies Romani.** A Latin Reading Book. Edited by W. F. WITTON, M.A. 2s.

**Mirabilia.** By C. D. OLIVE, M.A. 2s.

**Livy.** Book XXVI. Edited by R. M. HENRY, M.A., Professor of Latin at Queen's University, Belfast. 3s.

### SCIENCE AND MATHEMATICS.

**Inorganic Chemistry for Schools.** By W. M. HOOTON, M.A. 5s.

**Elements of Inorganic Chemistry.** By the late W. A. SHENSTONE, F.R.S. 6s. 6d.

**Outlines of Inorganic Chemistry.** By Dr. E. B. LUDLAM. 5s.

**Mechanics.** By W. D. EGGAR, M.A. 4s.

**Electricity and Magnetism.** By C. E. ASHFORD, M.A., Head Master of the Royal Naval College, Dartmouth. 4s. 6d.

**Elements of Geometry.** By Dr. R. LACHLAN and W. C. FLETCHER, H.M.I. 3s. 6d.

**Practical Trigonometry.** By H. C. PLAYNE, M.A., and R. C. FAWDRY, M.A. 3s.

**A School Arithmetic.** By A. C. JONES, Ph.D., and P. H. WYKES, M.A. 5s. 6d. Parts I-III, 2s. 6d. each.

**Exercises in Arithmetic.** By C. M. TAYLOR. Parts I-III, 1s. 6d. each, without Answers; 2s. each, with Answers.

**The Inductive Arithmetic.** By E. SANKEY. Pupils' Books, I-III, 4d. each; IV, V, VI, VII, 6d. each. Class Teachers' Books, with Answers, Notes on Method, and Oral Exercises. Books I-III, 1s. 6d. each; IV-VII, 2s. each.

London : EDWARD ARNOLD, 41 and 43, Maddox Street, W.1.

## Education.

**THE MEASUREMENT OF INTELLIGENCE :** by Lewis M. Terman.  
(6s. net. Harrap and Co.)

The publishers claim that this is the first comprehensive and detailed account of the system prepared for the use of educators in dealing with school children, and their claim is probably justified. It is not so easy, all the same, to admit our author's claim that Binet made a startling discovery in his correlation of the physical age with the mental age. Anyone who was familiar with the deplorable developments of the old system of payment by results will remember that before the "standards" lost their rigidity, teachers and even members of the general public had got into the way of classifying children by "standards" as well as by years; and in Scotland at any rate the connection between physical age and mental age was a matter of common discussion and some opprobrium in family and social circles. Nevertheless, to Binet belongs the credit of deliberately applying more or less scientific methods to this popular correlation, and perhaps Professor Terman may be right when he maintains that Binet's "discovery" is entitled to rank "perhaps from the practical point of view, as the most important in all the history of psychology."

More important is the question of the adequacy of the present exposition of the whole subject. Here it may be said at once that Professor Terman has deserved well of the whole profession, since he has made a complete and intelligible presentation of the whole subject, taking nothing for granted and dealing with his subject matter in such a way as to enable the intelligent but ill-informed teacher to get at the essential facts and form a reasoned judgment for himself, while presenting to the well-read teacher a mass of new material.

It has to be admitted that Binet was remarkably crude in his methods, and that he made many mistakes that surprise practical teachers, however pardonable they may appear in the eyes of theoretical psychologists. It was therefore highly desirable that a competent body of investigators should take in hand a revision of the results of the pioneer. Such a body was found at Stanford University in California, and this volume gives the results of their investigations under the name of the Stanford Revision. As compared with the Binet-Simon scheme the number of tests is greatly increased, and the arrangement of those that remain is altered. Speaking generally, the revisers found it necessary to reduce the mental ages in the lower ranges of the scale, and to raise considerably the mental ages above 10 or 11 years. This means that the Binet scale was found too easy at the lower end and too difficult at the upper. All this is not of very vital importance, since after all the Binet scale was admittedly tentative. Somewhat disquieting is the suggestion that several of our traditional views are no longer valid. For example, the common opinion that extreme deviations below the median are more frequent than extreme deviations above the median "seems to have no foundation in fact." Further, investigation seems to contradict the traditional view that variability in mental traits becomes more marked during adolescence. When we come to the burning question of sex differentiation we find that Professor Terman's investigations give no countenance to the popular view based upon modern investigations that there is wider variation among boys than among girls. All our pet theories come crashing about our ears. In fact, what gives our author's views a certain stimulating influence is the conviction forced upon the reader that these views are the result of perfectly unbiassed examination of facts that have presented themselves in the course of an honest pursuit of truth for its own sake.

What makes the book of particular value to the teacher is that the various tests are not merely stated in the bald way that we find them set forth in Binet. They are fully set forth, and instructions are given for their application. Indeed, more than two-thirds of the book is given up to the description of the Stanford tests and an account of how they should be used. Dr. Terman recognises the root difficulty of the problem when he tells us that "There are no tests that are absolutely pure tests of intelligence." He is keenly alive to the interfering influences of training and social environment. Among the different conceptions of the nature of intelligence Professor Terman seems not disinclined to accept that of Binet, though he does full justice to Meumann. A satisfactory feature of our author's treatment is the recognition of the limitations of all methods of testing intelligence. Further, he is continually on his guard against permitting the assumption that intelligence tests pretend to bring out the idiosyncrasies of individual talent.

Of special interest in the Stanford revision tests is the correlation between intelligence and vocabulary. I do not feel satisfied that the method of estimating the extent of the vocabulary at various stages is sound, but there is obviously a close connection between intelligence and expression, and the investigations of vocabulary in relation to other manifestations of intelligence are likely to lead to valuable practical results. One hopeful feature about the book is the insistence upon the inexplicability of certain facts that are brought out in the investigations. It is found, for example, that the exercise of reversing the hands of the clock varies in difficulty according to the particular hour selected, and yet no reason has yet been adduced to explain this difference. The same is true of several of the other tests. An inexplicable difference is one of the finest spurs to intellectual effort, so we rejoice in the number of such problems presented in the text. We are still only on the threshold of this study of intelligence, and we are grateful to Professor Terman not only for what he has accomplished as positive achievement, but also for the stimulus he has given to his fellow workers. J.A.

## English.

**ENGLISH LITERATURE DURING THE LAST HALF CENTURY :** by J. W. Cunliffe, D.Lit. (The Macmillan Company.)

With characteristic American enterprise, Dr. Cunliffe has attempted a task from which equally capable English scholars would shrink. Twelve modern authors are dealt with in detail, while chapters are also included on the Irish Movement, the New Poets, and the New Novelists. Of the detailed studies we like best that (written by Leland Hall) of Joseph Conrad. This novelist is treated with extraordinary sympathy and critical insight. Dr. Cunliffe is perhaps not so happy with H. G. Wells and Arnold Bennett, but certainly succeeds with Robert Louis Stevenson, who is treated with a fairness and critical balance not common among his American admirers.

The title of the book is perhaps slightly misleading, for the contents are largely confined to novelists, and all other literature, including modern poets and poetry, receives but scanty treatment. It is inevitable that in such a book certain omissions should be glaring and inexplicable. Thus we are at a loss to understand why a writer such as D. H. Lawrence should be included and Quiller-Couch omitted, and why among modern poets we should find Rupert Brooke but not Sir Henry Newbolt.

Yet, on the whole, Dr. Cunliffe succeeds in a task the difficulty of which must not be underestimated. To appraise contemporary literature needs a breadth of vision and a critical appreciation not commonly found.

## ENGLISH CLASSICAL AUTHORS.

**THE TALISMAN :** Scott. Edited by C. B. Wheeler, M.A. (Oxford: Clarendon Press. 3s.)

This annotated edition produced in the usual excellent style of the series should be useful to all students. It contains the author's introduction and notes, and also editor's notes, with some twenty illustrations.

## THE TUTORIAL SHAKESPEARE.

**CYMBELINE :** Edited by A. R. Weekes, M.A. (University Tutorial Press. 2s. 3d.)

Miss Weekes has produced an edition which, with its copious introduction and notes, should be welcomed by examination students. Her introduction is particularly scholarly and appreciative of this lesser known of Shakespeare's plays.

## THE ARDEN SHAKESPEARE.

**THE SECOND PART OF HENRY IV :** Edited by L. Winstanley. (London: D. C. Heath and Co. 2s. 6d. net.)

The general aim of this series, which is literary rather than grammatical and philological, would appear to be well carried out in the present number. The editor has produced an attractive little volume which should appeal to general reading as much as to students.

## ENGLISH LITERATURE FOR SECONDARY SCHOOLS.

**MACAULAY'S ESSAY ON FRANCES BURNEY :** Edited by Alice D. Greenwood. (Macmillan and Co. 1s. 6d. net.)

This latest addition to a well known series maintains the standard of its predecessors. It contains as usual Notes, Essay Questions, and Helps to Further Study. It is intended for the fifth year of study, and aims at combining the teaching of both History and English.

(Continued on page 346.)

## UNIVERSITY OF LONDON PRESS

### EVERYMAN'S CHEMISTRY.

The Chemist's point of view and his recent work told for the Layman. By ELLWOOD HENDRICK. New Edition, with illus. Demy 8vo, 8s. 6d. net.

**NATURE.**—"The man in the street is not particularly interested in theory but prefers to learn something about practice, and it is safe to say that few popular books contain such a mass of examples of the application of chemistry to practical problems. . . . There can be no doubt the book is excellent."

**PROFESSOR J. L. PATON** (of Manchester).—"I think the book ought to be distinctly useful in the attempt to familiarise our young boys, especially classical boys, with some of the staple processes of the application of Chemistry to production and the method of scientific discovery. It is quite a live book."

### THE NEW REGIONAL GEOGRAPHIES.

By LEONARD BROOKS, M.A., F.R.G.S.

- Book I. **THE AMERICAS.** Cloth, 3s. 6d. net. (Ready.)
- " II. **ASIA AND AUSTRALASIA.** Cloth, 3s. 6d. (Ready.)
- " III. **AFRICA AND EUROPE.** Cloth. (In the Press.)
- " IV. **A SENIOR SCHOOL GEOGRAPHY.** (In Preparation.)

**THE BRITISH ISLES.** Issued separately with maps, 2s. 6d.

These volumes form a four years' Geographical Course for Secondary Schools. The old conventional order of studying the Continent is rejected in favour of a new and original grouping, offering advantages which will be obvious to every teacher of geography. The books are profusely illustrated and contain a large number of valuable questions, problems, and exercises, as well as specimen questions from examination papers.

The matter comprising Volume III has been in type for some months pending the alterations in boundaries, all of which have been given effect to in this volume.

### THE STUDENT'S GUIDE.

By JOHN ADAMS, M.A., B.Sc., LL.D., Professor of Education in the University of London. Fifth Impression. Cloth, 4s. 6d. net.

With practical pointers on how to study, how to memorise, how to take notes at lectures, how to divide one's time, how to prepare for examinations, is combined a revelation of what the student years might be—and so often are not—to the careless youth.

**THE TIMES.**—"Dr. Adams has written an admirable book, and a student may be regarded as fortunate who avails himself of its wisdom. Those who must pursue their studies without the aid of a teacher will find much in this volume which will save them from many of the pitfalls which beset their path."

### GEOGRAPHY AND WORLD POWER.

By JAMES FAIRGRIEVE, M.A., F.R.G.S., recognised teacher in the University of London in the theory and practice of Education. New Edition with 80 Maps and Diagrams. Cloth, 4s. net.

**FROM THE TIMES.**—" . . . It is a valuable review treating in a broad philosophic way the influence of physical facts upon history," and in the words of the "Glasgow Herald" reviewer, "One could not desire a more fascinating introduction to the study of world history than this masterly analysis."

### A MATRICULATION ENGLISH COURSE.

By B. J. SPARKS, B.A., B.Sc. Cloth, 3s.

This book covers efficiently the whole of the ground in English Grammar and Composition for the London University Matriculation and Examinations of similar standard.

### A SCHOOL OF CHEMISTRY.

By W. H. RADCLIFFE, B.Sc., F.C.S., Chemistry Master of Tenison Schools. Part I, 3s. Part II, 1s. 6d.

### A SHORT HISTORY OF MODERN EUROPE

From the French Revolution to the Great War.

By EUGENE L. HASLUCK, B.A. With many specially prepared Maps. 3s.

### ECONOMIC GEOGRAPHY OF THE BRITISH EMPIRE.

By C. B. THURSTON, B.Sc., Geographical Master at Kilburn Grammar School. With specially prepared Maps and Tables. Cloth, 4s. 6d.

### UNIVERSITY OF LONDON MATRICULATION EXAMINATION.

**ENGLISH PAPERS** (September 1915—June 1918)

Bound up together 1s. 6d. net. Postage, 2d.

**ARITHMETIC AND ALGEBRA** (with Answers).

**GEOMETRY AND MECHANICS** along with

**MATHEMATICS MORE ADVANCED**

(with Answers) (September 1915—June 1918).

Bound up together. 2s. net. Postage, 3d. extra.

18, Warwick Square, London, E.C. 4.

## THE MCDUGALL

LIST

### AN ATLAS—Revised to July, 1919

A new edition of McDougall's School Atlas of Coloured Political, and Photo-Relief Physical Maps, will be ready in a week or two. It contains all the territorial changes made by the Peace Conference. An ideal Atlas for Junior Forms. 23 Coloured Maps, 16 Physical Maps, 15 Diagrams. Stiff Boards, Cloth Back. 1s. 2d. net. With Index, 1s. 3d. Full Cloth Boards and Index, 1s 9d. net.

### MON PETIT CAMARADE FRANCAIS

**Livre Premier.** Par L. LAVALT, Paris; P. LES-TUNG, Marseille; et B. DUMVILLE, London. Follows in the main the principles of the New Method. Copiously Illustrated. 272 pages. 2s. net.

### PETITE ESQUISSE DE LA LITTÉRATURE FRANCAISE

By J. E. MANSION, B. ès L. An Excellent Selection. New Edition. 2s. net.; boards.

### EXTRAITS DES AUTEURS FRANCAIS DU XVII<sup>ME</sup> SIÈCLE

By J. E. MANSION, B. ès L. 288 pages. Cloth Boards, 2s. 6d. net.

### MCDUGALL'S PREPARATORY FRENCH

An easy, pleasant introduction. Cloth, 10d.

### FABLIAUX FRANCAIS

A simple, attractive Illustrated Reader. 1s. 6d. net.

### GATEWAYS TO BOOKLAND

A series of delightfully Illustrated Literature Books for pupils of from 9 to 14. A very wide range of authors of all periods is drawn upon.

Winged Flights into Story Land 2s. 4d. Within the Gates 3s.  
Vistas of Romance - - - 2s. 8d. In Kings' Gardens 3s.

### REGIONAL GEOGRAPHY OF THE WORLD

A Modern Scientific Treatment. Contains an abundance of Contour Maps in Colour and Black and White, with many Diagrams. A section of questions based on the text is a very valuable feature. Revised to date. 224 pages. Cloth covers, 2s. net.

### EVERYDAY COMPOSITION

A new book of Hints and Helps in Letter and Essay Writing. Excellent in every way. Cloth limp, 1s. net

### PLAIN-TEXT SHAKESPEARE

In this edition of English Classics are given the greater plays of Shakespeare, unabridged but carefully edited for schools, and without notes. The books are full crown 8vo in size, most clearly printed, and bound in limp cloth. Price—each 6d. net, except Hamlet and Coriolanus (each 9d. net), and Richard II and King Henry V (each 8d. net).

### CONCISE SCHOOL DICTIONARY

Over 15,000 Words, Phrases, etc. Exceedingly useful Appendixes. Boards or Limp Cloth, each 9d. net.

### SONGS OLD AND NEW

Contains 9 National, 10 British, 5 New Folk, 8 Classical Songs, 4, Glee, 19 Rounds. In Staff or Sol-Fa. Paper, 6d.; Cloth, 8d.

Piano Edition, 4s. 6d. net; by post, 5s.

ADDRESS YOUR INQUIRIES TO  
MCDUGALL'S EDUCATIONAL Co., Ltd.,  
8 Farringdon Avenue, London, E.C.4.

**A NEW GRAMMAR BOOK :** by Agnes Catnach, B.A. (Blackie and Son, Limited. 2s. 6d. net.)

"New" books on English Grammar are a weariness to reviewers. The one before us does not appear to be "newer" than any of its predecessors, and indeed contains less novel features than many. It may possibly find a place in a few girls' schools, but we think that the compiler of this, and those who are likely to produce similar books, would do well to pause, and to spend their energies in more really educational ways.

**THE NEW ENGLISH BOOKS :** A graduated course of English Composition in Five Books, for Primary and Secondary Schools : by W. J. Glover. (Book I, 8d. ; Book II, 8d. Geo. Philip and Son.)

Mr. Glover has made a good beginning, and has produced two very good little books. With a minimum of formal grammar and a wealth of good models, he leads the pupil through all varieties of composition. He would appear to be a persistent advocate of Stevenson's "sedulous ape" theory of learning to write, which is perhaps as good a way as any other for beginners. We shall welcome the other books of the series, if only to see with what success the compiler maintains his "concentric" scheme.

SCRUTATOR.

### Modern Languages

**H. L. Hutton : VICTOR HUGO'S RUY BLAS.** (Clarendon Press. 3s. 6d. net.)

A well printed book, with interesting introduction, notes, two appendices, on grammar and rimes respectively, and bibliography, in all of which (including the bibliography) great prominence is given to the technique of drama and of versification.

**J. G. Bartholomew and E. Jefford : PARIS POUR TOUS.** (Dent Collection Gallia.)

The text, beautifully printed, is written in the usual style of guide-books, and contains the usual sort of information. Mr. Bartholomew's maps, like most English-printed ones, have an illusory appearance of clearness, due to the fewness of the names inserted, and the thin, faint lettering. (An English map was once issued at the front with faint grey-green lettering, which couldn't be seen at all in the dusk. It was beautifully clear-looking.) French maps, on the other hand, look black and confused at first, but those who worked with the French armies know how easy it is to find any name in their clear jet-black type.

**Noëlia Dubrule : LE FRANCAIS POUR TOUS.** (Ginn.)

A carefully worked out Direct Method book, containing some valuable suggestions to teachers, with model lessons in detail. The type and the pictures are admirable.

### Economics.

**PRINCIPLES OF POLITICAL ECONOMY :** by Thomas Nixon Carver, Professor of Political Economy in Harvard University. (Ginn and Co. 8s. 6d.)

This new and interesting statement of the principles of Political Economy by an American Professor should have a welcome reception by English readers. Never was there a time when the reinforcement of the principles of that science was more urgently required, never was it more necessary to expound again the nature, sources, and causes of the means of subsistence and all that is included under the term *Wealth*. After nearly five years of its destruction by warfare we find the waste of wealth continued in every kind of extravagance and folly ; excessive wages and prices ignoring all economic laws, ruinous taxation, projects for reducing the supplies of wealth by reduction of produce coincident with demands for increased wages for less work. The most elementary ideas as to the origin and nature of wealth are wanting, while the demands for its enjoyment are increased.

There is indeed a pressing necessity for the diffusion of knowledge of the elements of economics and for the study of treatises, new and old, to restore and extend sound ideas of the origin and nature of wealth. This new treatise supplies in a remarkably

clear and convincing manner a presentation of the fundamental facts and principles of economics, and may be strongly recommended to the British public for its simplicity and its luminous treatment of the problem of material welfare. The author is obviously a teacher skilled in the art of analysis and clear exposition. His numerous illustrations are apt and most suggestive ; the book is calculated to stimulate interest by its very practical bearing upon the fundamental conditions of life. Though the order of treatment follows the usual lines, it is original in its studied simplicity of style ; this will tend to stimulate students to further economic enquiry in the standard works and sterner writings of the classical economists.

An abundance of original illustrations render the book attractive, and it will be popular with readers unfamiliar with economic literature. Prof. Carver's phraseology has some local colour which renders it attractive by its clearness and simplicity of style, and also by its very human sentiment and amplitude of illustration. He has the art of enforcing principles by apt and abundant examples illustrating their bearing upon life.

The book is pleasant reading ; the social atmosphere and simplicity of the early chapters will carry students on to the stiffer theory which follows. One novel feature of the book is the illuminating treatment of the economic relations with the principles of law, government, morals, and religion, and also the importance and bearing of geographical discovery upon economic conditions. The more technical and abstruse doctrines of value and exchange and the principles of distribution are expounded and illustrated simply. The principles of taxation are discussed with some brevity and are mainly confined to theory. A chapter is devoted to the financial situation which has arisen out of the war ; this is descriptive rather than analytic, showing the effect of the war on the wealth of the country and its influence upon taxation and the economic conditions of different classes.

A final chapter, under the heading of Reform, discusses various schemes which have been proposed for the reorganisation of industry, showing the futility of the projects for Socialism and Communism, and the nature of other proposals bearing upon the problem of the inequality of wealth, the causes of poverty, or grounds of inequality of wealth.

Prof. Carver has produced a most readable and instructive book : it is the work of a teacher profoundly conversant with the history and theory of the subject and its concrete application. It is concise and vivid in style, and conveys sound economic doctrine in a manner easy to comprehend. It enlivens the theory with much interesting illustration. If any adverse criticism be made it would be with the over-elaborated analysis and classification given in the tables. Some points mentioned hardly justify their presence in the scheme, but they may be suggestive as being on the borderland of economics.

An occasional Americanism in spelling or expression indicates the parentage of the book. The volume is a very comprehensive and useful piece of work, and should have a distinct field of utility. Its studied simplicity and clearness will give it popularity and render it a useful introduction to the study of economic relations in the tangled web of human affairs. It is a worthy attempt to simplify and popularise the study of economic relations which are inevitable in any form of social organisation, but very complex and interwoven in the more highly civilised societies.

### Geography.

HUMAN GEOGRAPHIES: by Fairgrieve and Young.

Book I. Children Far Away. 1s. 6d.

Book II. Homes Far Away. 1s. 6d.

Book III. The British Isles. 1s. 9d.

The authors of this new series we know to be well equipped for their task, yet we confess to some disappointment at the contents of these three books. Though loudly proclaimed as new and original, the matter and arrangement are largely conventional and stereotyped. Book I deals with six types of children, and Book II with ten types of people. Both are written in simple language by Mr. Young. The selection of types, however, is curious, and seems to be governed by conventional and traditional ideas rather than by relative importance. Eskimos, Red Indians, and Pigmies are undoubtedly interesting folk, but to give each of these as much space in a book as the Japanese is to lose one's geographical balance and perspective. Nor can we understand the principle of selection which gives Norwegians and Swiss as typical of Western Europe.

Book III deals with the British Isles, and the jump in difficulty and treatment to this book from the first two is very great—too much altogether we consider for a graduated series. The matter is treated by the familiar device of a series of imaginary journeys. "Exercises" are now included, though these are of unequal merit and difficulty. Thus to one chapter we find: (a) Make a scrap-book for pictures and postcards to illustrate this lesson; (b) Draw a map of, etc.; (c) Copy the diagrams showing the position, etc. The "Orchard Lands" appear to be confined to Kent. We should like to hear the remarks of the West of England growers. The section on Maps, Contours, and Sections appears out of place in this book. From experience we know that even children in the older classes of the elementary school find such difficult, and we regard the attempt to deal with the subject in a Book III of such a series as unnecessary and even absurd. The matter is one for patient personal and practical instruction, not for reading from a book. We sincerely hope the next three books of this series will contain more "meat" than those at present before us.

THE OXFORD GEOGRAPHIES.—A PHYSIOGRAPHICAL INTRODUCTION TO GEOGRAPHY: by A. J. Herbertson. Third Edition. Revised by O. J. R. Howarth. (Clarendon Press. 2s.)

This well known little introductory book needs no recommendation. It has been considerably revised and simplified, and should find a ready welcome in schools.

MACMILLANS' PRACTICAL GEOGRAPHIES.—A GEOGRAPHY OF AMERICA: by T. Alford Smith. (Macmillan and Co. 4s. 6d.)

This is a useful addition to a well known series. The matter is divided into four sections dealing with Canada, U.S.A., Central America, and South America, and the treatment is thoroughly practical, questions and exercises being appended to every chapter. The book contains copious maps and statistics as well as other illustrations. It should be valuable alike to teachers and students.

THE NEW REGIONAL GEOGRAPHIES FOR SECONDARY AND HIGH SCHOOLS.—THE BRITISH ISLES: by Leonard Brooks. (University of London Press. 2s. 6d. net.) (Hodder and Stoughton.)

Mr. Brooks has produced a scholarly if somewhat difficult book for young students. The general treatment is sound, if

condensed, and the maps are particularly good. The author's debt to Mackinder's "Britain and the British Isles" appears to be appreciable, and might, we think, be acknowledged in the preface.

MUNDUS.

GREAT CITIES OF THE WORLD:

- |             |                |                     |
|-------------|----------------|---------------------|
| (a) London. | (d) New York.  | (g) Venice.         |
| (b) Paris.  | (e) Rome.      | (h) Constantinople. |
| (c) Berlin. | (f) Petrograd. | (i) Melbourne.      |
- (McDougalls, Educational Co. Price 2d. paper; 3d. cloth.)

These little booklets will serve as extra readers for the middle standards. Their contents are but moderate. The matter is generally mediocre and the illustrations frequently poor. Many of the cities are dealt with by the well worn device of a conversation between children and parents, a form of geography teaching which we thought was obsolete. Too frequently the authors appear to be of the casual or holiday visitor type and to be impressed by the trivialities and non-essentials. Some books, such as that on Berlin, are absurdly out of date. We think on the whole that the publishers would be well advised to employ better and less didactic writers and to issue the books in better if somewhat dearer form.

By Special Appointment.

To their Majesties the King and Queen and H.M. Queen Alexandra,

## WINSOR & NEWTON, Prepared Water Colours

IN

WHOLE and HALF CAKES, WHOLE, HALF, and  
QUARTER PANS,  
and WHOLE, HALF, and LARGE TUBES.

Quarter Pans of Winsor and Newton's Artists' Water Colours are of the same outside dimensions as the Half Pans. They may, therefore, be used in Winsor and Newton's range of Half Pan Japanned Boxes.

The advantages of habituating the Student at the outset of his career to the use of the BEST materials are so obvious that no attention need be drawn to them.

Messrs. Winsor and Newton's Artists' Water Colours are necessarily more expensive than those usually manufactured for School use, but as, owing to their superior strength, a small quantity yields approximately the same amount of colour surface as the larger pans of Water Colours generally sold for Students' use, the expense in both cases is much the same.

The special attention of Teachers and the public is, therefore, invited to these Quarter Pans of Colour, which, costing practically the same, provide the Student with a superior article.

Full detailed catalogue may be obtained from any of the leading Artists' Colourmen throughout the Country, or from 39, Rathbone Place, London, W. 1.

Established nearly a Century.

## MEDICAL PRELIMINARY EXAMINATIONS.

### THE UNIVERSITY EXAMINATION POSTAL INSTITUTION

provides courses in preparation for Medical Preliminary Examinations, more particularly for the Junior and Senior Examinations of the College of Preceptors.

Full preparation in all subjects, 120 lessons, £6; but the number of lessons required varies according to the student's knowledge at starting. Each lesson consists of very full lesson-notes, papers of questions, and answer-notes.

Oral tuition, if preferred, private or in class, with or without residence.

Prospectus and full particulars can be obtained from the Principal.

Mr. E. S. WEYMOUTH, M.A. (Lond.),  
17, Red Lion Square, London, W.C. 1.

### MATHEMATICS AND SCIENCE.

- ALGEBRA, JUNIOR.** By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 3s. 6d. With Answers, 4s.  
"Maintains the high standard of excellence we are accustomed to expect from so well known a source."—JOURNAL OF THE ASSISTANT MASTERS' ASSOCIATION.
- ALGEBRA, JUNIOR, TEST QUESTIONS IN.** By F. ROSENBERG, M.A., B.Sc. 1s. 6d. With Answers, 1s. 9d.  
"A complete series of examples carefully graded."—EDUCATOR.
- ARITHMETIC, THE PRIMARY.** Edited by WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. Second Edition. 10d. each. Part III, 1s. 3d.  
A Course of Simple Arithmetical Exercises covering all the subjects usually taught in schools, from the four simple rules to stocks and shares.
- ARITHMETIC, PRELIMINARY.** By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 2s. With Answers, 2s. 3d.  
"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—SCHOOL GUARDIAN.
- ARITHMETIC, THE JUNIOR.** By R. H. CHOPE, B.A. With or without Answers. Third Edition. 3s. 6d.  
"The book is well got up, and has a quite good selection of examples throughout."—MATHEMATICAL GAZETTE.
- ARITHMETIC, JUNIOR, TEST QUESTIONS IN.** Edited by A. G. CRACKNELL, M.A., B.Sc. 1s. 6d. With Answers, 1s. 9d.  
"No better supplement to the ordinary class-book could be desired."—SECONDARY SCHOOL JOURNAL.
- BOOK-KEEPING, JUNIOR.** By T. C. JACKSON, B.A., LL.B. 2s.  
"Students commencing Book-keeping will find this manual well-fitted to enable them to gain an early grasp of the subject."—SCHOOLMASTER.
- BIOLOGY, A FIRST COURSE IN PLANT AND ANIMAL.** By W. S. FURNEUX. 2s. 9d.  
"The object of the author is to supply beginners with a safe introductory guide to the study of animal and vegetable life."—EDUCATIONAL HANDWORK.
- BOTANY, JUNIOR.** By FRANCIS CAVERS, D.Sc., 3s. 6d.  
"Dr. Cavers has achieved a useful little book."—JOURNAL OF BOTANY.
- CHEMISTRY, PRELIMINARY.** By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 2s.  
"An excellent little book, . . . will make a clear understandable foundation for a systematic treatment of chemistry in the higher forms."—EDUCATIONAL NEWS.
- CHEMISTRY, JUNIOR.** By R. H. ADIE, M.A., B.Sc. Second Edition. 3s. 6d.  
"The results of fifteen years' experience of a thoughtful teacher are always valuable. A thoroughly sound course of practical instruction."—NATURE.
- CHEMISTRY, JUNIOR PRACTICAL.** By H. W. BAUSOR, M.A. 1s. 6d.  
"An excellent guide for the beginner in practical laboratory work."—EDUCATIONAL TIMES.
- GEOMETRY, PRELIMINARY.** By F. ROSENBERG, M.A., B.Sc. With or without Answers. 2s. 9d.  
"Will prove distinctly helpful to the beginner in the study of Geometry."—BOOKSELLER.
- GEOMETRY, JUNIOR.** By A. G. CRACKNELL, M.A., B.Sc., 3s. 6d.  
"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—SCHOOLMASTER.
- HEAT, JUNIOR.** By JOHN SATTERLEY, D.Sc., M.A. 2s. 9d.  
"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—SECONDARY SCHOOL JOURNAL.
- MAGNETISM AND ELECTRICITY, JUNIOR.** By R. H. JUDE, D.Sc., M.A., and JOHN SATTELY, D.Sc., M.A. 3s. 6d.  
"This book should not have any difficulty in holding its own, for it is one of the best regarded from the standpoint of exact thinking."—ELECTRICAL ENGINEERING.
- AN INTRODUCTORY COURSE OF MECHANICS AND PHYSICS.** By W. M. HOOTON, M.A., M.Sc., F.I.C., and ALFRED MATHIAS. 2s.  
"An excellent introduction to the fundamental principles of Mechanics, Hydrostatics, and Heat."—EDUCATIONAL NEWS.
- SCIENCE, PRELIMINARY COURSE OF EXPERIMENTAL.** By W. M. HOOTON, M.A., M.Sc. 2s.  
A course of Science training for beginners in accordance with modern ideas.
- SCIENCE, JUNIOR EXPERIMENTAL (Physics and Chemistry).** By W. M. HOOTON, M.A., M.Sc., F.I.C. Second Edition. 3s. 6d.  
"The explanations are clear, and we can recommend the work heartily."—SECONDARY EDUCATION.
- SOUND AND LIGHT, JUNIOR.** By JOHN SATTERLEY, D.Sc., M.A., 3s. 6d.  
"Reaches a high standard with plenty of practical work and exercises."—GUARDIAN.

### LANGUAGES, HISTORY, AND GEOGRAPHY.

- ENGLISH COURSE, PRELIMINARY (Grammar and Composition).** By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough High School. 2s.  
"An English Grammar embodying in general the recommendations of the Joint Committee on Grammatical Terminology. The author has kept in view the real aim of grammar, namely, 'the production of good English.'"—ATHENÆUM.
- ENGLISH COMPOSITION, JUNIOR.** By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 2s.  
"This excellent manual makes plain for the young pupil the essentials of good writing. A distinctly workmanlike production that can be heartily recommended as one of the best of its kind."—EDUCATION.
- ENGLISH GRAMMAR, JUNIOR.** With Parsing and Analysis. By A. M. WALMSLEY, M.A. Second Edition. 2s.  
"The work of a practical teacher who knows the value of compromise between the old and the new methods."—JOURNAL OF THE ASSISTANT MASTERS' ASSOCIATION.
- SPELLING AND PUNCTUATION (with Passages for Dictation).** By HARRY SHOOSMITH, M.A., Modern Language Master, Wandsworth Technical Institute Secondary School. Second Edition. 1s.  
"Very seldom have we seen any book which deals so thoroughly with the difficult subject of teaching and learning to spell."—EDUCATIONAL NEWS.
- FRENCH COURSE, PRELIMINARY.** By H. J. CHAYTOR, M.A., and H. E. TRUÉLOVE, B.A. Second Edition. 2s.  
"An excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method, and also to the necessity for thoroughness in the acquisition of the language."—ATHENÆUM.
- FRENCH COURSE, NEW JUNIOR.** By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 3s. 6d.  
"The book becomes a serious rival to those existing."—SCHOOLMASTER.
- FRENCH READER, NEW JUNIOR.** By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s. 9d.  
"Consists of well-chosen literary extracts in French."—EDUCATION.
- GEOGRAPHY, PRELIMINARY.** By E. G. HODGKISON, B.A. 2s.  
"An admirable textbook, clear, direct."—LITERARY WORLD.
- GEOGRAPHY, JUNIOR.** By G. C. FRY, M.Sc. 3s. 6d.  
"The matter is well arranged, the maps and diagrams are good, and the questions at the end of each chapter render the book a thoroughly practical aid."—SCHOOLMASTER.
- GEOGRAPHY OF ENGLAND AND WALES, A PRELIMINARY.** By ERNEST YOUNG, B.Sc., F.R.G.S., Head Master, County School, Harrow. 1s. 6d.  
"A capital book, written in simple language, and containing abundant sketch maps of the right kind."—LONDON TEACHER.
- HISTORY OF ENGLAND, PRELIMINARY.** By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, B.A., Cambridge Geography Diploma. With Illustrations. 2s. 9d.  
"In addition to an outline of political events it tries to give some idea of social and constitutional development, and also to connect history with geography. It is clearly written and well illustrated."—SCHOOL WORLD.
- HISTORY OF ENGLAND, SCHOOL.** By M. E. CARTER, Honorary School of Modern History, Oxford. 4s. 6d.  
"Very careful judgment has been exercised in the selection of the matter, and a proper perspective maintained."—EDUCATIONAL TIMES.
- LATIN COURSE, NEW JUNIOR.** By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 4s. 6d.  
"A very successful compromise between the old and the new methods—a combination of what is best in both."—JOURNAL OF THE ASSISTANT MASTERS' ASSOC.
- SHAKESPEARE, THE JUNIOR.** "As you Like It," "Macbeth," "Merchant of Venice," "Much Ado About Nothing," "Tempest." Each 1s. 9d.  
"To junior students taking up a detailed study of Shakespeare for the first time these editions will be invaluable."—SCHOOLMASTER.

## A REVIEW OF IDEAS AND METHODS.

Founded 1847.

New S. Vol. 1. No. 10.  
Old S. Vol. 71. No. 678.

OCTOBER, 1919.

Price Sixpence Net.  
By Post, Eightpence.

### THE TEACHERS REGISTRATION COUNCIL.

Representative of the Teaching Profession.  
Constituted by Order in Council  
29th Feb., 1912.

The Council maintains an Official Register of Teachers who have been accepted for admission under the Conditions of Registration.

The Register is open to qualified teachers in every branch, and until the end of 1920 experience under approved conditions is the sole qualification required. After that date the conditions will become more stringent.

Particulars and Forms of Application may be obtained from

THE SECRETARY,  
Teachers Registration Council,  
47, Bedford Square,  
London, W.C. 1.

### THE COLLEGE OF PRECEPTORS.

Incorporated by Royal Charter.  
BLOOMSBURY SQUARE, LONDON, W.C. 1.

#### LECTURES FOR TEACHERS.

A Course of Twelve Lectures on "Problems of the Practical Teacher," by Professor John Adams, began on Thursday, the 25th of September, at 6 p.m. The Syllabus may be obtained from the Secretary.

#### MEMBERS' MEETING.

A Meeting of Members and their friends will take place on Friday, the 24th of October, at 6 p.m.  
F. J. Gould, Esq., L.C.P., will give a Demonstration Lesson on Moral Instruction without Moralizing.

#### GENERAL MEETING.

The Half-yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, on Saturday, the 25th of October, 1919, at 3-30 p.m.

#### MEMBERSHIP.

Membership of the College is open, under certain conditions, to persons engaged in education.  
Particulars concerning the privileges of membership may be obtained from the Secretary.

**THIS ISSUE CONTAINS :**  
**Essays on Rousseau and English Education, The Drag on the Wheel, Self-Expression, and the Child's Daydream. Verse by "N. F.," News of the Month, and a Supplement on the Uplands Association Summer Meeting.**

### University Correspondence College.

(Founded in 1887.)

#### PRINCIPAL:

WILLIAM BRIGGS, LL.D., D.C.L.,  
M.A., B.Sc., F.C.S., F.R.A.S.

### LONDON UNIVERSITY DEGREES

(Graduates of British Universities and holders of certain diplomas can register as matriculated students of London University without passing the Matriculation Examinations).

### A SHORT GUIDE

TO

LONDON UNIVERSITY EXAMINATIONS,

Post free to PRIVATE STUDENTS from—

THE SECRETARY,  
No. 15, BURLINGTON HOUSE, CAMBRIDGE.

### THE ASSOCIATED BOARD

OF THE R.A.M. AND R.C.M.

FOR LOCAL EXAMINATIONS IN MUSIC.

Patron: HIS MAJESTY THE KING.

President: H.R.H. THE PRINCE OF WALES, K.G.

LOCAL CENTRE EXAMINATIONS (Syllabus A).  
Examinations in Theory held in March and November at all Centres. In Practical Subjects in March—April at all centres, and in the London District and certain Provincial Centres in November—December also. Entries for the November—December Examinations close Wednesday, October 15th (or, with extra fee, October 23rd).

#### SCHOOL EXAMINATIONS (Syllabus B).

Held throughout the British Isles three times a year, viz., October—November, March—April, and June—July. Entries for the October—November Examinations close Wednesday, October 8th (or, with extra fee, October 16th).

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 6d. per set, per year, post free.

The Board offers annually SIX EXHIBITIONS, tenable at the R.A.M. or R.C.M. for two or three years.

Syllabuses A and B for 1919 or for 1920, entry forms and any further information, will be sent post free on application to—

JAMES MUIR, Secretary,

14 and 15, Bedford Square, London, W.C.1

Telegrams: "Associa, London."

### THE INCORPORATED SOCIETY OF MUSICIANS.

Founded 1882. Incorporated 1892.

#### OBJECTS OF THE SOCIETY.

The objects for which the Society is established are the promotion of whatever may tend to the elevation of the status, and the improvement of the qualifications, of all Members of the Musical Profession, or may aid the musical education of the people.

#### ADVANTAGE OF MEMBERSHIP.

A Benevolent Fund for Members, the Regulations for which have purposely been made as wide as possible in order to meet the many and very varying contingencies which arise from time to time.

An Orphan Fund for the children of musicians, which is open to the dependents of all musicians, whether their parents were members of the Society or not.

Legal advice on all professional matters; Income Tax Claims; Copyright; The Recovery of Fees, &c.

Registers open to members of "Vacant Appointments" and "Engagements," and for the transfer from member to member of pupils moving to new districts.

#### LOCAL EXAMINATIONS IN MUSIC.

The examinations of the Society, established in 1884, are carefully arranged in a systematic series of Progressive Grades, embracing a complete course of musical study, and constitute a most valuable guide for Teachers in recording the progress of their pupil.

Full particulars may be obtained upon application to the GENERAL SECRETARY, 19, HENRIETTA STREET, W. 1

# NORMAL

Normal Corr. College.

(FOUNDED 1889.)

and 110, AVONDALE SQUARE, LONDON, S.E. 1.

## MRS. CURWEN'S PIANO- FORTE METHOD.

**ALSO EAR TRAINING & SIGHT SINGING  
FROM SOL-FA AND STAFF.**

New Training Classes for Music Teachers, held weekly, will begin September 24th and 27th at the Wignore Hall Studios, Wignore Street, W. 1, taught by Miss SCOTT GARDNER and Miss MARGARET KNAGGS, A.R.C.M. An interview may be had by appointment.

## JOINT SCHOLASTIC AGENCY, Ltd., 9, Brunswick Square, W.C. 1.

This Agency is under the direction of a Committee representing the following leading Educational Associations:—

**HEAD MASTERS' CONFERENCE.  
INCORPORATED ASSOCIATION OF HEAD MASTERS.  
COLLEGE OF PRECEPTORS.  
TEACHERS' GUILD.  
ASSOCIATION OF ASSISTANT MASTERS.**

REGISTRAR: MR. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

Interviews by appointment from 12 noon to 1-30 p.m., and from 3 p.m. to 5 p.m.; on Saturdays, from 11 a.m. to 12-30 p.m.

**A PROSPECTUS will be sent on application.**

## JOINT AGENCY FOR WOMEN TEACHERS OAKLEY HOUSE,

14, 16, and 18, BLOOMSBURY STREET, LONDON, W.C. 1.

Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools Association.

THIS AGENCY has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

No Registration Fees are charged to members of the above Associations, and their Commissions are reduced.

**Hours for Interviews:**

11-30 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11-30 a.m. to 1 p.m., and 2 to 3 p.m.

When possible, special appointments should be arranged.

REGISTRAR: MISS ALICE M. FOUNTAIN.

# EDUCATIONAL WORKS.

## A SHORT HISTORY OF THE GREAT WORLD WAR.

By F. MAYNARD BRIDGE.

Frontispiece by HENRY J. FORD.

Coloured Jacket and Frontispiece. 272 pp., demy 8vo, 6s. net.

**Some  
Opinions.**

**Globe.**—We direct the attention of all who are looking out for a Class Book to "A Short History of the Great World War." It has just the right manner of smooth and attractive narrative which is needed for the concise presentation of a very wide subject."

**Glasgow Herald.**—A very clear and concise summary. The excellent arrangement and the good index make the book useful for reference, but it is also readable as a whole.

**Athenæum.**—Concise; clearly arranged.

**Observer.**—A very useful and convenient summary.

**Evening News.**—I recommend very cordially Mr. Bridge's History. . . . It has all the vital things in it; it tells the whole story clearly, briefly and well.

**Scotsman.**—A well-proportioned, well-digested narrative of events.

*Please write fully:* 209, Castle Boulevard, NOTTINGHAM.

*It needs no shake*

**See Why?** The nib rising from the ink barrel is always wet. No dried matter encrusts and clogs it.

*Not a splutter in a penful*

**IT'S ALL-BRITISH.**

*It needs no filler*

**See Why?** Its extra large ink barrel presents a mechanism-free opening into which ink can be poured easily from a bottle

*Not a spill in a fill*

**You have probably tried many Pens which have tried you. Why not end your trials and buy a "Whytwarth"?**

*"The pen with the disappearing nib"* has none of the drawbacks that make you suspicious of ordinary fountain pens. Science and brain have in it produced the perfect writing instrument. The ink *cannot* leak or evaporate, it is locked in the pen. The nib is *always* wet and ready to write. The ink-barrel is easy to the hand, holds a lot of ink, and can be filled easily without a filler.

**JOHN Whytwarth**  
*Scientific Unleakable*

**"The Pen with the Disappearing Nib."**

**ENTIRELY BRITISH.**

*Of all Stationers.*

**JOHN WHYTWARTH LD.,**  
14, Ivy Lane, Paternoster Row,  
LONDON, E.C. 4.

From  
10/6 to  
£2 . 2 . 0

*Its nib must suit you*

**See Why?** The 14-carat gold nib is supplied exactly, not merely "near enough," to the pattern of your favourite steel nib.

*Not a scratch in a screed*

*It cannot leak*

**See Why?** The ink is "locked" however the Pen is carried. "Locked" ink will not evaporate either, whatever the climate.

*Not a grumble in a year.*

**THE GREAT GAS SAVER.**

THE ECONOMIC ONE-RING

GAS COOKER WITH HOT WATER

ENSURES SUPPLY OF HOT WATER FOR DISHES, BATH, &c.

15-GALLON CYLINDER

Will positively REDUCE Your Gas Consumption apart from its enhanced service.

BAKES, BOILS, ROASTS, GRILLS, and TOASTS to PERFECTION, and supplies Hot Water for the Bath and other Domestic requirements simultaneously, with a gas consumption of 35 feet per hour = an average cost of 2d.

Demonstrations Daily. Full particulars on application to Dept. 41.

THE NEW TEACHING SERIES IS ONE OF THE FIRST-FRUITS OF THE NEW RENAISSANCE, AND BREATHES THE INSPIRATION OF THE HOUR'S OCCASION. IT STRIVES TO BUILD UP THE NEW HUMANISM ON THE BASIS OF THE STUDENT'S IMMEDIATE ECONOMIC INTERESTS AND ENVIRONMENT

Mr. H. G. WELLS writes :

"The Series will be a very valuable addition to our educational resources. The scheme is an excellent one."

## CHEMISTRY FROM THE INDUSTRIAL STANDPOINT.

By P. C. L. THORNE, B.A.

Uses suitable descriptions of chemical operations on a large scale to illustrate general principles and the rough physics of applied chemistry, thus creating a school chemistry closely related to the practical applications of the science. With specially prepared diagrams.

4/6 net. EARLY IN OCTOBER.

## THE FOUNDATIONS OF ENGINEERING.

By W. H. SPIKES, B.A.

The mechanics and heat which constitute the general principles of the science of Engineering are treated with a rare simplicity.

With many new diagrams.

4/6 net. EARLY IN OCTOBER.

## THE NATURAL WEALTH OF BRITAIN.

By S. J. DULY, B.A.

Practical Field Geology, and the implications of Geology in Mining and Industry, form the prelude to a detailed treatment of Industrial Geography.

With about 100 illustrations.

6/- net. NOVEMBER.

Professor JOHN ADAMS :

"Your Series EXACTLY meets the needs of the Educational situation just developing."

## APPLIED BOTANY.

By G. S. M. ELLIS, B.A.

The secrets of plant life, the influence of environment and of man, and the control by man of environment to the advantage of the plant—these are the substance of the volume.

With many illustrations.

4/6 net. EARLY IN OCTOBER.

## CITIZENSHIP.

By F. R. WORTS, M.A.

A search for the roots of Government, both Central and Local, necessarily results in a thorough examination of the problems involved in the rights and duties of citizenship.

4/6 net. EARLY IN OCTOBER.

## MATHEMATICS OF BUSINESS AND COMMERCE.

By O. H. COCKS and E. P. GLOVER.

An important feature is that instruction in book-keeping is implicit, the manipulation of figures being always applied to actual book-keeping problems as well as being of the most practical and serviceable character.

With Answers. 4/6 net. NOVEMBER.

Write for detailed list of works in active preparation

## SPECIAL NOTICE.

The November number of *The Educational Times* will be issued at the end of October. It will contain articles on Scholarships, on Training Colleges, and on the School Piano. With the December number there will be a special Art Supplement in the form of a print of an etching by Mr. Fred. Richards. Contributors and advertisers are asked to note that matter intended for publication should be sent in not later than the 20th of the month.

## BUSINESS NOTICE.

THE EDUCATIONAL TIMES is issued Monthly.

Price Sixpence net. By post Eightpence.

Subscription for one year, including postage, Seven Shillings.

Subscription for three years, including postage, One Pound.

Articles submitted should be sent with a stamped addressed envelope for return. They should not exceed 700, 1,400, or 2,000 words in length, according to the importance of the topic, and should be marked by freshness of view.

Letters to the Editor and Books for Review should be addressed to—

THE EDITOR, THE EDUCATIONAL TIMES,  
31, Museum Street, London, W.C. 1.

## ADVERTISEMENT RATES :

27, Southampton Street, Strand, London, W.C.2.

## NOTES AND COMMENTS.

### The British Association.

The Educational Science Section of the British Association was formed some few years ago. Since the Association itself exists "for the Advancement of Science" we might justly suppose that those of its members who founded the new Section L were desirous of promoting the advance of educational science. After reading the reports of this year's proceedings at Bournemouth one is driven to doubt whether, in forming the section, the Association as a body had any clear notion as to the meaning of the term "educational science." For the most part the meetings seem to have taken a form which is all too familiar at educational conferences. There were many speeches and much airing of opinion, all interesting, and in the view of the speakers probably very important. But we should distinguish between opinions and knowledge. It is said that every man has the right to his own opinion, and in the days when D.O.R.A. was unknown the right was generally acknowledged and extended to the point of freedom not only to hold opinions but also to express them. The scientist, speaking as a scientist on any topic, is expected to do more than express opinions. We look to him for ideas, conclusions, and hypotheses, based, not merely on his general impression of things, but on careful investigation which he must be ready to describe and on ascertained facts which he must place before us in support of his views.

### The Science of Education.

The greatest service which the British Association can perform for education is to extend the practice of conducting special enquiries. The report, published some years ago, on the size of type used in school text-books has had excellent results. This year a report was presented on the free-place system in secondary schools. It was not unanimous nor was it in the strict sense the result of a scientific investigation. Apparently it was based on the opinions of schoolmasters and others, and in turn its conclusions were nothing more than opinions. More fruitful lines of enquiry should be sought, and the co-operation of the Psychological Section should be invited, since it is impossible to build up any true science of education without an extended study of the mind and body of the child. It is possible to suggest points on which enlightenment is needed. For example, we ought to know more exactly than at present the function of a teacher in a modern community. Is he engaged only to impart knowledge which the parent is too busy or too ignorant to impart, or is he, as some suggest, a blend of parent, instructor, doctor, and clergyman? As to the knowledge he seeks to impart, is the old suggestion true, as repeated by one writer only last week, that the best way to learn how to write English prose is to practise writing Latin verse, or more generally that the best way of learning to do anything is to learn to do something else? A vast field of research would be opened out by an attempt to discover precisely why we teach any given subject in the school course.

### The Montessori Visit.

It would be no less interesting than timely if our educational scientists would set themselves to find out whether a system or method of teaching, originally devised for backward or defective children in Italy, is applicable to normal children in England. Many people appear to think that it is, but nobody seems to know. Willing disciples are attending a course of lectures delivered by Dr. Montessori in London with the aid of an interpreter. The President of the Board of Education is to take the chair at a complimentary dinner, for which tickets may be obtained for £1 5s. (with mineral waters) or £1 15s. (with wine). From these charges it would appear that the food at the banquet falls into the category of "didactic material" such as the Montessori method demands. With the help of a skilful impresario the lectures are assured of success, but we cannot pretend any satisfaction in this commercial result or in the prospect of the Montessori method becoming fashionable. Whatever may be its merits, and they are doubtless many, they should be placed freely at the disposal of teachers. Any attempt to develop a new cult should be resisted by all who care for the good name of the teaching profession. The truth is that in education we can have no place for patent medicines, even if they are said to be worth a guinea a dose.

### Salary Problems.

The Standing Committee on Salaries is now fairly started under the leadership of Lord Burnham. From the record sent by our Primary School Correspondent it is clear that its proceedings will be watched with a jealous eye by the teachers concerned, some of whom appear to feel very keenly the loss of their power to strike. It should be remembered, however, that this power has always depended on the Board's willingness to maintain its prescribed standards of qualification for teachers. No strike of teachers can succeed if the Board is willing to replace qualified teachers by unqualified persons. Public opinion would probably withhold support from any such action on the Board's part unless feeling ran strongly against the teachers who were on strike, but in the last resort teachers can be replaced by amateurs and their position is thus weaker than that of engineers or railwaymen. The Salaries Committee will find its task a difficult one and it is to be hoped that teachers will not render it more difficult by premature agitations. Probably it will be found necessary to take note of salaries paid to teachers working in evening schools. At Rochdale classes were suspended owing to a dispute as to salaries. In 1916 the payment to the teachers was 6s. for a lesson of two hours. In 1917 it was increased to 7s., and in 1918 to 8s. 6d. This year the teachers ask for 10s. 6d., and as they were unanimous a strike resulted and the evening schools could not be started.

### The Late Mr. George Sharples.

The death of Mr. George Sharples, which occurred in Manchester on August 27th, involves a grievous loss to the teachers of the country. An ex-President of the National Union of Teachers, Mr. Sharples was untiring in his efforts to improve the status and conditions of school work. These efforts were in no way restricted to the interests of teachers in elementary schools, but were extended to the whole field of education, for Mr. Sharples was a zealous advocate of the unification of the teaching profession. He served on the first Registration Council throughout its existence, and with the formation of the present Council he was at once appointed as a representative of the National Union of Teachers, and on the Council he acted as Chairman of the Elementary School Teachers' Group, establishing the most friendly understanding with his fellow-members and invariably seeking to find common ground with those engaged in other forms of teaching work. He was a member of the Lancashire County Education Committee, of the Whitley Council for Education in Manchester, and of the Consultative Committee of the Board of Education. For thirty years he had been Headmaster of Waterloo Road School, Manchester, with 1,100 pupils. Before taking this post he had been Headmaster of the Spring Grove School, Huddersfield, where one of his assistant masters was Mr. T. J. Macnamara, now Parliamentary Secretary to the Admiralty. In his early days Mr. Sharples was a notable athlete and acted as captain of the Bolton Wanderers Football Club. He maintained his interest in games and was one of the founders of the Manchester Schools Athletic Association.

### Bela Kun—Educationist.

The now deposed despot of Hungary introduced some notable changes in the schools of Budapest. Under his rule fairy-tales became a regular part of the school curriculum, and "fairy-tale afternoons" were arranged, with excursions into the country. These were provided not only for the ordinary schools, but also for children's hospitals, orphanages, and convalescent homes. More remarkable still is the arrangement by which in the rates of State pay a village schoolmistress received one-third more in salary than a Cabinet Minister, including Bela Kun himself.

### OUR LADY OF DREAMS.

O'er lunar craters is her shadow cast,  
Her still feet tread adown the silent night,  
Sweetest! Her whisper thrills the listening grass  
And steeps Life's dusty limbs in waters of delight.

Subtly she stealeth thro' the unquiet earth,  
(Blind lovely mother of a sightless race  
Shipwrecked in space.) Sweet with her breath  
Linger the hearts where seeks she dwelling-place.

And little seeds—strange buds and flowers of flame,  
Blown from her lips and fingers down the ways,  
Falling on prince or peasant weave a chain,  
Binding his passioned moment unto her endless days.

N. F.

## THE INFLUENCE OF ROUSSEAU ON ENGLISH EDUCATION.

THIRTY years ago, when books on educational theory appeared at rare intervals, students of education were nourished on Quick's "Educational Reformers." We remember the series, Raticius, Comenius, Locke, and so on, ending with Herbert Spencer. We unconsciously absorbed the idea that progress in education went by a series of spurts, each spurt prompted by a reformer. In the rough and tumble of our experience in schools, it must often have occurred to some of us to wonder where and how the influence of these great men could now be traced, and horrid doubt must have assailed us at times whether the "reforms" they advocated ever came to maturity. Professor Withers once remarked that he feared, if the claims of Quick's heroes to an immortality based on the permanent service they rendered to mankind were impartially but rigorously examined, some of the names of highest repute would disappear. Which, in fact, would survive? What is the permanent contribution of Locke? Were Spencer's criticisms instrumental in removing the abuses he condemns? The growth and transmission of vital ideas in science is tolerably easy to follow; but in education, can an idea so prevalent at the present day as "freedom," for example, be really tracked back to Rousseau, or is it a fresh shoot arising in new conditions?

These and similar questions are suggested by reading a book published this year in Paris, by M. Jacques Pons, who through the tumult of the war, was permitted by the French Government peacefully to study and to prepare an educational thesis. The book is "L'éducation en Angleterre entre 1750 et 1800." It is described in a sub-title as an "aperçu sur l'influence pédagogique de J. J. Rousseau en Angleterre."

At first sight the period from 1750-1800 would not seem to be a promising field of investigation for someone in search of evidence of educational progress, whether in thought or in action. The universities and public schools were almost at the lowest point in their history, and they were little better at the end of the period than at the beginning. The children of the middle classes went to private academies, concerning which literature at any rate has little to say that is good. The old grammar schools, save here and there, were in decay. The children of the "labouring classes," if they were educated at all, were taught in charity schools or dame schools. Dr. Johnson would appear to express what is called the robust common sense of his day when he said: "I hate by-roads in education. Education is as well known, and has long been as well known, as ever it can be."

The Doctor himself, in his reference to by-roads, is an indirect witness to the fact that some people were ready to desert the old main thoroughfares. M. Pons in his book reveals the fact that the movement was much greater and even much more consonant with later ideas than the average reader of educational literature would suppose. He does not set out and prove that prophets arose in his period whose message has been neglected by succeeding generations; but he shows with great clearness that there existed an extraordinary activity of educational thought, translated in some

directions into action. The excellent bibliography appended to the book, which is a list of books published principally between 1750 and 1800, is in itself a piece of striking evidence that people were genuinely interested in the way in which children should be brought up.

The aim of the author is to trace the spread of educational ideas through the numerous books, papers, reviews, and tracts, to describe the controversies that arose, and to illustrate by examples the attempts, usually interesting, often bizarre, to carry out the new ideas into practice. As the sub-title indicates, it is the influence of Rousseau that he wishes especially to explore. M. Pons is no blind worshipper of Rousseau, eager to see everywhere indications of his power. On the contrary, he gives the fullest value to those less palpable but more powerful influences vaguely to be called social. With great sobriety of judgment he points out that the writings of Rousseau constitute only one of the factors which favoured educational unrest, and he specially singles out the religious movement out of which Methodism arose and the growth of sentimentalism as forces disturbing the calm surface of XVIII century self-complacency, and gives due weight to the economic revolution and the infiltration of "idées égalitaires" in fomenting the disturbance. But it was Rousseau who in this sphere, as in a wider one, "set the world aflame."

The same intellectual intercourse between England and France which contributed so much to spread English ideas of political liberty in France during the earlier part of the XVIII century brought Rousseau's *Emile* at once into public notice in England. It was eagerly welcomed and warmly attacked. As M. Pons says, "c'était un livre qui, dans un siècle frivole, adorateur des sciences exactes et de l'esprit, proclamait le retour à la nature, le droit de l'enfant au bonheur, la suprématie du cœur et des sentiments sur les froides sciences. Au-dessus de tout, la liberté . . . était réclamée pour l'enfant." The very fact that Rousseau's doctrine had so many faces and was not a logical system prevented the formation of a school of thought. Enthusiasts siezed upon one or other of the aspects in which the message was presented. Some were little more than sentimentalists, others were prompted, like the Edgeworths, to throw off the domination of words and to make a genuine step forward in teaching the child to study things. Others interpreted a return to nature too freely, and in the writings of some one can see foreshadowed some of the extreme claims for the freedom of the child which are heard to-day. But there grew out of it all no organised body of thought, however mistaken. Out of the number of writers, some of educational eminence, like the Edgeworths and Thomas Day, whose views and proposals are succinctly and clearly described by M. Pons, very few have left any permanent impression, and in their own day very few had even personal followers. The whole of the discussion is a welter of personal opinions, sometimes sensible, sometimes extreme, which did not really penetrate into the greater world of thought. To tell the plain truth, even in spite of their occasional eccentricities, they are for the most part dull, and we may be grateful to M. Pons for so skilfully giving us all we need or care to know about them. The Edgeworths stand out among the rest as exceptions, and there is an attractive Welshman—David Williams.

As the writings of these eager reformers were miscellaneous and partial, so were the experiments in carrying out Rousseau's ideas. The schools, so far as the evidence goes, were hardly touched at all. It was the private pupil who was brought up on one or other of the new plans, the boys and girls in well-to-do houses, deliberately kept from the public schools, because one of the controversies of the period ranged round them. So a successful experiment ended with itself, and the sad truth is that few of the enthusiasts were so sure of their ground as to persevere through the whole of a child's life. As in so many instances, the child upon whom the experiment was tried does not often perpetuate it when he comes to have a family of his own.

A historian of past education is always at a disadvantage because he cannot personally visit the schools to see how far ideas which are accepted in current discussion are being realised in practice. There is curiously little evidence of the actual day to day procedure in schools of any past generation, and even nowadays descriptions of school life are often *ex-parte*. So M. Pons, who is fully aware that educational controversies may take place in the clouds without a ripple in the sea beneath, falls back on school books to show how the influence of Rousseau worked out in practice. Two long and diverting chapters are devoted to the "livres scolaires" and to "la littérature enfantine." The actual reading books, "les manuels de l'écolier," do certainly improve, and books written for children were a discovery of the XVIII century. On the credit side both types of literature can claim that they are simpler than their predecessors, more "amusing" in the XVIII century sense of the term, and that they concern themselves with events and objects which are likely to attract children and are not limited to the dreary side of the Scriptures. A more sophisticated race would find them insipid, no doubt, but they marked a great step in advance. Yet there is a heavy count against them, especially towards the end of the century. They became intolerably "moral." As M. Pons pessimistically remarks: "le conte moral et scientifique est la forme grossière sous laquelle les idées pédagogiques de l'école nouvelle atteignèrent l'enfant et le public. Etudier le cœur et l'esprit de l'élève, faire de l'éducation une science expérimentale, ces principes fondamentaux de l'école de Rousseau ne furent que rarement suivis par les auteurs des contes moraux. . . . Cette ignorance des aptitudes et des pouvoirs de l'enfance conduit les écrivains à présenter toutes sortes de connaissances, le conte moral devient une petite encyclopédie." It was this kind of book, issued in the name of the new education, which provoked the criticism of Wordsworth, Lamb, and Coleridge, and which together with the "zèle intempestif des maladroits partisans" in other directions brought the teaching of Rousseau into bad repute.

There were other reasons also. The wave of religious and humanitarian feeling which did so much for slavery, for prisons, and for Christian Missions, did not really cover education. For very few contemplated the real education of the mass of the people. The public schools were too securely entrenched in the classical traditions to be moved. The children of the middle classes were not taught in a well-defined type of school, with a clear aim; the "academy" copied the public school in a feebler way, and usually with inferior men as teachers.

Even some of the most enlightened philanthropists doubted whether the children of the poor should be instructed at all beyond the stage of spelling painfully through the Bible. The good people who argued over the end of education and who wrote children's books had in view the home-bred child of the comfortable and respectable classes, and when the influence of Rousseau and his followers was spent in that sphere, it was spent entirely. One has only to consider what kind of teaching was offered to the children of the labouring classes in the British and National schools, instituted early in the new century with a flourish of distinguished patronage, to realise how small a distance the reforms advocated by Rousseau and his followers had really penetrated. When Pestalozzi was presented with an account of the Lancasterian system, he replied that he could make little use of it, as he had in view education and not instruction merely. He placed his finger accurately on the weakness of the English attitude towards education. The crusade of Rousseau began with a desire to educate; but in England it ended with instruction.

The question suggested at the beginning is not answered. Was Rousseau an "educational reformer" to whom we owe permanent elements in our own education? So far as the XVIII century and a large part of the XIX, probably not. And yet, once he had preached the return to nature and claimed some sort of freedom for the child, once he had drawn attention in fiery words to the necessity of thinking what a child is before you try to train him, the ideas do not evaporate and disappear. They are always behind men's thoughts, and they persist, to spring to life in disciples of a later age, when social conditions offer a more congenial atmosphere. Doubtless we owe more to Rousseau now than we should be willing to allow.

We hope M. Pons will continue his study of English education. The sterile years that follow his period will not afford him much satisfaction, but he could render a real service to the history of education by tracing the slow penetration of the ideas of Pestalozzi and of Froebel. They came in more quietly and with less attention from reviews and from the writers of books; but they had a larger field, that of popular education, in which to spread. No one, we think, has explored this particular piece of history. If M. Pons could do it, he would be more fortunate in his chosen period because he could see with his own eyes how much or how little of the influence of these two reformers can be observed in the schools of to-day.

#### "A Challenge."

Of the many interesting careers cut short by the war, that of Lieut.-Col. John Hay Maitland Hardyman, stands out as one of the most remarkable. He was born in Bath in 1894, went to Fettes College, and subsequently took his Arts course at Edinburgh University. He enlisted in the 4th Somerset Light Infantry in 1914. He coupled a brilliant military career with a keen interest in political affairs, and by 1918 he was not only the youngest Lieut.-Colonel in the Army but had been elected to the Council of the Union of Democratic Control. By that time he had already been awarded the Military Cross, to which the D.S.O. was subsequently added. He was killed in action in August, 1918, just before the close of the war. A volume of his poems, with a brief biographical foreword, is to be published almost immediately by Messrs. George Allen and Unwin, Ltd., under the title *A CHALLENGE*.

## THE DRAG ON THE WHEEL.

BY C. W. P. ROGERS.

It would be interesting, and probably amusing, to study the replies if this question were circularized among the teaching profession: "What do you consider to be the greatest hindrance to the cause of Secondary Education in this country?" Undoubtedly local authorities would be very roughly handled. Probably headmasters, too, would not escape. Conditions of service, inadequate salaries, public apathy, diversity and multiplicity of examinations: all these would gain their share of voters. But I wonder how many would mention the low educational level of the mass of the profession. Not academic, be it noted, but educational.

Most of us may have had more than enough of "The Loom of Youth." Yet there is one passage that is worth quoting here. "There they were, the teachers of youth, most of whom had never at any time penetrated to the heart of anything. They were automata—machines for repeating the same old platitudes." We all know them, with no spark of fire, no scrapping of ancient shibboleths, no spiritual revival, no looking at life from a new angle, more and more myopic with the passing of time. With the same books, the same syllabus, the same lessons, the same comments, the same jokes, the same aloofness from the vivid boyish life growing more restive day by day, their class-rooms are veritable valleys of dry bones upon which the breath of life never blows.

No Education Committees, no Boards of Governors, no inadequacy of reward, could stay the flow of vital energy if schoolmasters were all they should be. That they are not is not necessarily their fault. It is that they are not equipped by Nature for the work.

It will, of course, be contended (and to some extent legitimately) that the conditions make the men, and that while the conditions are bad you cannot expect a good class of men to carry on the work. "Make the former satisfactory," it is said, "and you will get the right kind of men." That is all very well, and if those who agitate for large salaries and pensions and the rest would admit the logical implication involved in this statement, it would be culpable on the part of the authorities to hesitate for a single moment. The retort is this, as I see it: "You want to raise the status of the profession by highly increased salaries and sounder conditions of service. But a vast number of you aren't worth anything like what you suggest. Yet we too are anxious to improve the status. Now we recognise the vicious circle in which we are involved. Seeing, then, that we are in fundamental agreement with you, may we take it that you will consent to our retaining only those who are worth the money and filling the many vacant places this will create with the better men who will be attracted?"

Unfortunately, I cannot believe that the movers and supporters of these agitations would consent for a moment. For, as a matter of fact, these movements are not in reality designed with the object of casting off the dead-weight which cumpers the educational profession. Let it be understood that I do not refer to those high-minded educationists who have laboured for the establishment of the Teachers Registration

Council. It would not be unfair, I think, to say that in the majority of cases where the argument as to attracting better men is used the speaker does not greatly mind whether that happens or not. It may be an accidental consequence: but it is not his basic idea. No! the purpose—I speak quite generally—is to provide for those who are already in the profession, to furnish good means of support to all, simply because they happen to be schoolmasters, and not because of their intrinsic worth. It is a curious inversion: to pay for the office and not for the man who fills it. Think of every secondary schoolmaster rising automatically to £600 per annum (plus a pension), which is one of the schemes seriously proposed. That he ought to be worth it I quite agree. That anyone who fills the position as it should be filled is worth it is certain. That there are many who are worth it is undoubted. That, given a clear field, the positions could all be filled by men worth it is possible. But to suggest that every schoolmaster is worth it is ridiculous. The good suffer for the bad. But why should the bad be rewarded beyond their deserts because they ought to be good?

We are, indeed, in great danger lest those outside our body should think of us simply as a huge Trade Union whose sole purpose is to gain what we can and give as little as we need. For another thing that astonishes me so much about the average assistant master is that he seems so anxious to limit his hours of labour. Very ordinary, you say. Quite so. But I think that schoolmasters should not be ordinary men. For my part, there are few things I deplore more than the officially sanctioned proposal that no master should do more than 18 hours school work in a week. I have heard it maintained that that is as much as a man ought to do. Frankly, I think such a suggestion verges on the impudent. And when the speaker went on (amid approval, if you please) to say that no man could do more than that and retain his efficiency, I felt positively insulted. If ever I stagger back from my work and sink exhausted on to my couch because I have had to put in more than three hours during the day, I shall know that my pension is long overdue.

I have further heard it seriously urged that only with this weekly output will it be possible for schoolmasters to take their proper place and to do their proper share in the conduct of public and local affairs. Fancy telling a prominent business man, who in addition to controlling his private concerns has his duties as Town or County Councillor, Alderman, or Magistrate, his Watch Committees, his Education Committees, and a host of other public functions, that we simply long to take a part in the affairs of the town, but that he will realise how impossible it is when he understands that we have to work more than three hours a day!

No! It will not do. Not in these ways shall we gain the esteem and confidence of the public. There are others, which at another time it may be worth our while to consider. That unconditional respect is far from being won, and we who are inside may see more clearly than those without the causes which will make it long in the winning. Onlookers may see more of the game, but we who are in the thick of it may realise more surely who is shirking, who is letting the side down, and who is sinking himself and going "all out."

## SELF - EXPRESSION.

By ELSIE A. FIELDER.

SELF-EXPRESSION is essential to happiness and health. We experience great satisfaction in delivering a lecture or writing a thought which has become part of us. All creative work gives real joy to the worker. In contrast, witness the peevishness of men and women who have to do a daily grind at some uncongenial occupation and whose leisure is so short that they cannot be expected to employ it really well—for indeed some small amount of our store of energy must be held in reserve for our leisure hours. Generally speaking, it is in our so-called leisure time that we do the work which is to leave our individual mark on the world's big face.

Consider the case of the bank clerk. His hobby may be painting, writing, gardening: in one of these he finds great joy. He cannot earn his living by it, he may feel, but he uses his leisure in its service.

There are, of course, men and women who live out through their work, many professional people and so forth, but these are in the minority. They are lucky individuals. They should be, and often are, happy folk and delightful to know.

Most thinking people have agreed lately that our British "workpeople" must have longer leisure. On the level with the spread of the eight hours day system we hear of schemes for many more adult evening classes, technical and otherwise. We rather fear these people may use their leisure in undesirable ways. Besides, some of them, we know, are themselves eager for "further education." The Workers' Educational Association is doing excellent work here in England. It brings together all adults who are willing to study, and, in order to help those whose early education has been scanty, the secretaries, or sometimes the members, by voting, arrange to have classes for arithmetic, composition, geography, as well as study circles and lectures dealing with subjects interesting to more cultured people—e.g., Economic History. Why do we almost rush to give these opportunities for culture? Is it not because we know that so few of our workers have hobbies, so few know how to express themselves? We are beginning to remember they have got selves. So we do our best. We have technical classes, lectures, clubs.

In my teaching life, however, I come across critics—many of them parents—who ask: "Why so many hours on your time tables for drawing, painting, modelling, woodwork, and the like—all that you teachers call 'self-expression' work?" Well, I have answered the query, though perhaps rather scantily. I will just add that *the health of the individual is dependent upon the happiness that comes from self-expression*, though the immediate effects of expressing one's self may be tiring.

Our aim as educators is that development may be harmonious. Looking around, we find a multitude of examples of the opposite thing—poor, half-suppressed individualities. There is no need to push my point farther. You see I, too, have "got something off my chest," and I feel sublimely happy.

## THE CHILD AND HIS DAYDREAM.

By G.H.G.

POPULAR opinion and the schoolmaster's own imagination fondly regard him as the "guide of youth." But long before the majority of pupils reach him they have already found a guide upon which they rely, in great measure unknown to themselves, much more than they can ever do upon the schoolmaster.

This guide is the matter of the daydream.

The child discovers, so soon as he is able to notice things at all and to think so far as his limited powers allow him, that he is a member of a little world, composed of beings entirely superior to himself; of people who are greater in point of size, and in their ability to do things that he is as yet unable to do. He finds, too, that this world is on the whole very complaisant, and that its members are ready to serve him in various ways. They will carry him when he is tired or unable to walk, they will assist him and play with him, feed him, and in many other ways will permit his wishes to dominate them. Their complaisance is, however, variable: and the child discovers that he has at his command various means of compelling their attention, of diverting their interest from their own recreation or business and concentrating it upon himself.

These things are true of the normal child, and even more markedly true in the case of the child who suffers from some congenital organic or mental defect. In either case it is certain that at an early age the child has arrived at an estimate of this world, and of the means by which he may secure from it the gratification of his many wishes. Further, he has also formulated the nature of the role he desires to play in such a world.

It need hardly be said, in the case of a being utterly selfish and egotistic, as the child invariably is, that the role is that of principal, of leader, of king. The other persons are conceived as existing entirely for his service.

Adler believes that this definite formulation of role and means to domination is accomplished completely before the child has attained three years of age. If this be true, and the evidence in favour is very great and convincing, it means that long before the pupil comes to the schoolmaster for "guidance," his mind is made up as to his own relations in the world in which he is to live; that he has already an habitual outlook. To "cure" him of it will not be an easy task, since it is not generally recognised as existing; to imprint another building of ethical sort upon it is hardly wise or satisfactory, since such construction generally proceeds in ignorance, wilful or unconscious, of the foundations upon which the superstructure is to stand, or over which it will collapse.

This early formulation of the child's means to domination finds its expression in the daydream. You may, in the class-room, see children dreaming before your eyes. It is not always because your lesson does not interest—it is often because it interests so much. Some chance word, some vivid bit of your teaching that the child has visualised, has called up an association, an integral part of the habitual daydream, and its thoughts have wandered away along the easy customary road.

So much is common knowledge. Every writer about children has recognised that they sit in school and think

of the fields, of the river, of the seaside, of the many things alien to the business in hand. But comparatively few have realised that the subject of the daydream is not so much the river as the child himself in or by the river, amongst his companions, fulfilling the role that he has marked out as definitely his own; excelling as he conceives he should excel.

It is not very easy to discover the exact nature of these individual dreams. Their possessors guard them carefully, as Samson the secret of his strength. It is however possible sometimes to obtain a child's confidence in this respect. A flood of illumination is thrown upon his character; and many things, formerly obscure or hidden, stand out in clear detail and in proper relation.

There comes into mind, as illustration, the case of a boy, who has now left school and who will shortly be proceeding to the University to study engineering. He has been with the army about a year. He was, as an infant, small and delicate.

His daydream has always pictured himself as an engineer, or as an authority on natural history. Not an engineer who drives engines, but as one who knows all about them, and who can put things right when other people fail, or whom other people must consult when their own information is inadequate. As a naturalist he wished to stand to other people as his father stood to him, possessing an enormous store of knowledge which enabled him to impress others. The fact that the father is an engineer and an enthusiastic amateur naturalist has naturally influenced the choice of role, but that, out of all possible relations between himself and his world, this boy should have chosen the particular relation of indispensable adviser, consultant, and director, is significant; arising out of his estimate of his small stature and his weakness, and as compensating to both.

Recently he dreamed that he was back at the station in England where he served with the army. Something had gone wrong with the electrical plant. After everybody had tried and failed, he was sent for; and under the eyes of the other men of his company, he succeeded very quickly. He experienced very great pleasure, following on his success.

There were other elements in the dream, significant for the dreamer, but irrelevant to the purpose of this paper. What is important is the persistence of the infantile role, which has remained unaltered by all the influences since brought to bear.

It is not suggested that the child's daydream represents something undesirable; something that the educator should aim at repressing. It is something, on the other hand, of whose nature and existence we should be aware, and which we should use as much as possible to secure and further his work. In the example cited, great ethical possibilities present themselves so soon as the exact nature of the dominating wish is understood. The role is commendable, and the educator can do much by stimulating the boy towards its accomplishment, assuring him, however, that it can only be sustained by one worthy of it. There appears to be no stimulus at once so effective in securing sustained interest and continued endeavours in and for lofty achievement as the appeal to an abiding individual ideal, such as the daydream expresses. And the educator who ignores it or tries to overthrow it is indeed "kicking against the pricks."

## CHRONICLE OF EDUCATION.

- 1 Sept.—Publication of Minimum Scale of Salaries by the Scottish Education Department.
- 9 Sept.—Meeting of the British Association at Bournemouth. Sir Napier Shaw, President of the Educational Science Section, delivered an address on "Educational Ideas and the Ancient Universities." Mr. Douglas Berridge submitted a report on the effects of the "free-place" system on secondary education. Paper by Sir Arthur Quiller Couch on the "Teaching of English," read by the Recorder of the Section.
- 12 Sept.—First meeting of the Standing Joint Committee on Salaries, at 10-30, at the offices of the Board of Education, Viscount Burnham in the chair. Mr. F. J. Leslie and Sir James Yoxall were appointed joint hon. secretaries of the committee. Discussion on procedure.
- 16 Sept.—Annual Meeting of the Library Association of Great Britain at Southport. Welcome by the Mayor. Address by the President, Mr. G. F. Barwick.
- 16, 17, 18 Sept.—James Watts Centenary Celebrations at Birmingham. The Lord Mayor presided over a meeting at which Professor F. W. Burstall gave an address dealing with the rise of engineering manufacture.

## COMING EVENTS.

- 2 Oct.—Inaugural meeting of Evening Geography School at University College, London, at 5.
- 7 Oct.—Commencement of the Gresham Lectures at Gresham College, Basinghall Street, at 6.
- 14 Oct.—Visit of Mr. Lloyd George to Sheffield. The Prime Minister will receive an honorary degree from Sheffield University.
- 17 Oct.—Meeting in London of the National Council for Domestic Studies.

### Some Appointments.

Miss Hilda Richardson, Staff Lecturer at the Royal Holloway College, to be Classical Lecturer at the Newnham College.

Mr. T. Stuart, M.A., D.Sc., Professor in Mathematics at Hong-Kong, to be Lecturer in Mathematics at Loughborough Technical College.

Dr. E. A. Baker, to be Director of the School of Librarianship at University College, London.

Mr. G. A. Taylor, Chief Inspector under the Board of Education for Nottinghamshire, to be Chief Inspector for Kent.

Mr. W. W. Mayne, M.A., B.Sc., to be Organiser of Higher Education under the Chesterfield Education Committee.

Mr. S. E. Peach, Master of Commerce, Director of Further Education at Cheltenham, to be Director of Education at Accrington.

Mr. E. Stokes, Agricultural Organiser for the Notts County Council, to be Principal of the Agricultural College at Kirton.

Mr. T. C. Martin, Science Master at the Lower School, Harrow, to be Headmaster of Richmond School, Yorkshire.

Mr. D. McKay-Ohm, M.A., to be Headmaster of the Grammar School, Colyton, Devon.

Captain J. Brown, M.B.E., M.C., M.A., B.Sc., Mr. F. A. Hedgcock, M.A., D.Litt., Mr. J. M. Jagger, M.A., D.Litt., and Miss R. R. Reid, M.A., D.Litt., have been appointed District Inspectors under the London County Council.

## PRIMARY SCHOOL NOTES.

(BY OUR SPECIAL CORRESPONDENT.)

At the moment of writing the attention of every primary school teacher in the country is fixed on the work of the Standing Joint Committee on Salaries. The preliminary meetings of Local Authority and N.U.T. representatives held on 25th July and 12th August were not meetings of the Committee now sitting. On the 25th July the position was explored by a conference of the N.U.T. Executive and I.E.A. representatives, and a Constituent Committee of twenty was appointed to consider and agree upon the work of the Standing Joint Committee. On 12th August the Constituent Committee met and did the work for which it was formed. It drew up the constitution of the Standing Joint Committee, fixed the number of representatives at twenty-two on each side, asked the Board of Education to appoint a Chairman from the outside and decided the Committee should hold its first meeting on 12th September. The first meeting was duly held on that date at the Board of Education, Whitehall, under the Chairmanship of Lord Burnham.

The appointment of Lord Burnham as Chairman is a happy one. He has had much experience in committee work, is known to be in full sympathy with the hopes and aspirations of educationists, has the happy knack of creating an atmosphere of sweet reasonableness, and is a business man to the tips of his fingers. Under his chairmanship there will be no delay in getting on with the work. The proceedings of the Committee are, very wisely, not to be conducted in public, but a short account of its first meeting has been issued to the press. Of course the national minimum scale when formulated will have to be ratified by the bodies represented on the Committee, and it is hoped it will be of such a character as to mark the beginning of a new era in the history of primary school teachers.

As I expected, there is much misunderstanding abroad in respect of the functions of the Committee, and the effect of the conditions already agreed to by the Executive of the N.U.T. on the progress of the salary campaign. It is true both have been published and should be well known. I am afraid though, they have not been fully studied. Already the Executive of the Union have been bombarded with resolutions giving advice and insisting on the imposition of impossible conditions. The York Association has been particularly active. Its members have sent round the fiery cross in the form of a circular printed in red calling upon all associations to follow its lead and "register an emphatic protest at the action of the N.U.T. representatives." Several associations have already fallen into line. Their "emphatic protests" are duly considered. Other associations have demanded a special conference. The Hartlepool Association say, "We consider the action of the Executive in surrendering—even for a short period—their most effective weapon," i.e., the strike weapon, "is quite unjustifiable." The Liverpool and District Association say "Inasmuch as the decision of the Referendum on Equal Pay overrides the opinion of the vast majority of men teachers . . . the Standing Joint Committee on Salaries should not be bound by the decision of the Referendum." Walsall teachers say no scale inferior to the Rhondda scale "will be tolerated." The Women's Association object to the composition of the Committee and the Men's Associations breathe out threats of secession from the Union should equal pay appear in the scale. Altogether there was much to be considered by the Executive on 6th September, but despite all the leaders very wisely decided to lead. They ratified the functions and conditions in their entirety as published. There is only one piece of advice the Executive may be considered likely to act on, and that is the advice to submit the scale, when formed, to a conference of the Union for ratification. If an executive body

is not ready to act when speedy action is necessary it had better resign. The associations must remember they have not the full knowledge possessed at headquarters, nor have they the experience of the Executive in conducting negotiations. The names of the teachers' representatives should inspire confidence even in those who elected them to the Executive. I am quite sure they are not regarded as novices by the representatives of the authorities. They are as personally interested in securing a good scale as other teachers. They are good fighters. They deserve from all that confidence and support which despite the action of a few they are actually receiving from the vast majority of the teachers.

The representatives are Miss Conway, Miss Wood, Miss Dunn, Miss Phillips, and Miss Scorrer, Messrs. Bentliff, Coward, Chubb, Crook, Dogherty, Folland, Flavell, Jones, Lumby, Powell, Sainsbury, Sherrington, Wilkinson, Wing, and Sir James Yoxall, Captain Goldstone, and Mr. A. A. Thomas.

It is useless to prophesy as to the kind of scale which will result from the Committee's work. One thing, however, must be clearly remembered. The scale on which the Committee is engaged now is not a national standard scale to be established in every area but a national minimum scale below which no education authority in the country shall pay its teachers—a very different proposition. Mr. Fisher is anxious that something shall be done for the worst paid teachers. It is safe to say the Standing Joint Committee will endeavour to satisfy both him and the teachers. To do so it will be necessary the Committee should have regard to two factors which must operate in the construction of the scale if the barest justice is to be done. The scale must meet the demand for a better status for the teacher as teacher and must also meet the present economic position of the teacher as a citizen.

The scale when published must inevitably convey to both men and women the opinion of the Committee on the burning question of "Equal Pay." Enthusiastic supporters of "Equal Pay" should not lose sight of the factors working against them. They are these. (1) The supply of men teachers is a source of grave anxiety to all who believe that boys should be taught by men, (2) Men and women teachers are not in competition for the same post. (3) Custom has established man as the greater spender, (4) The law compels the man to support his wife and children, (5) The cost of raising women teachers' salaries to the level of the men's would mean a big increase in the local rates, with no consequent stimulus to the supply of men teachers, but the great need is for men, (6) Equal pay for men and women teachers would mean that women teachers would enjoy a better social status than men teachers. I think, therefore, it is safe to say the national minimum scale will not embody the principle of equal pay. Unless, however, the teacher representatives are entirely unequal to the task they have undertaken, the scale, i.e., the agreed scale, will be the means of improving the economic position of seventy-five per cent. of the primary school teachers of this country. The meetings of the Standing Joint Committee mark the beginning of a new era in respect of teachers' salaries. It is true the Committee is not a departmental committee. Its decisions are not the decisions of the Board of Education. They will not be issued over the name of Sir Amherst Selby-Bigge. It must be remembered though the Committee exists because of Mr. Fisher's splendid efforts to benefit teachers, that the Board of Education is not only in sympathy with the work of the Committee but is anxious that the work should be successfully accomplished. I hope nothing will be done by teachers themselves to prevent the full development of a national movement to secure "the orderly and progressive solution of the salary problem in public elementary schools by agreement, on a national basis, and its correlation with a solution of the salary problem in secondary schools."

# SUPPLEMENT.

## WORK AND MAKE MUSIC.

(An Address at the Summer Meeting of the Uplands Association.)

BY PROFESSOR J. J. FINDLAY.

WE are often asked why we have purchased our seventy acres of freehold, a country house with its farm : why a company of teachers and parents should think it necessary to acquire land and live upon it at holiday times. We have to live in our own homes, labour in our appointed duties : when the holidays come there are health resorts and farms in abundance where we can seek rest and recreation for ourselves and our children ; or if we wish to study there are now an abundance of Summer Meetings where any branch of learning, any school of reform is offered for discussion. Is it necessary to incur all the expense and anxiety involved in property and buildings just to add one more to the many institutions and societies which help teachers and parents to work for the progress of education ? We think it is necessary and this paper is meant to explain our policy.

Let us at once get to the root of the matter. Our studies in education, our experience with children, have convinced us that our concern with them reaches beyond any syllabus or curriculum of studies and deals with their life-as-a-whole, with their spiritual nature evolving upwards to a higher adult life, and with practical nature, with bodies growing by food and light and air, with limbs using tools, with immediate aims to be expressed in play and work. The great reformers in education, Pestalozzi, Froebel, Herbart, Arnold, Dewey, knew this and from one side or another gave voice to this radical view ; they insisted that life, complete life, was the goal of the educator. In their day and generation they helped the teacher to realise his function and our organised systems of education have accepted fragments of their philosophy. We train our young teachers largely by expounding their doctrines, lecturing and examining upon these, building up a theory and practice of education which reconciles more or less the requirements of public authorities with the ideals of those great reformers.

Now, however much the lecturer, or the administrator, may be satisfied by the result thus obtained, the student, the young teacher, who sits at their feet is confronted by two great difficulties : and these difficulties are not to be lightly dismissed, for they disturb the happiness of every teacher who cares for his work. When the public discuss the causes of discontent in the teaching profession they suppose that the meagreness of our salaries is our chief discouragement, but this is by no means the only source of discontent : the best teachers, those who love teaching and delight to live among children, are discouraged and often embittered because of two fundamental hindrances. The first concerns the public organised system, the second carries back to the aims and ideals of child life and adult life. The public organised system has grown with every decade more mechanical and rigid, for with every decade the power of the public purse, of regulation and control, has been extended. It is true that many successful teachers in middle life, wielding authority as heads of schools or inspectors, dispute this statement, and maintain that every teacher nowadays enjoys as much freedom as he is entitled to, and more than his predecessors could secure. But even if this were so, the fact remains that most of us in the institutions which we serve are limited all round by the necessity of co-operating in the working of a vast machine, with requirements to which we must conform. To complain of this condition is useless : it is part of the social game, in which we have to play our part as best we may without grousing. This machine takes no account of what

Froebel or Arnold taught us : it permits us to learn their doctrines when preparing for certificates, but gives us short shrift if we seek to follow their example ! So we have to accept as a permanent feature of our professional work the disharmony between the system which cramps the lives of our pupils and the ideals in which we were taught to believe.

The second hindrance is still more serious. These ideals—the teaching of the great educational reformers—are the product of a past epoch, they belong to the history of education, so-called : and while we venerate the past and are willing to accept its story as throwing light upon the present, we are keenly alive to the present situation. Since 1914 at any rate we have become aware that the dead are no longer alive. The young generation about us, the young men and women who are taking posts in our schools, are simply not going to listen to us if we talk about children, about life, about ideals in the terms current in our pedagogic text books. They have seen too much, and read too much, many of them in their own souls have felt too much of the comedy and tragedy of these recent desperate years to be greatly influenced by theories of education devised in the lecturer's study. The whole universe is being confronted afresh with the elemental issues of life, of morality and religion, of trade and manufacture, of art and science, of home and city ; these young teachers expect us to speak to them in language appropriate to the gravity of this situation.

Life as a whole, the world of Froebel and Herbart—even the world of Dewey—has changed in its outlook, and the new generation of teachers are asking questions of which we in our young days never dreamed. They want to know about the structure of society, about the meaning of art, about the truth or falsehood of eugenics, about the rights of labour—to mention only a few topics which occur to one offhand. If we or the official authorities say that these matters are of no concern to children and that the teachers should leave them alone, we are met with the direct negative. These teachers want to see life and see it whole ; they dream dreams, and although in their waking hours among the children they must conform and repress they cannot let their minds stagnate. They ask us what we make of Bernard Shaw or Bergson, and it is useless to reply with a discourse on Arnold of Rugby, or even with James's Talks to Teachers and the Binet Tests.

How then can we seek to satisfy them ? or rather how can we prepare ourselves to understand their questions ; how can we, entrusted both with the care of children and with the guidance of young teachers, so develop our own understanding as to be competent to meet squarely and honestly the questions which young England is now asking ?

A critic may say : " There is no difficulty about that. Books on reconstruction abound ! If the ' Times ' and ' The Daily Herald ' do not serve your need as guides to our new era you can turn to the thinkers : the books edited by F. S. Marvin, the visions of Blatchford and Geddes, the statemen of ' The Round Table,' what more do you require ? Study groups can be found in every locality, and every teacher, if he will take the trouble, can reshape his mind by contact with the new thought which is stirring about us." Now this is true enough ; the times demand earnest intellectual effort and we of the Uplands Association came together, as you will remember, soon after war broke out in order to clear our minds, to formulate principles of education which would fall into line with the new ideals of

a new epoch. Our studies in rhythm, in the arts and handicrafts, our inquiry into "The Young Wage Earner," and into Open Air Education have served as the expression of intellectual impulse which is shared by thousands of teachers who do not belong to our small company. To get together for two or three weeks in the Summer Meeting for study and for exchange of view is evidently the right way to begin. It is only of late years that Summer Meetings have become fashionable. Thirty years ago the only chance we had of studying in the holidays was to go to Germany or to Naas, in Sweden; nowadays these gatherings are multiplied on every hand. Such meetings are chiefly designed for teachers, but some of them, like our own, take in a larger circle, and invite both parents and administrators to share in conference and to learn new lessons adapted to a new epoch.

And yet intellectual effort, although essential, proves by itself to be inadequate. We need not delay to discuss the relations of intellect, emotion, and will; we know from our own experience that understanding only comes to us when we find opportunity to test our theories by action: doctrine is not life. Our young people faced with urgent issues of conduct cannot be put off with lectures and essays. We ourselves are in no better case, for the very effort to think in new terms discharges itself not only in a novel tide of sentiment, but in desire for a new way of life. What we seek—and by we I mean not only the few members of this society, but all who are studying education and reconstruction seriously—is development, personal development, reconstruction not only of other people's lives, but of our own.

How then can this fulfilment be attained; or at least how can it be attempted? Since our concern is with children, the most obvious way of turning theory into practice is to work among children, to establish a school, or to find other opportunities for testing out the value of new thoughts by experimental work in schools. Many of us in this society have done such work and we appreciate its importance. We are the inheritors in that sense of a tradition which goes back at least to Pestalozzi, and we know that in one form or another the work of Demonstration Schools is essential to the progress of reform. We appreciate to the full the reports presented year by year to the New Ideals Conference by teachers engaged in special experiments.

One purpose we have in mind in securing this estate is to place it at the disposal of children whose parents and teachers desire to plant them in a congenial atmosphere; we shall welcome children of any class and from any quarter if their play here and their work in this environment can aid the progress of education; we shall welcome, above all, the children of this neighbourhood so soon as their elders realise that we have something to offer that is worth their acceptance, and so soon as our financial resources are more adequate.

And yet, if you accept to the full the position of opinion in our present social crisis, you will agree that the goal of which we are in search goes beyond anything that we can achieve by taking charge of other people's children. I have said that the goal of our quest concerns first of all ourselves and our neighbours, our own views as to the meaning of life and of the course of development. The problems of educational reform have always presented a two-fold aspect: on the one side they are concerned with child psychology and child study; but on the other side they are concerned with adult life, with social reform, and it is this second type of problems which is now stirring our world to new vistas of endeavour and of research. I take it that we have secured this farm and are spending our leisure time in a community—working upon it and exchanging views as partners in it—because we have realised that school reform strikes its roots into social reform, into the practical issues of life as pursued by ordinary men and women, groping for a new social order amid the

havoc wrought by years of desolation and death. In our own way we are, for aught I know, following the same impulse that led Arnold Toynbee in the eighties to spend his leisure time in the slums of Whitechapel and thus to test the value of principles which he had thought out in the cloisters of Oxford. Certainly he, with Canon Barnett and the rest, were concerned to study and teach the workmen in the East End, but they were concerned also for their own enlightenment. We are in the same case. We will associate, so far as conditions permit, with children and study their development; but we cannot do our best for them unless we face squarely the basic problems which underlie the reform of schooling. A few illustrations will make the position clear.

The other day we had a discussion on Civics, and it was pointed out that the children of our primary schools show a lively interest in problems of capital and labour; in their homes they hear a great deal about strikes and they want to talk of these things in the classroom. Now I ask a personal question: what do we know, except through conversation and reading, about these subjects? How far can we raise the problem from the intellectual plane to the personal plane of experience? Some of you got near to the situation in some of its aspects when you went flax-pulling or fruit-picking while the war was on; most of you here learn a little from the drudgery you undertake when you hoe our potatoes or build a wall. You join together as capitalists to own this farm and you realise that you will lose your investment unless its affairs are prudently conducted. My point is that a business such as this, if it secures your interest, serves as a microcosm, a little world in which a sample is afforded of the larger issues which are now convulsing the Great Society (as Graham Wallas calls it). In our educational system it is alleged that courses in Manual Training or Handicrafts afford a like experience, since the scholars are engaged in work. But you know that this is not the case; you know how enormously difficult it is to bring these pursuits into contact with reality, whether economic or industrial; you know that on the contrary many teachers and inspectors aim of set purpose to divorce such courses from the stern realities and difficulties of real achievement. On a farm like this and in a communal home which we here possess an epitome is presented of all the common trades; for the farmer has to be a jack-of-all-trades: water supply, sanitation, fuel, are all thrust under our notice; the local authority and the land laws claim our respectful regard. We cannot build our sleeping quarters or sell our milk without facing the same kind of problems that, from the sociological standpoint, are threatening to bring the social order to a standstill. It is true that some teachers, especially women teachers, have to meet domestic anxieties in their own homes and are no strangers to manual work, but the situation takes on a new aspect when we become active partners in an industrial concern. Our entire training and experience in the scholastic profession has tended to cut us adrift from these realities; sheltered from contact with the world we seek to gain touch with our fellow men and secure an understanding of their position by engaging in an enterprise which is both social and industrial.

And you will not be contented to let the work of this place be merely concerned with manual toil; you will bring your trained intelligence to bear. It has been very interesting to observe how keen some of us are to exploit labour-saving machinery, both indoors and out. You will expect an increase of production; you will welcome the aid of some of the captains of industry. As you know, our camping quarters have only been made possible by using an asbestos roof in place of corrugated iron or wood, which are beyond our means. When once we grasp in our own experience the social import of mechanical devices we shall examine with fresh eyes the ethical problems involved in the conflicts now raging in the great national industries.

So much for work. The crisis of our epoch touches all sides of life, however; we must work, but we must also "make music." It is a commonplace to point out that play and song are being investigated, are claiming a new regard from our young people in these days. We have the dramatic method, so-called, in the schools and the children are everywhere being taught to dance. It is inevitable, therefore, that when men and women associated for a time in a communal life they will seek a better understanding of drama and music. In this atmosphere we are likely to be helped simply because play only finds its normal outlet as a sequel to work. If you ask me why the population of Europe is now in search of a reformed playhouse I should say that it is because our world is now compelled to the realities of labour, of strenuous toil as it has never been compelled for a century past. The rhythm of life alternates between work and play, and the stage can only come to its own when it serves as the solace and enlightenment of an industrious people. It is true that a farm offers no special facilities for dramatic enterprise, but you have already created an open-air theatre with the woodside for your background and the full moon to provide light and shade for your Midsummer Night's Dream.

And when we have done our work and fashioned our play, and gained, perhaps, some new insight into problems of handicraft or drama for children, we have, sub-consciously perhaps, advanced a little further towards an understanding of a third set of problems which underlie all the rest. Of recent years there has been much debate about self-government in schools; theories are in the air and are being to some extent put into practice to enable our young people to develop a communal spirit in the classroom and the playground. The movement is spreading because the entire trend of our time is towards a new spirit of fellowship in adult society. The problems of industry are social problems, the new spirit which is reforming the theatre in men like Gordon Craig is informed by social aims, which involves all concerned, the craftsman, the producer, the author, and the audience in a novel bond of fellowship. We are associated in these few acres of English land as partners in the same movement. We have no special label as socialists or communists, or peasant proprietors, but we are learning self-government by testing our own social capacity. And the effort, whether we succeed or fail, is worth making, because it is only by reducing the theory to a concrete case that we can encounter the sociological and ethical hindrances that underlie the maladies of our time. What we are attempting on a small scale, others with large financial resources are also attempting. We have all been reading "New Town," and are charmed by the attractive vision it presents of a community that is to be, inspired by a nobler view of social and industrial relations.

The land of England is a fair and goodly heritage. It can grow corn and pasture flocks and herds, but its noblest purpose is to breed a new race of children; the offspring of these days of sore distress. Here we stand in possession of these woods and fields, with the winds of heaven all about us; we accept them not because of the money we invest, but because they unite us in comradeship and patriotism. They symbolise our hope of deliverance, of redemption from the bitter anti-social conflicts that have marred the image of God in Britain and in Europe. Here, if we learn aright the message of our new age, teachers and parents with their children may for many years to come be happily employed as landowners and will "work and make music."

Mr. Arthur D. Waley is publishing MORE TRANSLATIONS FROM THE CHINESE through Messrs. George Allen and Unwin, Ltd. The collection ranges from the third century B.C. to the eleventh century A.D., and contains two prose stories of particular interest.

## THE UPLANDS ASSOCIATION.

SUMMER MEETING, 1919.

### Report of the Uplands Association, 1918-1919.

**MEETINGS OF MEMBERS.** For the first time the Association held a meeting in connection with the Educational Conference which took place in London last January. About 30 members and friends met together for tea beforehand; at the public meeting the chair was taken by Miss Alice Woods; Professor Shelley spoke on Freedom for the Child; Miss Purvis gave an account of the work and aims of the Association. Unfortunately Mr. Phillips, who was to have read a paper on the Uplands Colony at Werneth Low, was unable to be present; his paper appeared, however, with other reports, in the handbook issued by the Committee of the Educational Conference.

A small group of members met at Werneth Low soon after Christmas and again at Easter, and the Summer Meeting, of which a report appears below, was held from July 31 to August 16.

**OPEN AIR EDUCATION ENQUIRY.** It was suggested in 1918 that the Association should undertake an enquiry into Open Air Education, a questionnaire was circulated among members, and as a result much interesting and useful information was collected. It is hoped to publish this, together with criticisms and suggestions, in book or pamphlet form.

THE UPLANDS CIRCULAR appeared three times, but in consequence of the increased cost of production, its size was smaller than formerly. In future it will take the form of a special report issued at intervals as required, but notes of the Association's doings will also appear in "The Educational Times."

THE FIFTH SUMMER MEETING of the Association was held from July 30th to August 16th on Werneth Low, near Hyde. The Farm, which is the headquarters of the Association and the property of the Uplands Farm Society, lies almost at the summit of a wide sweep of hill country overlooking the plain below. The farmhouse and buildings are constructed of the grey stone of the district, and their long level lines add to the sense of peace and permanence given by the massive hillsides and wide open spaces. Close about the farmhouse lie fields of wheat, oats, and hay, divided from one another by grey stone walls; descending to the South are hilly pastures cloven by two deep fissures, the Cloughs. On the steep sides of the latter grow oak, ash, and rowan trees, and a sweet undergrowth of grass and flowers closes over the cool waters of a little stream cleaving for itself a still narrower bed. In the tall trees of the Clough magpies chatter at dawn, and all day long gay little willow wrens feed and sing in the bushes. The hills of the Peak district bound the distant southern horizon, but in the middle distance are the tall smoking chimneys of mill villages. From the top of Werneth Low one can look westwards across the Lancashire dales and far into Wales or northwards to Manchester and its neighbouring towns, often hidden by a heavy pall of dusky smoke. The two vistas present something more than a mere contrast. Doubts as to the wisdom and righteousness of the makers of modern cities arise in the mind, as, conscious of the delicate harebells at one's feet, of the exhilarating and reviving air around, the eyes wander to the crowded chimneys, to the smoke which lies like a blight on the fair land, to the narrow streets and squalid houses which one sees in imagination. We turn with relief to the little homestead and to the summer fields.

On the farm, gathered together for the Summer Meeting, were parents with their children, teachers and trainers of young people and many others engaged or interested in social and educational work. The purchase of the Uplands Farm was the outcome of a strong desire on the part of

members of former meetings, not only to escape from the atmosphere of lecture room, desk and blackboard, but also to live during the period of study, a life of actual work and mutual service. It was felt that working and thinking should and could on occasion go hand in hand and that a real opportunity for experience of a valuable kind would be missed in confining the efforts of the Summer Meeting to lectures and seminars. The second meeting on the Farm has confirmed this view. It has seemed possible to arrive at more balanced judgments, and to carry away a larger store of suggestion and stimulus than can be gained by mere concentration upon lecture and notebook.

Apart from lectures and discussions the activities open to the students fell mainly into three divisions—Farm and Garden Work, Craftsmanship and Play Production. Each course was under the direction of expert instructors, and took place at allotted hours.

All students took fatigue duty in the various services needed in the daily life and for the comfort of the community. The serving of meals, washing up, brushing and dusting, wood gathering, etc., were carried out by orderlies. And it was in this mutual service, undertaken at the express wish of the members themselves, that satisfaction was found and also much grist for the mill of discussion. The mornings were mainly devoted to practical work, the early afternoon to leisure, the evenings to lectures, discussions, and social intercourse.

Life on the farm was naturally very informal. Lectures were held in the barn, or in the very hot weather under the shade of a big sycamore tree. Not many visitors could be housed in the farm itself, so that some lodged in neighbouring cottages and bungalows; real open-air life was enjoyed by the campers, whose quarters among the oaks were ideal for those who like sleeping under the stars and washing at a spring. The provision of more adequate accommodation close to the farm itself has already been taken in hand by the Uplands Farm Society.

Farm work engaged the energies of a number of students. In the summer especially the unskilled worker finds that even he can be of use. In singling turnips, hoeing potatoes, raking in the hay field, every extra hand lightens the burden, and in all the tasks allotted the raw recruit found interest and enjoyment.

The Craftsmanship class grew daily in diligence and enthusiasm under the direction of Mr. Goodyear.

When the Play Production students gave scenes from "The Midsummer's Night Dream" every management in the kingdom would have envied the natural setting of the play—a large hollow surrounded by oaks and backed by a steep slope of ferns and trees, all lit up by a big yellow moon, small children for fairies thoroughly enjoying themselves in games of hide and seek among the tree stems, bare legs and arms gleaming in the moonlight. It was very much regretted that Professor Shelley, who was to have directed the Play Production Class, had been suddenly called away to duty on the Rhine; in his place Mr. Reece and others gave valuable help.

Mr. Caldwell Cook gave two delightful lectures on his work with the boys at the Perse School, profusely illustrated by the boys' own poems and their amusing "ilonds," with which readers of "The Play Way" will be familiar.

Mrs. Meredith opened a discussion on the teaching of civics. The conclusion arrived at was that the child's own small community, his school, where the judgments required are really within his scope and comprehension, provides training in civics if he is allowed responsibility and initiative.

Miss Fox gave a summary of the information she had collected concerning Open Air Education. One point made clear by the data given was specially interesting to Uplanders—namely, that in all State-controlled schools open air work is intended as a remedial measure and is never provided for normal children. There is scope for work in this direction, and it is hoped to add to the information collected and to publish it in book form, somewhat on the lines of *The Young Wage Earner*.

## Mr. JOHN MURRAY'S NEW SCHOOL BOOKS.

Teachers are invited to apply for a specimen copy of

### EXERCISES IN ENGLISH GRAMMAR

By R. B. MORGAN, M.Litt., Author of "A NEW ENGLISH GRAMMAR," now in its Fifth Edition (42nd thousand).

**2s.** The demand expressed by teachers for additional exercises of the same interest and cheerful character as those which have made the parent book so popular has induced the author to compile this volume of Exercises. **2s.** [Now Ready]

IN THE PRESS.

**EXERCISES IN ENGLISH COMPOSITION.** By E. E. KITCHENER, M.A., Author of 'English Composition.' **2s.**

For the use of teachers who prefer to lay down the principles of composition by oral work in class.

**GRAMMAIRE FRANCAISE ÉLÉMENTAIRE.** By W. MANSFIELD POOLE, M.A. New (Fourth) and Revised Edition. 25th thousand. **3s.**

The exercises have been amplified and almost entirely re-written, and many additions and corrections have been made in the text.

**LA LANGUE FRANCAISE ; à l'usage des classes moyennes et supérieures.** By G. KESSEN BUZZA, B.A., and E. E. HUNT, B.A. **3s.**

This book is intended for pupils in their Third and Fourth Years of French. Especially suitable for use after Poole's "Grammaire Française Élémentaire."

By PROFESSORS WALTERS AND CONWAY :

**LIMEN :** a First Latin Book. 6th thousand. **3s.**

**AD LIMEN :** a Companion Book to Limen, for more advanced study. **3s.**

**ANTE LIMEN :** based upon Limen, for younger beginners. **3s.**

(KEYS TO THE ABOVE CAN BE OBTAINED BY TEACHERS.)

**PRINCIPLES AND METHODS OF TAXATION.**

By G. ARMITAGE SMITH, M.A. New Edition. **5s.** net. Containing Financial Statements of War Expenditure and the means of increasing the revenue during the war.

**EXERCISES IN PHYSICS :** for the use of Schools. By J. H. LEONARD, B.Sc., and W. H. SALMON, B.A. With or without answers. **1s. 6d.**

A series of invaluable Exercises, carefully arranged and graduated for class or home work.

**LONDON : JOHN MURRAY, ALBEMARLE STREET, W. 1.**

## EDUCATION ABROAD.

### National Scales of Salaries (Scotland).

Our Scottish correspondent writes :

One of the most important provisions in the Education (Scotland) Act, 1918, was that contained in Sec. 6 (c). This section provided for the preparation of a scheme of scales of salaries for teachers employed in Scottish schools, a scheme which was to be approved by the Department, the Education Authorities, and the representatives of the teaching profession. The new scales were announced recently and have been warmly welcomed by Scottish teachers.

The fact that these scales have the Government *imprimatur* marks a new era in the educational world. Previously the salary paid to a teacher was arranged by the teacher and his immediate employer; the Department took no cognizance. This arrangement has never been satisfactory, and has always led to the most absurd differences and anomalies in contiguous localities. Two years ago the Craik Commission reviewed the question of remuneration of Scottish teachers, but its findings were not made compulsory on Boards, with the result that practically no improvement was effected, notwithstanding the inconsistencies, hardships, and glaring inadequacy of payments revealed as a result of their enquiries. Then the Government made a substantial grant towards relieving Scottish teachers, and now we have the new national minimum scales, which represent for the various grades of teachers the lowest salaries to be paid to them, and which, of course, Education Authorities may improve upon.

A basic scale, i.e., a salary below which no teacher can be paid, fixes a minimum of £130 for women and £150 for men, the corresponding maxima being £200 and £250. Up till now the average salary of Scottish teachers has been £134—the absolute minimum is but little removed from this. Modifications in the basic scale is the mode adopted of remunerating other teachers. Teachers with three years' training begin at £160 (men), £140 (women) and rise to £280 and £210. For four years' trained teachers the figures are £180, £160 as minima, and £300 and £230 as maxima. A distinct preference is shown to teachers who have graduated, men rising to £360, women to £300. Over and above this headmasters receive £10 per teacher on their staff, infant mistresses £3 per teacher where the number of teachers is not below six. Scales for Elementary School teachers only are furnished, those for Secondary and other teachers being left to be drawn up by the Education Authority, and subject to the approval of the Department. The principle of proper placing has been adopted, i.e., the salary to be paid to a teacher must be not less than he or she would be entitled to receive if the new scales had been in force when he or she entered upon duty in Scotland. All salaries under the scale take effect as from May 16th last—the date of entry of the Education Authorities.

Criticism will be confined pretty much to points of detail. No mention is made of the method in which increments are to accrue. Automatic increases will lead to the anomaly of efficient and inefficient teachers being treated alike. It is expected that the Authorities in drawing up their schemes will have a safeguarding clause inserted. Most teachers, again, will reach their maxima in nine or ten years; after this time promotion will be their only hope. Teachers then will clamour for still higher maxima. The remuneration of headmasters is made to depend on the number of teachers in the school. This will have the effect of masters making an effort to secure as big a staff as possible, but it is questionable if the procedure of paying at the rate of £10 per teacher is the best. In a school of 8 or 9 teachers the headmaster is usually in charge of a class, and this, coupled with his administrative duties and supervision of the school, calls for perhaps more sustained effort than is required from the headmaster of a school with, say, 15

teachers, and whose whole time is spent in supervision and administrative work. It may be advisable to proceed by threes or fives in recommending the salaries of masters. The recent discussion on equal pay for men and women received a knock-out blow when the plebiscite was taken a month or two ago, and the new scale relegates it still further to the land of forgetfulness. No doubt some of the lady teachers will try to resuscitate this question after a decent interval.

The matter of financing the new scheme is a difficult one for authorities, but it is recognised that something must be done to attract entrants to the profession, and the new scale, coupled with the recently instituted super-annuation scheme, will do something to increase the number, and at the same time allay the discontent that has continued so long.

### A Danish Experiment.

A young Dane is visiting England to arouse interest in and to secure support for the establishment of an international people's college near Copenhagen. He came over last year, but although he saw many influential people, such as the late Canon Scott Holland, Mr. Arnold Rowntree, Sir Michael Sadler, and the Principal of Ruskin College, who gave him much encouragement, the war conditions were unfavourable for his propaganda. Conditions are now more favourable, and he expects considerable English support.

The idea is to secure an estate that is available on the edge of a lake not far from Copenhagen, where it is hoped that enthusiasts from different nations, mostly Quakers or Mennonites, will be able to add to the existing buildings, so that the accommodation will be adequate for the large number that it is hoped will follow the first body of students. It is intended that the students shall be nominated by trade unions, Labour organisations, co-operative societies, and other progressive bodies.

The college will be for men and women irrespective of creed, and though it will not be bound to any particular denomination "it will especially employ teachers who believe in the association of the Christian view of life with the democratic movement, and the development of a supernatural spirit as a way of social and individual progress." The course will include languages, psychology, history, sociology, and hygiene, and special branches will consist of agriculture, economics, and commerce. The organisers believe that they can work down the cost of board, lodgings, and tuition to £60 a year for each student, but the student will be expected to help in the production of foodstuffs on the estate.

The secretary of the scheme is Peter Manniche, Sonder Boulevard, 87, Copenhagen.

### Public Education in Queensland.

The Australian State of Queensland needs more population, and the opportunity for settlers is a bright one in the period ahead. The Queensland Government is one which does much for the common weal of its citizens.

Primary education is free and compulsory. The State Schools throughout the State number 1,512, and the teachers total 4,050. There are also 10 Grammar Schools for boys and girls in the principal cities, 19 Technical Colleges, a University, and a School of Mines at Charters Towers, N.Q. State High Schools have also been established in Gatton, Warwick, Gympie, Bundaberg, Mount Morgan, Mackay, and Charters Towers; education at these schools is free, but candidates for admission are submitted to a test examination to show that they have been educated up to the fifth standard of the State School. A Rural School has also been established at Nambour (North Coast Line), where the subjects embrace agriculture, trades, etc., in addition to elementary education. In the sparsely populated districts, where no schools exist, State itinerant teachers pay periodical visits during the year, and impart instruction to the settlers' children.

## ASSOCIATION NEWS.

### Educational Institute of Scotland.

The 73rd annual meeting of the Educational Institute of Scotland was held in Edinburgh on Saturday, 20th September. There was an exceptionally large attendance when the President, Mr. D. M'Gillivray, M.A., Glasgow, rose to deliver his retiring address. He devoted a considerable portion of his speech to the Education Act of last year, and said that its purely educational provisions breathed the noble idealism of Greece in regard to the training of citizens. Much of the burden of making the Act a success devolved upon the teacher, and the speaker asked the public to trust the teacher as they trusted the doctor, the lawyer, or the minister. The increased interest in education shown by the Labour Party was commented upon. Labour, he said, had now come to see in education a weapon ready to its hand. The workers had recognised that knowledge was power, and they were determined to have education of the best kind.

Considerable, and at times, heated discussion took place on the report on salaries, but in the end the motion was carried that the meeting approve generally of the minimum national scales, provided the status of existing teachers was made similar to that for graduates. This question, which had already been discussed at length, was subsequently reopened, and an amendment was moved that the Institute refuse to accept the national minimum scales as a solution of the salary difficulty; this amendment was carried by a large majority.

For the ensuing year Mr. Thomas Glover, M.A., High School, North Berwick, was elected President; the other officials were reappointed.

### The Teachers Council.

Up to and including Saturday, the 20th September, the number of applicants for admission to the Register was 29,800, a total which is marked by a great increase during the months of the vacation. Thus, in August, over 400 applications were received, this being four times the usual number for the month.

The London Teachers Association has decided to undertake a special campaign in favour of registration, and the generous help of the staff of the Association and of the School Secretaries is being once more enlisted on behalf of the movement. A previous effort of this kind, undertaken some years ago, brought many recruits. Since the purpose of the Council's existence is to promote the unification of the teaching profession it may be worth while to point out that it takes the view that there should be no artificial barriers against transfers from one kind of teaching work to another, and that teachers in every grade should receive adequate salaries according to their qualifications. In particular the Council has urged that qualified teachers of special subjects should not be placed in an inferior position in the matter of status and salaries.

### The College of Preceptors.

Arrangements are now completed for starting the special training course for teachers of commercial subjects. Intending students should apply at once to the secretary, College of Preceptors, Bloomsbury Square, for particulars of the lectures and classes.

On October 24th Mr. F. J. Gould will give a demonstration lesson, illustrating a method of moral instruction.

### School Nature Study Union.

A general meeting will be held on Saturday, October 11th, at 3 p.m., in the London Day Training College, Southampton Row, when Mr. A. Clutton Brock will deliver an address on "Animism." Dr. Dukinfield H. Scott, F.R.S., will preside. Admission is free, and teachers are specially invited to attend.

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### Mr. Balfour and Cambridge.

It is announced that the Right Honourable Arthur J. Balfour, O.M., is to be nominated as Chancellor of Cambridge University in succession to the late Lord Rayleigh. Mr. Balfour is a Cambridge man, having graduated from Trinity in 1870. In 1888 he received the honorary degree of LL.D. His relations with Cambridge have been close and continuous ever since he went up from Eton and his association with the University has been strengthened by the circumstance that he was a brother-in-law of the late Chancellor and also of the late Professor Henry Sidgwick.

### Manchester Municipal Training College.

The Manchester Education Committee propose to purchase a site of 52 acres at Didsbury for a new Training College for men and women. Residential and day students will be provided for and the new institution will replace the one at present carried on in the Y.M.C.A. building. It is not stated that the proposed Training College will be connected with the existing Department of Education in the University of Manchester.

### London University—A School of Librarianship.

The School of Librarianship recently instituted by the University of London at University College will begin its work on October 1. It will be formally opened by the Director and Principal Librarian of the British Museum, Sir Frederick George Kenyon, K.C.B., M.A., D.Litt., on Wednesday, October 8, at 5-o. The Director of the School is E. A. Baker, M.A., D.Litt.

The following appointments to the staff of the School have been made: Bibliography, Arundell Esdaile, B.A. (British Museum Library); Cataloguing and Library Routine, W. R. B. Prideaux, B.A. (Reform Club Library); Classification, W. C. Berwick Sayers (Croydon Public Libraries); Public Library Law, H. West Fovargue (Hon. Solicitor, Library Association); Library Organisation, B. M. Headicar (British Library of Political Science); Literary History, R. W. Chambers, M.A., D.Litt. (University College Library); Literary History and Book Selection, E. A. Baker, M.A., D.Litt.; Palæography and Archives, Hilary Jenkinson, B.A., F.S.A. (Public Record Office); Assistant to the Director, L. F. Newcombe.

### Manchester University.

The newly established Chair of Russian at Manchester is to be called the Sir William Mather Chair of Russian. The first Professor is Mr. M. V. Trofimov, M.A., who will enter upon his duties this term.

Michael Vasilevitch Trofimov was born in 1884 at Archangel. In the University of Petrograd he graduated with distinction. During the years 1910-14 he held the post of Assistant Lecturer in Russian in the University of Liverpool. He left Liverpool for London, and before his appointment to the Manchester Chair was University Reader in Russian at King's College, London University. Here he has been most successful in conducting the large Russian department, at the same time by his published work adding to his reputation as a scholar.

### Continuation Schools in Sheffield.

Two Sheffield steel firms, Messrs. Osborn and Messrs. Doncaster, have decided to co-operate in the establishment of a Day Continuation School for their young workpeople. All newcomers to the works who are under the age of 16 will be expected to attend the classes, and they will receive full wages for their attendance. Among the principal subjects to be taken are applied mechanics and machine drawing.

**LONGMANS, GREEN & CO., 39, Paternoster Row, London, E.C. 4.**

## BLUE BOOK SUMMARY.

### Higher Education. Regulations for Grant in Respect of Maintenance Allowances.

The Board of Education have published the following Regulations:—

1. Subject to the conditions prescribed in these regulations, the Board of Education may, as from 1st April, 1920, pay to Local Education Authorities under Part II. of the Education Act, 1902, an annual substantive grant in aid of expenditure incurred under arrangements approved by the Board on maintenance allowances to pupils in secondary schools, and other institutions of higher education, who are in need of assistance to enter upon or complete courses of education.

2. The general object of the substantive grant under these regulations is (1) to make secondary schools and other institutions of higher education generally accessible to children and young persons who show special promise of profiting by prolonged education; (2) to enable the pupils in these institutions to stay long enough to obtain full benefit from the course they undertake.

3. The Local Education Authority should review their arrangements and submit them to the Board for approval before the 31st December, 1919, and thereafter from time to time as the Board may require. It is desirable that these arrangements should indicate (so far as is possible before the estimates for the year 1920-21 are settled by the Authority) the amount of the expenditure which it is proposed to incur in the year 1920-21, as well as the manner in which the administration of the Authority will be conducted in this respect.

4. The allowances which will be taken into account under these regulations are those which are granted for maintenance, as distinct from the payment of tuition fees or other charges made by the schools or institutions in respect of the pupil's education. No payment by the Local Education Authority of tuition fees or of charges for the use of books, stationery, etc., which do not become the property of the pupil, and no payment in respect of maintenance allowances for pupils who are required to pay such charges, may be included in the expenditure on maintenance allowances for the purpose of these regulations.

5. Grant is not payable under these regulations in aid of expenditure on maintenance allowances to pupils or students in aid of whose maintenance grants are made by the Board under other regulations, e.g., those relating to "bursars" or students in training, and Local Science or Art Exhibitors.

6. The grant payable for a year will be calculated at half the net expenditure of the Local Education Authority, approved by the Board for the purpose of these regulations upon maintenance allowances as herein defined, subject to the maximum limit shown in Article 7.

7. The grant payable for a year shall not exceed a sum calculated as follows:—

3s. per unit of average attendance of scholars in public elementary schools within the area of the L.E.A. during the year.

In a county this average attendance will include the attendance in public elementary schools of the non-County Boroughs and Urban Districts as well as in those which are maintained by the County Council under Part III of the Education Act, 1902.

8. The grant is conditional upon the Board being satisfied that the Authority—

- (i) has performed its duties under the Education Acts;
- (ii) has supplied punctually such information and returns, for the purpose of these regulations, as the Board require.

If the Board are not satisfied on any of these matters they may withhold or make a deduction from the grant.

If a deduction is made exceeding five hundred pounds, or the amount which would be produced by a rate of one halfpenny in the pound, whichever is the less, a report stating the amount of and the reasons for the deduction will be laid before Parliament (Education Act, 1918, Sect. 44 (5)).

9. The grant will be payable by instalments.

The instalments payable during a year will be calculated at half the net expenditure of the previous year, provided that they do not thereby exceed the maximum limit prescribed for the grant by Article 7. The instalments may, subject to that same proviso, exceed half the net expenditure of the previous year, if the Board are satisfied by Estimates submitted by the Authority that the expenditure of the year will exceed that of the previous year.

If the sum paid by way of instalments should prove to have been in excess of the grant due, as finally determined by the Board, such excess will be repayable to the Board.

10. Net expenditure means expenditure upon maintenance allowances as herein defined less all receipts relating thereto except receipts from rates raised by the Authority or from Grants.

11. FINAL ADJUSTMENT.—The grant will be finally adjusted after the audited accounts for the year and any other returns required by the Board for the purpose have been received and examined.

It will be calculated to the nearest pound, a fraction of a pound in the final result being ignored or reckoned as a pound according as it is, or is not, less than ten shillings.

12. FINAL DECISION OF THE BOARD.—If any question arises as to the interpretation of these regulations, or as to the inclusion or exclusion of any items of receipt or expenditure for the purpose of calculating the grant, the decision of the Board shall be final.

## LETTERS TO THE EDITOR.

### Age and the Play Way.

In answer to enquiries as to the ages of the children concerned in my articles on the Play Way in Lancashire, it must be said they varied greatly. The youngest was ten, the two eldest dullards of thirteen and a half, while two verged on slight weakness of intellect. Nevertheless all were stimulated by the Play Way and the standard of proficiency was unusually uniform. Age is no obstacle to the Play Way methods; it merely compels a varying curriculum.

Nature and imagination are the fields for young children to run loose in; boys of fourteen prefer humour and character study (after Dickens), and of course adventure; although if brought up as Playboys they rarely lose delight in descriptive literature, even where their creative power wanes. Just as in "passive" English boys read "Tanglewood" at eleven, "Oliver Twist" at twelve, "Ivanhoe" at thirteen, and so on, but the READING goes steadily on, so the Play Way methods go on while the subjects vary.

I remain, yours, etc.,

B. A. WILMOTT.

The everyday life of the British Salonica Forces—mostly from a humorous point of view—is described in a book entitled THE SALONICA SIDE-SHOW, by Lieut. V. J. Seligman, which is to be issued on September 9th by Messrs. George Allen and Unwin, Ltd. An important chapter entitled "The Tragedy of Constantine" throws an entirely new light on the development of "Tino's" character and the part he played. Mr. Seligman has obtained first hand information from the ex-King's secretary, M. Melas, who has hitherto refused to publish the inside history of those fateful days.

## PERSONAL NOTES.

**Sir Napier Shaw, LL.D., Sc.D., F.R.S.**

Sir Napier Shaw, President of the Educational Science Section of the British Association, is the Director of the Meteorological Office. He was born in 1854 and educated at King Edward's School, Birmingham, Emmanuel College, Cambridge, and the University of Berlin. He was lecturer in Physics at Cambridge and Senior Tutor at Emmanuel College, becoming Assistant Director of the Cavendish Laboratory in 1898, and was Knighted in 1915.

**Professor Macalister.**

After a long illness Dr. Alexander Macalister, Professor of Anatomy at Cambridge University, died at Cambridge from the effects of an operation. Professor Macalister was born in 1844, in Dublin, and educated at Trinity College, Dublin. In 1869 he was appointed Professor of Zoology at Dublin University, and in 1877 Professor of Anatomy and Chirurgery. In 1883 he succeeded Sir George Humphreys at Cambridge, being the first Professor of Anatomy who was entirely devoted to his subject to the exclusion of practising. He was a Presbyterian, an authority on Egypt, and a great traveller.

**Mr. W. S. Dann, M.A., M.B.E.**

Mr. W. S. Dann, History Master at the Manchester Grammar School, was appointed H.M. Inspector for the new Continuation Schools. He was educated at Blackheath School, and at University College, London. Mr. Dann is well known to the Workers' Educational Association, and has been honorary secretary of the Manchester branch of the Historical Association.

**Sir Richard Glazebrook.**

Sir Richard Glazebrook, Director of the National Physical Laboratory, retired on reaching the age limit on 18th September.

**Professor J. E. Petavel.**

The Lord President of the Council has appointed Joseph Ernest Petavel, Professor of Engineering and Director of the Whitworth Laboratory, Manchester, to be Director of the National Physical Laboratory. He was educated at University College, London, and was engaged in scientific research at the Royal Institution and at the Davy Faraday Laboratory until 1898. In 1900 he was elected Fellow of Owen's College, Manchester. He is a member of the Advisory Committee for Aeronautics of the Air Ministry.

**The late Professor F. W. Moorman.**

It is with great regret that we learn that Professor F. W. Moorman, who occupied the chair in English Literature at Leeds University, was drowned while bathing with his children at Hawkswick, Upper Wharfedale. Professor Moorman was educated at University College, London, at the University College of Wales, and at Strasburg University. In 1885 he became Assistant Lecturer in the English Language and Literature at Aberystwyth; in 1888 he was appointed Professor of English at Yorkshire College, later the University of Leeds, where his work as an authority on the Yorkshire dialect and his gifts as a teacher won the admiration and esteem of his pupils.

**Mr. F. J. S. Whitmore.**

Mr. F. J. S. Whitmore, M.A., Oxon., for twelve years an Assistant Master at Denstone College, has been appointed Second Master of Queen Elizabeth's Grammar School, Kettering.

## NEWS ITEMS.

**All-round Development.**

Larger buildings are required by the Caldecott Community for Working Men's Children. Housed at Charlton Court, East Sutton, Kent, the children help on the farm, in the garden, and in the house, and effective education is given by encouraging the growth of what is best in each child.

**Cold Rooms.**

The schools at New Hartley, Northumberland, are alleged to be inadequately heated, and the parents say that they will boycott them if an improvement be not effected before the winter.

**Fream Memorial Prize.**

Miss Doris Anderson, Southfield, Ropley, Winchester, a student of University College, Reading, has been awarded the Fream Memorial Prize for 1919, by the Board of Agriculture, for taking first place in this year's examination for the National Diploma in Agriculture.

**Oxford and Cambridge Expenses.**

Now that battels alone mount to £70 and upwards per term, the minimum cost of an education at the older universities is about £260.

**Fees at Eton.**

The Headmaster at Eton College has sent a circular letter to parents calling attention to a new scale of payment. The fee is now to be £200, and apparently almost inclusive, as a large number of separate charges have been merged in it. This amount compares favourably with bills exceeding £300 sometimes paid for girls at finishing schools.

**King's Scholar.**

Walter W. Grave is the winner of the King's Gold Medal for being the most proficient scholar at King Edward VII Grammar School at King's Lynn.

**Converted Grammar School.**

The Holland (Lincolnshire) County Council have converted the Grammar School at Kirton, near Boston, into an agricultural training centre.

**Solomon Supplemented.**

At a meeting of the Worcester Education Authority Mr. Willis Bund said Solomon said that there were three things that could not be satisfied. If he had lived in these days he would have found a fourth—the elementary school teacher.

**Municipal Printing at Newcastle.**

Naturally enough the master printers of Newcastle do not view with equanimity the proposal that the Corporation should do its own printing.

When paper was scarce, the Education Committee set up a small plant, which was found very useful also to other departments, but as the Committee can work only for itself, the suggestion was made that the plant should be taken over by the municipality, but a strong protest has been made by the trade.

**Secondary School or Storehouse.**

About 700 boys and girls in Cardiff are being compelled to continue their education in a building that does not offer the usual facilities of a secondary school, and Mr. Dyche, the headmaster, criticised the War Office for retaining the buildings for the purpose of storing discarded equipment, now that the need for accommodating wounded soldiers has passed away. Why should the education of these young people suffer when any sort of buildings would do for warehouses?

## LITERARY SECTION.

### BOOKS AND THE MAN.

#### The Last de Morgan.\*

Asked how he liked someone a young Frenchman replied, with Gallic ardour, "I do not like—I love." There is no middle way with William de Morgan; readers of fiction either love him or leave him alone. And of readers in two hemispheres he has indeed a goodly host. The present volume is dedicated by his wife "To all our American friends who by their never failing sympathy and generous appreciation of his writing were a constant source of pleasure and gratification to my husband." In many a dominion home and clearing, in bush and backwood, veldt and prairie, his name is a familiar one, and his works have been translated into several languages.

In a Few Last Words to the Reader Mrs. de Morgan, who did not live to see the publication of this his posthumous book, has left some interesting particulars about her husband's methods of work. He would start a novel without making any definite plot. "He created his characters and then waited for them to act and evolve their own plot. In this way the puppets in the show became real living personalities to him, and he waited, as he expressed it, 'to see what they would do next.'" Husband and wife were wont to read together every Sunday evening all he had written during the week. Thus the novelist's audience of one, like the wider audience to follow, "got to believe in the reality of the characters"; to think of them "as real live people." "I have frequently asked him," she adds, "when . . . he had finished writing for the day, . . . such a question as, 'Well, have they quarrelled yet?' and he would reply, 'No. I don't know if they will come to a quarrel, after all; I must wait and see what they do.'" The author's handwriting was clear and distinct, with few erasures. "He never made rough copies and practically finished as he went." Regarded simply as a mechanical effort what a wonderful achievement was this of the de Morgan novels. For those eight volumes, the literary output of about as many years at the close of an old man's life, must on a modest computation aggregate about 4,500 pages or perhaps not far short of two million words, written with the author's own hand "and practically finished as he went." But blessings on that artist hand, transmitter of beauty, whether on canvas, or in imperishable enamel, or through the printed page.

Let no fearful reader with war-frayed nerves fight shy of the title "The Old Madhouse." It is just one of the author's little jokes, and no grisly inmates emerge from the old, rambling, tumble-down house so named, in which two light-hearted young couples propose to start housekeeping and therein live happily ever after. Unfortunately, these cargoes of affection running, so to say, on parallel lines somehow manage to jump the points, and as the story develops a regrettable mix-up ensues which the author, alas, did not live to disentangle. The plot centres, however, mainly in the disappearance of Uncle Drury, who "weighed eighteen stone, and always rumbled in his chest before he spoke, like the works of a big clock before it strikes." Rather a bulky item, one would gather, to be suddenly and mysteriously mislaid, but so it was; and through 555 pages this mystery thickens. But the dialogue and conversation are the thing, and the author's accompanying chaff. The "puppets in the show" are as alive and

convincing as ever, and although "The Old Madhouse" may not quite touch the highwater mark of "When Ghost meets Ghost," let us be thankful that the feast provided amid the strain and distractions of war-time is as varied and delightful as it is. If de Morgan did not live to finish the story yet from notes which he left, and the fact that he had told her "as much as he knew himself of what the end of the book was to be," Mrs. de Morgan in a concluding chapter is able to unravel the mystery of Uncle Drury's disappearance, and in the unravelling *The Old Madhouse* itself plays a weird and somewhat uncanny part.

Suggestions of supernatural happenings are present in all de Morgan's novels. "As for ghosts, they would be interesting and not a drawback, unless they were the sort that broke things. Perhaps, however, these last would rank as phenomena, not ghosts." Thus Nancy, otherwise known as "Elbows," reviewing the possibilities of *The Old Madhouse* as a background for connubial bliss. Doubtless when a biography duly appears, or the promised book by Mrs. de Morgan on Spiritualism, light will be shed on this bias towards the occult, but meanwhile the general reader may gather somewhat from contemporary writings. In the *Life of Stopford Brooke*, by Dr Jacks, mention is made of a meeting in old age between Stopford Brooke and de Morgan, who had been fairly intimate in earlier life; and Mrs. de Morgan is referred to as Clairvoyante; she had the power of projecting her consciousness outside her body. Some such psychic experiences were probably not unconnected with the various super-normal happenings that occur so freely in her husband's stories.

The literary art of de Morgan was in touch with the creative work of some other great Victorians at many points. Comparison with Dickens has become a commonplace, and the coincidence of the two Masters' last and incompleting stories dealing with a disappearance is obvious. De Morgan's double role as an apostle of beauty both in craftsmanship and literature suggests parallels with du Maurier and with William Morris; and his literary art displays pre-Raphaelite qualities in its forthright veracity, its mysticism, its minute detail and careful delineation of every part of the picture. But it is perhaps with the spirit of Robert Browning, to whom allusion frequently occurs in the novels, that de Morgan's deeper qualities show most in common. Both to the end retained their faith in what Stevenson in cautious phrase has envisaged as "the ultimate decency of things."

They reminded men and women in a materialistic age that the things which are not seen, those intangible realities that are eternal—the conquering power of love, constancy surviving death, the communion of souls—are indeed the very stuff of existence, in comparison with which the material framework of life seems but the baseless fabric of a vision. And Browning's valiant lines, the Poet's own swan-song, published on the day he died, that last day of December, 1889, may fitly be applied to William de Morgan, who also on a "last Friday night in December . . . laid down his pen in the middle of a sentence never to be completed":

"One who never turned his back but marched breast forward,

Never doubted clouds would break, . . .  
Held we fall to rise, are baffled to fight better,  
Sleep to wake."

# THE COLLEGE OF PRECEPTORS

(INCORPORATED BY ROYAL CHARTER),

BLOOMSBURY SQUARE, LONDON, W.C. 1.

## Training Course for Teachers of Commercial Subjects.

THE COLLEGE OF PRECEPTORS offers a course of Training in Teaching specially designed for teachers of Commercial Subjects. The course is open to teachers of commercial subjects in day schools, continuation schools, or evening institutes, and to others who contemplate taking up such work.

The course will extend over two sessions, that is, from September to June in each of two years. Each session will consist of two terms, the first term extending from September (or October) to December, and the second from February to June (omitting the Easter vacation). Students will be required to attend during each term twelve weekly lectures on the principles of teaching and a discussion class after each lecture. Arrangements will be made for the students to visit classes where commercial subjects are being taught, while the students themselves will be required to teach under supervision and to prepare weekly essays on subjects connected with the topics discussed in the lectures and discussion classes and with problems of practical teaching. Subjects to be discussed will relate to commercial education in all its aspects, and the full course is designed to afford to teachers of commercial subjects an opportunity of gaining a training in teaching such as will satisfy the requirements of the Teachers Registration Council.

Students may take classes for one session only. The fee for one session is £2 2s., payable in instalments of £1 1s. at the beginning of each term.

Those who intend to take the course are advised to call at the College in order that their individual circumstances and needs may be noted for the information of the Director of the Training Course. The Secretary may be consulted on any day, between the hours of 11 and 1 in the morning, or between 3 and 5 in the afternoon, Saturdays excepted, or at some other time by appointment.

## REVIEWS.

## Education.

**TEST MATERIAL FOR THE MEASUREMENT OF INTELLIGENCE :** by Lewis M. Terman. (Geo. G. Harrap and Co., London. 3s. 6d. net.)

In a recent issue we reviewed Professor Terman's *The Measurement of Intelligence*. We have now received the materials that he publishes for the application of the *Stanford Revision*, as his scheme is named. It will be remembered that this scheme is a development of the Binet-Simon Tests, and our readers will naturally understand that these tests demand specific apparatus such as is here supplied. It may be well to mention that the "Materials" will be found of little use apart from Prof. Terman's book, but used along with that book they will be found to be of great practical value to the teacher who is willing to give himself a little trouble in order to get a clear working idea of the capacity of his pupils.

The Materials consist of an envelope containing 18 cards of about 6in. by 8in., and a *Record Booklet* of 12 pages each 7½in. by 11in. The cards fall into two groups, the first including various pictures, diagrams, and colour schemes to be used as tests, the second made up of cards containing answers to certain problems, these answers being of different degrees of accuracy, but classified so as to enable the teacher to form a fairly just idea of what may be accepted as satisfactory. As the scheme has been very carefully thought out, these cards are the condensed result of much labour and put it within the teacher's power to compare his results with those of his American fellows. It is worth noting that the *Record Booklet* is marked as "Revised for use in British Schools," though it is difficult to see how American idiom needs to be modified for our use. Colour is spelt with the u, it is true, but this applies to the actual tests themselves, which are not specially modified for British use. Since there is a section for adults, the teacher may test himself and his colleagues, as well as his pupil—which may, after all, prove not the least valuable of the uses to which the cards may be put. In any case we have now available the nearest approach to an objective standard of intelligence, and enterprising teachers will be well advised to avail themselves of it.

## Science.

**INTRODUCTION TO THE STUDY OF SCIENCE :** by Smith and Jewett. (Macmillan and Co. Price 7s. 6d. net.) pp. xii and 620.

The avowed purpose of this book is to introduce boys and girls to a scientific study of the principle features of their environment and to guide them in the development of a scientific habit of mind. The function of scientific instruction in public schools is held to be the initiation of young students into a knowledge of what scientific thought has accomplished for the human race. Emphasis is therefore laid throughout on the fact that it is the use, not the acquisition of knowledge which is educationally worth while.

A full year's course is mapped out, but within that time the topics could hardly be dealt with in the detail indicated. The arrangement is such that selection is easy, and the book will provide sufficient material for an ordinary one year's course based on the special needs of a neighbourhood or class.

One is inclined to predict that a boy or girl who is not proposing to proceed to a systematic and advanced study of a particular science would derive more benefit and find more interest in a course set on these lines than in any of the formal introductory courses in science. To an elementary or continuation school teacher the volume should prove especially valuable.

The chapters on "Artificial Lighting," "The Supply and Uses of Water," "Transportation on Land," "Transportation on Sea," and "Transportation in Air" are especially good, and are a mine of interesting facts, useful tables, and up-to-date notes not to be found in any other single text book.

Of equal interest and value are the chapters on "Plants in Relation to Man," "Insects and Human Health," "Micro-organisms in Relation to Man," and "The Protection of Health." Burbank's work on Artificial Selection, Mendel's Law of Inheritance, and Ross's work on Malaria are well treated in this section.

"Revision" and "Suggestive" questions are given at the end of each chapter, and with the form of some of these British teachers will be inclined to disagree. They are of great suggestive value nevertheless.

H. N. L.

## Hygiene.

**THE PEOPLE'S HEALTH :** by Walter Moore Coleman. (The Macmillan Co., New York. 3s. 6d. net.)

This is an attractive addition to Mr. Coleman's "Practical" series of Health Readers and Textbooks. Though written entirely for American use, the contents are set out in fascinating form, and we would welcome similar books for English schools. All ordinary hygienic topics are treated with an absence of pedantry not commonly remarked in such books, while the countless illustrations on almost every page are as good as anything we have seen.

**FRESH HOPE AND HEALTH FOR HOSPITAL PATIENTS AND INVALIDS :** by Cecilie Muller. (G. Bell and Sons, Ltd. 2s. net.)

Miss Muller has here set out with simple sincerity and considerable charm a few exercises which she has found useful with wounded and disabled soldiers. The directions are simple and clear, and some two dozen excellent photographs aid the verbal descriptions. The little book is so good and written with such attractive modesty that we think Miss Muller might well omit such constant reference to her brother and his "Health System," as well as the testimonials from her patients.

SANTE.

## Geography.

**THE KINGSWAY SERIES :** "Practical Geography," by Robert T. Finch, F.R.G.S. (Evans Bros., Ltd. Price, 3/6 net.)

It is difficult to over-praise this little volume, which merits not only a foremost place amongst text books of practical geography, but inclusion amongst the standard text books of method. A mine of fresh suggestion to the geography specialist and a clever exposition of teaching principles as applied to the solution of practical difficulties encountered in field and classroom, the book is an inspiration to any teacher.

Part I deals with Home Geography; Part II with Graphic Geography. It is pointed out that there is no school subject which stands so much in need of interpretation by direct experience as geography. If pupils are to be successful in picturing lands beyond the seas, the teacher must ensure that the fundamentals of geography have been established by actual personal experience. Imagination is but a conscious dream, and, like all dreams, it is the result of the rearrangement of ideas referable fundamentally to personal experience. This direct experience of geography can only be found successfully in the field, and it is in connection with field work that the author most distinctly reveals himself as a truly great teacher.

He has done well to indicate that the surveying, astronomy, chemistry, and physics exercises which have masqueraded as practical geography should find their proper place in mathematics and science lessons. Their results and interpretations are all that are important in the teaching of geography.

The experienced teacher will be chiefly interested to see how simple apparatus usually used only by advanced students of geography is introduced at an early stage of the work; the young teacher will find most helpful the references to sources of information, statistics, price of apparatus, survey maps, meteorological reports, etc.

Indeed the book is a most useful key to the teaching of geography on modern lines. It is so easy to forget the location of meteorological stations mentioned in the daily weather reports, such as Castle Bay, Roche's Point, Boier Castle, and to hunt them up in an ordinary atlas is hopeless, or momentarily to fail to explain the relation between the new and the old systems of measuring barometric pressure in millibars and inches respectively is disconcerting, but no criterion of a lack of mastery of the subject. To a teacher with this little book at hand such a misfortune could not happen, for key maps and scales are always given.

H. N. LOWE.

**TRANSPORT.—THE MAGIC CARPET OF INDUSTRY :** by J. P. Griffiths. (London: Geo. Philip and Son. 256 pp. 2s. 6d.)

A well written and well illustrated little book dealing with transport in all its phases, old and new. The book should be welcome as an additional reader in the upper classes of elementary schools.

**MACMILLAN'S GEOGRAPHICAL EXERCISE BOOKS :** Africa, with questions by B. C. Wallis, B.Sc. (Macmillan. 1s. 6d. net.)

Mr. Wallis labours at his chosen subject with the prolific industry of an enthusiast but hardly a genius. This exercise book is on familiar lines with "maps to fill in." The questions are numerous but conventional, and the book will keep a scholar busy rather than advance his geographical perception very much.

MUNDRES.

## CLASS BOOKS FOR LOWER FORMS

PUBLISHED AT THE  
*University Tutorial Press.*

**Arithmetic, Preliminary.** By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 2s. With Answers, 2s. 3d.

This Book provides a course of Arithmetic suitable for pupils of ten to fourteen years of age.

"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—SCHOOL GUARDIAN

**Arithmetic, The Primary.** Edited by WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. In Three Parts. Parts I and II, 10d. each. Part III, 1s. 3d.

An Introductory Course of Simple Arithmetical Exercises, covering all the subjects usually taught in schools.

"The examples increase in difficulty by almost imperceptible stages, and they are very suitable for young scholars."—NATURE.

**Chemistry, Preliminary.** By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 2s.

A course for beginners dealing with the leading principles of chemical theory.

"An excellent book; will make a clear understandable foundation for a systematic treatment of chemistry in the higher forms."—

EDUCATIONAL NEWS.

**English Course, Preliminary.** By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School. 2s.

"An excellent first course in English grammar and composition suitable for the lower forms in secondary schools."—SCHOOLMASTER.

**History of England, Preliminary.** By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, B.A., Cambridge Geography Diploma. With Illustrations. 2s. 9d.

"In addition to an outline of political events it tries to give some idea of social and constitutional development and also to connect history with geography. It is clearly written and well illustrated."—SCHOOL WORLD.

**French Course, Preliminary.** By H. J. CHAYTOR, M.A., and H. E. TRUELOVE, B.A. Second Edition. 2s.

"An excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the direct method."—ATHENÆUM.

**Geography, Preliminary.** By E. G. HODGKISON, B.A., F.R.G.S., Assistant Master, Crewe County School. 2s.

A book for beginners, containing Elementary Physical Geography, an outline of the Geography of the World, and the Geography of the British Isles in detail.

"An admirable textbook, clear, direct, and well suited to the needs of pupils for whom it is intended."—LITERARY WORLD.

**Geography of England and Wales, A Preliminary.** By ERNEST YOUNG, B.Sc., F.R.G.S., Head Master, County School, Harrow. 1s. 6d.

This book cannot be used without an atlas, and is generally suitable for the lower forms of schools.

"A capital book, written in simple language, and containing abundant sketch maps of the right kind."—LONDON TEACHER.

**Geometry, Preliminary.** By F. ROSENBERG, M.A., B.Sc. With or without Answers. 2s. 9d.

A book for beginners containing a judicious blending of practical and theoretical work. Insists throughout on reasoning from first principles.

"The book is certainly one to be recommended."—

PREPARATORY SCHOOLS REVIEW.

**Plant and Animal Biology, A First Course in.** By W. S. FURNEAUX. 2s. 9d.

"For beginners this little book should prove a very attractive introduction to the study of plant and animal life."—SCHOOLMASTER.

**Science, Experimental, Preliminary Course of.** By W. M. HOOTON, M.A., M.Sc. 2s.

A detailed course of science training for beginners in accordance with modern ideas.

**Spelling and Punctuation (with Pieces for Dictation).** By HARRY SHOOSMITH, M.A., Modern Language Master, Wandsworth Technical Institute Secondary School. Second Edition. 1s.

"Very seldom have we seen any book which deals so thoroughly with the difficult subject of teaching and learning to spell."—EDUCATIONAL NEWS.

Complete Educational Catalogue, and Full Catalogue of Class Books for Secondary Schools, post free on application.

**University Tutorial Press, Ltd.,**  
High Street, New Oxford Street, LONDON, W.C. 2.

**Mathematics.**

**AN ARITHMETIC FOR PREPARATORY SCHOOLS:** by Trevor Dennis, M.A. (G. Bell and Sons, Ltd. 4s. 6d.)

Few arithmetical textbooks of recent years have given us more pleasure than this one. Aided by the Headmaster's Syllabus for the Common Examination for Entrance to Public Schools, Mr. Dennis has discarded with courageous and ruthless hands all the antiquated lumber which disfigures the older textbooks. The examples are particularly good and new—it is difficult indeed to find many of the traditional type. Explanatory matter and theoretical discussions are reduced to a minimum, while the extraordinary clarity of the type used enhances the value of the book. If fault may be found, it is in the wording of the title "Preparatory Schools," for we should like to see the book in use in every type of school, particularly elementary schools.

**A MANUAL OF TRIGONOMETRY FOR THE USE OF YOUNG SAILORS AND NAVAL OFFICERS:** by Richard Buck. Fifth Edition. (Griffin and Co., Ltd. 3s. 6d.)

This is a book at which no doubt the academic teacher will look askance, but which is most attractive in its naval "get there" directness. It deals with the practical essentials of both plane and spherical trigonometry. Reversing the conventional order, it gives formulæ and exercises first and proofs later. Though intended primarily for H.M.S. Worcester cadets, the examples are of such a nature that every mathematical teacher might well include this little book among his source books.

**THE INDUCTIVE ARITHMETIC:** by E. Sankey. Complete in Seven Books, with corresponding Teachers' Books. (London: Edwin Arnold)

Sets of little class-books in arithmetic for elementary schools, as issued by the various publishers, do not differ much in matter or merit. The compilers are always obviously constricted by the necessity of chopping their material into so many yearly fragments, while the incubus of ancient codal tradition is still over all. Thus we find as usual Weights and Measures in Book IV; "Proportion" in Book V; and "Interest" in Book VI. For those teachers now looking out for a new "set," Mr. Sankey's "Inductive" Arithmetics, though containing no special features, will probably suit as well as any others. ABACUS.

**Music.**

**THE LAUREATE SONG BOOK, PART II.** (London, Edward Arnold. Price 2s.)

This second book of British Songs for Boys and Girls, School Singing Classes, etc., "adapted and fitted with new settings," by Thomas F. Dunhill, is a welcome addition to the very many collections of school songs already published. It contains thirty compositions—many of them well known favourites, and some other numbers little known. The editor has supplied new and interesting accompaniments which will certainly find more favour among musicians than many previously used. Greater care than usual has been bestowed upon expression, phrasing, and general interpretation. The book should find a ready sale among teachers of vocal music and their students.

**TWELVE SONGS OF THE BRITISH ISLES:** for Choirs without tenors. (London, Edward Arnold. 1s. 6d.)

While one deprecates, as a rule, the harmonising of songs which in most cases were originally composed as melodies and intended to be sung as melodies rather than as part-songs, it is frequently a delight to vocalists to come across a good selection of popular songs well harmonised, and arranged as duets, trios, or quartets. Mr. H. J. Taylor, F.R.C.O., who has arranged these twelve trios, has been happy in his selection of melodies and skilful in his treatment of them. All the twelve are written for three voices (soprano, contralto and bass)—that is, for choirs without tenors. We can fancy almost a *rush* for these, for alas I even now though the war is over many choirs are "without tenors." If sung as indicated by the compiler these trios should give delight to performers and listeners.

A. G.

**Chess.**

**CHAROUSEK'S GAMES OF CHESS:** by Philip W. Sergeant. (G. Bell and Sons, Ltd. 7s. 6d. net).

Mr. Sergeant has collected 146 games of Rudolf Charousek and presented them in a handy volume in five sections. The tournament games are the most important and valuable, and the

correspondence and consultation games are worthy of study by those who aspire to become first-class players. In addition there are match games, blindfold, simultaneous, odds and casual games, making a wonderful variety in respect to both openings and play, the whole being skilfully annotated.

If the study of the games of a most brilliant master result in front rank play here is the necessary book. It is worthy of note that Charousek's success was itself founded upon book knowledge.

A diagram occurs on every other page, while the biography and index make the book interesting and useful.

E. A. HOLFORD.

**CHESS OPENINGS ILLUSTRATED: THE CENTRE COUNTER:** by J. Du Mont. (G. Bell and Sons, Ltd. 2s. 6d. net.)

The object of the series of Chess Openings Illustrated, of which this is the first volume, is to carry the game further than the opening and to show the result of various lines of attack and defence.

The Centre Counter has been chosen first for investigation owing to its comparative simplicity, and it has the advantage that if White play 1 P—K4, Black can answer 1 P—Q4 and thus, whether a novice or expert, secure a game on the lines of his study.

Probably in matches and tournaments more deciding weak moves are made in the middle than in the opening or end game, so that a reference book is helpful to the player who wishes to improve.

The introduction is particularly good; the arrangement of the various defences in groups with illustrative games at the end is satisfactory, helping to relieve the monotony of wading through many variations. Attention is drawn to traps for the unwary. There are 70 diagrams and the notes are very good.

E. A. HOLFORD.

**General.**

**THE AUSTRALIAN ARMY MEDICAL CORPS IN EGYPT:** An illustrated and detailed account of the early organisation and work of the Australian Medical Unit in 1914-15: by Lt.-Col. Sir J. W. Barrett, C.M.G., M.D., M.S., F.R.C.S. Eng., and Lt. P. E. Deane, A.A.M.C. pp. xiv. + 259, with 37 illustrations. (H. K. Lewis and Co., London, W.C. 1. 12/6 net.)

This book gives an excellent account of the remarkable achievements of the A.A.M.C. in the early days of the war. There is the usual story of unpreparedness and of hasty improvisations, but amid all we realise the triumph of the Australian Medical Service in the face of unprecedented demands. We wish the authors had dealt a little more fully with the great rush of wounded following the opening of the Dardanelles campaign, but the statistics alone will serve to correct common misapprehensions on the subject. Numerous excellent photographs add to the value of the book.

**THE WAR WORK OF THE Y.M.C.A. IN EGYPT:** by Sir J. W. Barrett, K.B.E., C.B., C.M.C., F.R.C.S.; with a preface by Sir E. H. Allenby. pp. xx. + 212, 23 Plates, 3 Maps. (10s. 6d. net.)

The full story of the work of the Y.M.C.A. in the War has yet to be told, but Sir J. W. Barrett here gives us an excellent instalment. General Allenby's preface pays a cordial tribute to the work of this world-wide organisation. The compiler might perhaps have dispensed with the first two or three chapters dealing with the history of the movement. This would have given him more space to deal with his actual subject, but in sixteen chapters he gives us a full survey including Egypt, Gallipoli, and Palestine. The photographs deal chiefly with buildings and personnel.

**SONGS FROM A WATCH TOWER:** by Richard Hayes McCartney. (Fleming H. Revell Company, Chicago and New York.)

Mr. McCartney is a prolific versifier to judge from these crowded pages. Yet though the book is styled "Songs," we fail to find any lyrics of real beauty. The author tries various metres, and is seldom happy in any of them. The diction is stilted, the verses are cramped, and the stanzas at times are incoherent. The author's opinions, too, appear to be of newspaper manufacture, as seen in the poem on "Lansdowne," while the War is a very serious obsession to him as noted in the bathos of "A million cripples in Europe" and "A German Mother." The Germans are plentifully belaboured with words and imprecations, but in spite of all, we do not feel that this volume will achieve lasting fame.

# TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, 29th February, 1912.)

---

## OFFICIAL LIST OF REGISTERED TEACHERS

---

The Statutory duty of the Council is to frame and keep a Register of Teachers, and a list of those registered under the conditions prescribed by the Council will be published from time to time. The first list was issued in 1917, and the second one is now in course of preparation.

In addition to its statutory duty, the Council has acted in co-operation with the Board of Education in many important matters affecting the interests of Teachers.

Up to and including the 20th of September, 1919, the number of applications for admission to the Register was 30,455. All qualified Teachers who have not already registered should write at once to :—

THE SECRETARY,  
TEACHERS REGISTRATION COUNCIL,

47, BEDFORD SQUARE,

LONDON, W.C. 1.

**GREEK LEADERS:** by Leslie White Hopkinson, under the Editorship of Wm. Scott Ferguson. (London: Constable and Co., Ltd. 5s. net.)

This book appears to be written primarily for students of ancient history in American High Schools. The compiler includes eleven famous Greeks from Solon to Aratus. The "lives" would appear to be chiefly Plutarch modernised. Readers might wonder at the omission of the most famous names of Plato and Aristotle, but possibly Mr. Hopkinson thinks these worthy of separate treatment. On the whole the compiler has produced a successful book. The biographies are well written, and some, such as that of Alexander the Great, will prove fascinating to young students. The book can be recommended as an "additional" reader for the "classical" side of the English public and secondary schools. LECTOR.

**THE ESSAYS OF HAZLITT.** Selected and edited by Arthur Beatty, University of Wisconsin. (George G. Harrop & Co. 3s. net.)

The compiler has produced an attractive and well-arranged edition, which will appeal alike to the general reader and to the student. The essays are grouped under:

- I. Autobiography and Reminiscence.
- II. Philosophy and Reflection.
- III. The Art of Prose.
- IV. Criticism.

and are fairly representative of this frank writer and strong personality. The book contains a good Bibliography of Hazlitt, in addition to the usual introduction and notes. FELIX.

**BRITANNIA'S PAGEANT OF PEACE: I.** A patriotic sketch by Gladys Davidson, 1s. 6d. net.

**II. THE VISION OF A NEW WORLD:** a short peace pageant by Rose I. Patry. 1s. 3d. net. Samuel French, Ltd.

These little plays will, we suppose, enjoy but a brief and transitory existence, and, frankly, we think it is as much as they deserve. Of the two we much prefer Miss Davidson's, as being more tuneful, poetical, and more generally suited to children's performances. The second—Miss Patry's vision—is disappointing in conception and in language. Written mostly in somewhat ambitious prose it is common-place in sentiment and expression. Its chief merit is that it is mercifully short. ARIEL.

**THE STORY OF THE ENGLISH TOWN:** (a) Leeds, by J. S. Fletcher; (b) Sheffield, by J. S. Fletcher. (S.P.C.K. 3s. 6d. net, each.)

We confess to some disappointment at the two little volumes before us. Frankly they lack "flair," enthusiasm and modernity. Conscientiously compiled records though they may be, they just fail to "grip" the reader, and hardly indicate the present importance of these great Yorkshire towns. We wish Mr. Fletcher had given us less of the places as they *have been* and more of them as they *are and hope to be*. As the books stand, they evidence chiefly the stolidity and stodge of some archæologists and historians. We wish the author had a lighter touch and could strike the mean between the heaviness of a treatise and the airy flippancy of some guide books. X.

**ENGLISH LITERATURE FOR SECONDARY SCHOOLS.** The most delectable History of Reynard the Fox. Edited by H. A. Treble, M.A. (Macmillan & Co., Ltd.)

We congratulate Mr. Treble on this most fascinating addition to a well-known series. This charming folk-tale should be read by all scholars, elementary and secondary. The editor has based his text on the excellent version in the Cranford Edition by J. Jacobs. The book is well illustrated and contains sufficient work for one term; it is complete with introduction, notes, glossary, exercises for composition, passages for repetition, and helps to further study. PRECEPTOR.

**STUDIES IN LITERATURE:** an aid to Literary Appreciation and Composition, by F. H. Pritchard. (George G. Harrop & Co. 2s. 6d. net.)

This book does not differ much from many contemporaries of the same class. It proceeds on the "intensive" study of a series of short extracts. To each extract are appended exercises and hints for comparative reading. We are, however, not certain that the perusal of a short extract from an author, however intensive the study may be, can give any real knowledge of the particular author's style or workmanship. We have a suspicion too that the choice of the extracts has been guided by the ease with which a corresponding "comparative reading" list could be compiled. Thus we do not consider "The Last Fight" typical of Tennyson, nor "A Railway Journey" repre-

sentative of Stevenson, while "Mr. Montague Tigg" is a caricature of Dickens in a double sense. Among those teachers who prefer extracts to originals and ready-made exercises on each extract, the book may find a place. Certainly it is as good as most of its type. SCRUTATOR.

### Cambridge Local Examinations.

The Class Lists of the Cambridge Local Examinations held in July have been published showing that the total number of candidates entered was 7,374, exclusive of 1,272 who were examined at Colonial centres. 106 candidates were entered for the Higher School Certificate Examination, which was held for the second time on this occasion; 71 of these were successful. Distinctions were gained by C. M. Isaacs, Private Study (Greek); M. E. Cousens, Burton-on-Trent Girls' High School (French); W. W. Price, Stourbridge Grammar School (English); W. M. Osborne, Dartford County School for Girls (English); F. M. Britton, Colston's School, Bristol (Mathematics); C. W. Tod, Burton-on-Trent Grammar School (Mathematics); E. Lyne, Kendal Grammar School (Mathematics); A. Fletcher, Lincoln School (Mathematics); R. M. Gale, Maidenhead County Boys' School (Mathematics); H. L. Birbeck, Orme Boys' School, Newcastle-under-Lyme (Mathematics); G. J. C. Vineall, Southampton Grammar School (Mathematics); J. S. Rowley and C. H. Wasdell, Stourbridge Grammar School (Mathematics); T. C. Grice, Thetford Grammar School (Mathematics); W. A. P. Fisher, Bournemouth School (Physics and Chemistry). The Exhibitions at St. John's College have been awarded to W. A. P. Fisher (Bournemouth School) and H. L. Birbeck (Orme's School, Newcastle-under-Lyme). In the Senior Examination 1,363 boys and 1,702 girls passed, first-class honours being gained by 142 boys and 44 girls; exemption from the whole of the previous Examination was gained by 335 boys and 227 girls. Of the Junior candidates 852 boys and 528 girls satisfied the Examiners, 72 boys and 7 girls being placed in the First Class. In the Preliminary Examination 232 boys and 288 girls passed.

It is hoped that the Class Lists for the Colonial Centres will be issued at the end of the month.

### Workers' Educational Association.—Annual Report.

The Sixteenth Annual Report of the Workers' Educational Association, which has reached us, shows that, despite the stresses and strains of the past five years, the Association has not only held its ground but has steadily extended its sphere of operations.

It is to-day a world-wide Federation, and has in Great Britain alone 10 full districts, 219 branches, and 17,136 individual members. Tutorial Classes held under its auspices last session amounted to 156, while the number of One Year Classes, Study Circles, and Short Courses has increased greatly.

An important feature of the Association's work is the Summer School, while the Week-end Schools are also growing in number.

The work of the W.E.A. is still heavily hampered by lack of funds. Steps are being taken to build up an Endowment Fund, and it is hoped that a ready response to this will help to place the Association on a basis worthy of its great usefulness. The demand for Adult Education was never greater than to-day. The need for helpers both financially and as Tutors and Organisers is correspondingly large.

Overseas the W.E.A. is established in every State in Australia, in New Zealand, South Africa, and Canada. In America and in Europe people imbued with the W.E.A. ideas and catching its enthusiasm are hard at work founding similar organisations.

The Annual Convention of the W.E.A. is to be held at Nottingham on the 17th and 18th October. On the Friday evening a great National Demonstration is to be held in the Albert Hall at 7.30, at which the principal speakers are to be The Right Hon. H. A. L. Fisher (President of the Board of Education) and Mr. Frank Hodges (Secretary of the Miners' Federation of Great Britain). The Mayor, representatives of the University College, and a large number of local organisations will attend.

On the Saturday, following a meeting of the National Council of the W.E.A., the Convention will be held in the University College, Shakespear Street. Papers will be read and discussed. The speakers and subjects are as under:—

Mr. Arthur Greenwood (Vice-President W.E.A.)

"The relation of the Board of Education, the Universities, and the L.E.A.s, to Adult Education."

Mr. Reuben George (Chairman, Western District W.E.A.)

"Some Unconventional Approaches to Adult Education."

# Study by the best and shortest methods.

In whatever course of study you are interested the Correspondence Training of the Tutorial College will direct you by carefully graduated steps to certain success.

The Correspondence Tuition of the Tutorial College has been developed to the highest state of efficiency, both as a method of teaching and as a means of conveying ready understanding to the student.

The College knows and supplies exactly what guidance and information the student needs, and its exercises are carefully graded for easy assimilation and rapid acquirement.

The courses are compiled from unequalled sources of information and specialised knowledge, the coaching being thoroughly earnest and individual from start to finish. The "Tutorial" system is designed to make a success of every willing student, and those who train under it have their studies directed by the best professional and teaching talent in Britain.

Because it is neither based upon, nor like any other method of training, the Tutorial College can *guarantee* the efficiency of its correspondence training, and reminds you that it provides *for you* a far better chance of success than any other training institution or system.

To their Majesties the King and Queen and H.M. Queen Alexandra,

## WINSOR & NEWTON, Prepared Water Colours

IN

WHOLE and HALF CAKES, WHOLE, HALF, and  
QUARTER PANS,  
and WHOLE, HALF, and LARGE TUBES.

Quarter Pans of Winsor and Newton's Artists' Water Colours are of the same outside dimensions as the Half Pans. They may, therefore, be used in Winsor and Newton's range of Half Pan Japanned Boxes.

The advantages of habituating the Student at the outset of his career to the use of the BEST materials are so obvious that no attention need be drawn to them.

Messrs. Winsor and Newton's Artists' Water Colours are necessarily more expensive than those usually manufactured for School use, but as, owing to their superior strength, a small quantity yields approximately the same amount of colour surface as the larger pans of Water Colours generally sold for Students' use, the expense in both cases is much the same.

The special attention of Teachers and the public is, therefore, invited to these Quarter Pans of Colour, which, costing practically the same, provide the Student with a superior article.

Full detailed catalogue may be obtained from any of the leading Artists' Colourmen throughout the Country, or from 39, Rathbone Place, London, W. 1.

Established nearly a Century.

## MODERN LANGUAGES.

### SPANISH.

#### PRIMERAS LECCIONES DE ESPANOL.

By C. MARCIAL DORADO. 307 pages. Illustrated. 4s. net

A first course in Spanish which seeks to simplify and to render as attractive as possible the learning of the language. Every lesson is short and contains only the words in common use; tedious rules have been avoided, but there are brief explanations with sufficient exercises to teach the student the essential points of grammar. The material for oral work, reading, etc., is of great variety, and includes stories and anecdotes from Spanish folklore, rhymes and riddles, songs with their musical accompaniments, and games. The book contains some 30 black and white illustrations, which form excellent bases for conversation, and a complete vocabulary.

"Senorita Dorado's elementary treatise is a sheer delight."  
—*Journal of Education and School World.*

#### CUBA Y LAS COSTUMBRES CUBANAS.

By FRANK C. EWART. 157 pages. Illustrated. (In preparation.)

This reader consists of 14 short sketches describing Cuba, its capital Havana, and the customs of its people. At the end of the book, which is well illustrated from photographs, are questions for conversation, exercises designed primarily for the purpose of illustrating idiomatic expressions, notes explaining geographical and historical allusions, as well as grammatical difficulties encountered in the text, and a complete vocabulary containing not only all the words which are alike in both languages, but all irregular verb forms used, including radical changing verbs, thus making it possible to use the text early in the student's course.

#### ESPANA PINTORESCA.

By C. MARCIAL DORADO. 332 pages. Illustrated. 4s. net.

A reading book for the student who has done some preliminary work in Spanish. Its aim is to arouse an interest in Spain, its people, and its customs, and in this way to provide a background for the study of the language. In addition to vivid descriptions of some representative towns and of their social life, legends, songs with their musical accompaniments, poems, folklore stories, selections from well-known Castilian writers, and a short play have been included, and the result of this medley is a book which breathes the atmosphere of Spain. At the end of the book are a questionnaire on each extract, exercises for translation into Spanish based on the text, notes, and a complete vocabulary.

"An attractive class book."—*Scottish Educational Journal.*

#### A FIRST READER IN SPANISH.

By RUDOLPH SCHEVILL. 181 pages. Illustrated. 3s. net.

The selections given in this book are varied, interesting, carefully arranged, and graduated in order of difficulty. Part I contains short legends and fables, a few simple poems, and a number of familiar Spanish proverbs. Part II consists mainly of dialogues designed to acquaint the student with everyday expressions and idioms. Part III consists of extracts from Spanish novels and histories.

"... A book which can be used by students with great interest and profit, and those who have mastered it will have at their command a large vocabulary, sufficient for most purposes."—*Scottish Educational Journal.*

### ITALIAN.

#### AN ITALIAN GRAMMAR.

By R. S. PHELPS. 328 pages. 5s. 6d. net.

A book which serves the double purpose of a lesson book for beginners and a grammar for reference purposes in more advanced work. The first twenty-seven lessons equip the student to read easy Italian narrative. The early part of the book is particularly easy, the difficult subjects being broken up and studied in sections, but before the book is finished all the essentials have been treated thoroughly.

#### DUE COMMEDIE MODERNE:

O Bere O Affogare. By LEO DI CASTELNOVO.

Lumie di Sicilia. By LUIGI PIRANDELLO.

Edited with Notes and Vocabulary by EMILIO GOGGIO. 130 pages. 2s. 3d. net.

These two comedies of present-day Italy contain many of the simple colloquial expressions necessary for any real acquaintance with the language. The editorial matter consists of brief biographical sketches of the two authors, notes, and a vocabulary.

### FRENCH.

#### LE FRANCAIS POUR TOUS

par la méthode directe. By NOELIA DUBRULE. 12mo. Cloth. Illustrated. 264 pages. 4s. net.

An introductory course in French, the object of which is to help the pupil to speak fluently, clearly, and distinctly, to give him the ability to read small news items in French newspapers, to write simple French letters, and to acquaint him with the fundamentals of French grammar. The exercises for oral work are numerous, varied, and interesting; as an aid to the acquirement of a vocabulary there are many interesting *jeux de memoire*; and *chansons* with their accompaniments form an integral part of the book.

"One of the best books on the direct method we have seen."—*Highway.*

#### DE L'UNIVERSALITÉ DE LA LANGUE

FRANCAISE. By ANTOINE RIVAROL. Edited by W. W. COMFORT. vi.+62 pages. (In preparation.)

This reprint of the successful thesis submitted in competition for the prize offered by the Berlin Academy in 1783 in answer to the questions, "What has made French a Universal Tongue?" "Why does it deserve this Fame?" "May it be expected to preserve it?" forms a logical introduction to the study of French literature. The text is distinguished by that clarity of style and small vocabulary of general words which marked the best writings of the 18th Century, and is well adapted for study in the upper forms of Secondary Schools as well as by students of University standing.

A Complete List of Modern Language Texts will be forwarded post free on application.

## THE TEACHERS REGISTRATION COUNCIL.

Representative of the Teaching Profession.  
Constituted by Order in Council  
29th Feb., 1912.

The Council maintains an Official Register of Teachers who have been accepted for admission under the Conditions of Registration.

The Register is open to qualified teachers in every branch, and until the end of 1920 experience under approved conditions is the sole qualification required. After that date the conditions will become more stringent.

Particulars and Forms of Application may be obtained from

THE SECRETARY,  
Teachers Registration Council,  
47, Bedford Square,  
London, W.C. 1.

## THE COLLEGE OF PRECEPTORS.

Incorporated by Royal Charter.

BLOOMSBURY SQUARE, LONDON, W.C. 1.

### MEMBERS' MEETING.

A Meeting of Members and their friends will take place on Friday, the 21st of November, at 6 p.m. The chair will be taken by SIR JOHN McCLURE, and Miss L. E. DE RUSSETTE will deliver a Lecture on "Moods in Music, with special reference to the Use of Music in the Training of Children."

### NATIONAL SERVICE RECORD.

A record is being prepared of services rendered in connexion with the war by Members of the College and Holders of the College Diplomas. For this purpose the Secretary will be glad to receive information with regard to such services, whether rendered in the fighting forces or in the auxiliary forces—e.g., Red Cross organisations, Special Police, Women's War organisations, or in other ways. He will also be glad to receive from Members and Diploma Holders any proposals which their experience may have suggested for improvements in methods or organisation, especially in relation to education and its use as a training for National Service.

## THIS ISSUE CONTAINS :

Essays on Public Schools & the Railway Strike, The School Piano, and The Play Way in Lancashire; Blue Book Summary on Qualifying Service for Pensions, Notes and Comments, and a General Survey of the month.

## THE INCORPORATED SOCIETY OF MUSICIANS.

Founded 1882.

Incorporated 1892.

### OBJECTS OF THE SOCIETY.

The objects for which the Society is established are the promotion of whatever may tend to the elevation of the status, and the improvement of the qualifications, of all Members of the Musical Profession, or may aid the musical education of the people.

### ADVANTAGE OF MEMBERSHIP.

A Benevolent Fund for Members, the Regulations for which have purposely been made as wide as possible in order to meet the many and very varying contingencies which arise from time to time.

An Orphan Fund for the children of musicians, which is open to the dependents of all musicians, whether their parents were members of the Society or not.

Legal advice on all professional matters: Income Tax Claims; Copyright; The Recovery of Fees, &c.

Registers open to members of "Vacant Appointments" and "Engagements," and for the transfer from member to member of pupils moving to new districts.

### LOCAL EXAMINATIONS IN MUSIC

The examinations of the Society, established in 1884, are carefully arranged in a systematic series of Progressive Grades, embracing a complete course of musical study, and constitute a most valuable guide for Teachers in recording the progress of their pupil.

Full particulars may be obtained upon application to the GENERAL SECRETARY, 19, BERNERS STREET, W. 1

## MRS. CURWEN'S PIANO- FORTE METHOD.

ALSO EAR TRAINING & SIGHT SINGING  
FROM SOL-FA AND STAFF.

Holiday Classes for Music Teachers, held daily, January 1st to 7th, 1920, at the Wigmore Hall Studios, Wigmore Street, W. 1, taught by Miss SCOTT GARDNER and Miss MARGARET KNAGGS, A.R.C.M.

An interview may be had by appointment.

## JOINT SCHOLASTIC AGENCY, Ltd.,

9, Brunswick Square, W.C. 1.

This Agency is under the direction of a Committee representing the following leading Educational Associations:—

**HEAD MASTERS' CONFERENCE.  
INCORPORATED ASSOCIATION OF HEAD MASTERS.  
COLLEGE OF PRECEPTORS.  
TEACHERS' GUILD.**

**ASSOCIATION OF ASSISTANT MASTERS.**

REGISTRAR: MR. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

Interviews by appointment from 12 noon to 1-30 p.m., and from 3 p.m. to 5 p.m.; on Saturdays, from 11 a.m. to 12-30 p.m.

**A PROSPECTUS will be sent on application.**

## JOINT AGENCY for WOMEN TEACHERS OAKLEY HOUSE,

14, 16, and 18, BLOOMSBURY STREET, LONDON, W.C. 1.

Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools Association.

THIS AGENCY has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

No Registration Fees are charged to members of the above Associations, and their Commissions are reduced.

Hours for Interviews:

11-30 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11-30 a.m. to 1 p.m., and 2 to 3 p.m.

When possible, special appointments should be arranged.

REGISTRAR: MISS ALICE M. FOUNTAIN.

# SCHOLASTIC APPOINTMENTS

University Men and Women seeking scholastic appointments should apply to

## **Truman & Knightley** SCHOLASTIC AGENTS LTD

who introduce ASSISTANT MASTERS AND MISTRESSES to the majority of the leading Public and Private Schools at home and abroad.

*Through this Agency, well educated gentlemen with Higher Local and other good Certificates, interested in children and in teaching, can find congenial work in good high-class Private Schools, where the hours are not excessive, conditions pleasant, and the holidays are long. Salaries range from £50 to £100 or more per annum, with board and residence, according to age, qualifications, and experience. There are also many vacancies for Student and Junior Mistresses at salaries of from £30 to £50 per annum with board and residence.*

There is a separate department for

### **LADY MATRONS and HOUSEKEEPERS**

for Schools.

No charge for registration.

::

Moderate commission.

#### **SCHOOLS TRANSFER DEPARTMENT.**

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

Offices: **158-162 OXFORD ST., LONDON, W. 1**

Telegrams: "TUTORESS, PHONE, LONDON."

Telephone: MUSEUM 1136.

*It needs no shake*

**See Why?**

The nib, rising from the ink barrel is always wet. No dried matter encrusts and clogs it.

*Not a splutter in a penful*

**IT'S ALL-BRITISH.**

*It needs no filler*

**See Why?**

Its extra large ink barrel presents a mechanism-free opening into which ink can be poured easily from a bottle

*Not a spill in a fill*

**You have probably tried many Pens which have tried you. Why not end your trials and buy a "Whytwarth" ?**

"The pen with the disappearing nib" has none of the drawbacks that make you suspicious of ordinary fountain pens. Science and brain have in it produced the perfect writing instrument. The ink cannot leak or evaporate, it is locked in the pen. The nib is *always* wet and ready to write. The ink-barrel is easy to the hand, holds a lot of ink, and can be filled easily without a filler.

**JOHN Whytwarth**  
*Scientific Unleakable*

**"The Pen with the Disappearing Nib."**

**ENTIRELY BRITISH.**

*Of all Stationers.*

**JOHN WHYTWARTH LD.,**  
14, Ivy Lane, Paternoster Row,  
LONDON, E.C. 4.

*Its nib must suit you*

**See Why?**

The 14-carat gold nib is supplied exactly, not merely "near enough," to the pattern of your favourite steel nib.

*Not a scratch in a screeed*

From  
10/6 to  
£2 . 2 . 0

*It cannot leak*

**See Why?**

The ink is "locked" however the Pen is carried. "Locked" ink will not evaporate either, whatever the climate.

*Not a grumble in a year.*

# VACANCIES IN SCHOOLS

## IMPORTANT.

So many Schools at present being full, some with long waiting lists, it will be an assistance to us, in dealing with the large number of inquiries daily received, if Principals likely to have vacancies for the next two terms will notify us as early as possible.

---

143, CANNON STREET, LONDON, E.C. 4. Telephone: Central 5053

# CAMBRIDGE UNIVERSITY PRESS

## RECENT PUBLICATIONS

### Problems of Cosmogony and Stellar Dynamics.

Being an Essay to which the Adams Prize of the University of Cambridge for the Year 1917 was adjudged. By J. H. JEANS, M.A., F.R.S. Large royal 8vo. With five plates 21s net.

The present essay is primarily an attempt to follow up a line of research initiated by Laplace and Maclaurin, and extended in various directions by Roche, Lord Kelvin, Jacobi, Poincaré, and Sir G. Darwin. The main object is to build a framework of absolute mathematical truth, and the backbone of the structure is the theoretical investigation into the behaviour of rotating masses. The book contains also an account of general dynamical theory, and of the researches of Darwin, Poincaré, and others, so far as they relate to the main problem in hand.

### A Dictionary of the Flowering Plants and Ferns.

By J. C. WILLIS, F.R.S. Fourth edition, revised and re-written. Crown 8vo. 20s net. Cambridge Biological Series.

"A volume which it would be impossible to commend too warmly. . . . It should find a place in every botanical library."—THE JOURNAL OF BOTANY.

### Fossil Plants.

A Textbook for Students of Botany and Geology. By A. C. SEWARD, F.R.S. Volume IV (Ginkgoales, Coniferales, Gnetales). Demy 8vo. With 190 illustrations. 21s net. Cambridge Biological Series.

"This fourth volume successfully completes a monumental treatise already highly valued. . . . One of the most valuable and important descriptive text-books of palaeobotany yet given to the world."—THE SCOTSMAN.

### Petrology for Students.

An Introduction to the Study of Rocks under the Microscope. By ALFRED HARKER, LL.D., F.R.S., F.G.S. Fifth edition revised. Crown 8vo. With 100 text figures. 8s 6d net. Cambridge Geological Series.

### Notes on Magnetism.

For the use of Students of Electrical Engineering. By C. G. LAMB, M.A. Crown 8vo. Paper covers. 5s net.

Contains an outline of such portions of magnetic theory as are required by a student in order to read the ordinary technical text-books with intelligence.

### An Elementary Course of Infinitesimal Calculus.

By H. LAMB, LL.D., Sc.D., F.R.S. Demy 8vo. 20s net. "The third edition of Prof. Lamb's important treatise in which general principles are amply illustrated by helpful examples on almost every page."—THE TIMES.

### Plane Trigonometry for Secondary Schools.

By C. DAVISON, Sc.D. Crown 8vo. 6s 6d net.

The first part of this book (Chapters I-XVI) includes the ordinary course of Elementary Trigonometry, though some sections are treated rather more fully than usual, especially graphs in the fourth chapter and the solution of equilaterals in the eighth. The second part (Chapters XVII-XX) deals with inequalities, approximations and errors, de Moivre's theorem and series.

### The Study of the Weather.

By E. H. CHAPMAN, M.A., B.Sc. Large crown 8vo. With 56 illustrations. 3s 6d net. Cambridge Nature Study Series.

A series of exercises and problems on weather study, arranged with a certain adaptability to all times and seasons, and always bearing in mind the pressing importance of observing what you can and where you can. It is hoped that the book will be acceptable as an introduction to the study of Modern Meteorology.

### The North Riding of Yorkshire.

By CAPT. W. J. WESTON, M.A., B.Sc. Crown 8vo. With 59 illustrations and three maps. 2s net. Cambridge County Geographies.

"An excellent introduction to the history, geology, industries, and other main features of the life of the administrative county."—THE TIMES.

"Like the other volumes of the series it is admirably calculated to stimulate interest, give instruction, and foster county pride."—THE FIELD.

### The Purpose of Education.

An Examination of the Education Problem in the Light of Recent Psychological Research. By ST GEORGE LANE FOX PITT. Crown 8vo. 7s 6d net.

A new impression of the second edition, bound in cloth. The volume contains a Preface by Professor EMILE BOUTROUX, a Reply to Critics, and an additional chapter, Perfection as the Ideal and Lessons of the War.

"With the main thesis advocated we are in hearty agreement, and the presentment we have found stimulating in no ordinary degree. The perusal of the book could hardly fail to be profitable to any thoughtful man or woman."—THE TIMES.

### Seventeenth Century Life in the Country Parish.

With special reference to Local Government. By ELEANOR TROTTER, M.A. Demy 8vo. With a map. 10s net.

The author's object is to show how the ordinary business of government—the maintenance of justice and the preservation of law and order—was carried on during that most troubled period in the life of our race—the Seventeenth Century—and to show the working of the Parish, the powers and duties of its officials, their interaction and relation to the supervisory jurisdiction of the Church and the local Magistracy.

### Britain and Greater Britain in the Nineteenth Century.

By E. A. HUGHES, M.A. Crown 8vo. 5s net.

The author has aimed at writing a book which will be suitable not only to the upper forms of schools, but to the general public; it is not merely a text-book for examination candidates. Special attention is given to colonial history, which occupies nearly one-third of the volume.

### Cambridge Readings in Literature.

A Series of Anthologies from Homer to Masfield, illustrated with reproductions of pictures by great masters, from Botticelli to William Orpen. Edited by GEORGE SAMPSON. In five books. Crown 8vo. School edition, cloth flush. Books I, II, and III, 3s 6d net each; Books IV and V, 4s net each.

"We have never seen more delightful books of their kind, and we predict that they will receive the most cordial of welcomes from teachers of English."—THE SCOTTISH EDUCATIONAL JOURNAL.

### The Measures of the Poets.

A new system of English prosody. By M. A. BAYFIELD, M.A., formerly Head Master of Eastbourne College. Crown 8vo. 5s net.

The purpose of this book is to assist both students and lovers of poetry in general towards such a complete enjoyment of the beauty and music of English verse as can only be attained through a clear comprehension of its metrical framework. The author proposes to substitute for the traditional prosody based on the iambic a new system built up on the trochaic base.

### Thucydides, Book IV, Chapters I—XLI

(Pylus and Sphacteria). Edited by J. H. E. CREES, D.Lit., and J. C. WORDSWORTH, B.A. Extra fcap. 8vo. With map, notes, and vocabulary. 2s 6d net. Cambridge Elementary Classics.

This edition has been prepared for those who have not long been studying Greek and who have reached the stage of the "First School Examination." A vocabulary has therefore been added.

### Plautus: Menaechmi.

Edited, with introduction and notes, by CLARA M. KNIGHT, D.Lit. Extra fcap. 8vo. 5s net. Pitt Press Series.

The "Menaechmi" has a claim to be read early in the student's study of Plautus, not only on account of its literary merit and the imitations of it in modern literature, but also because the language is on the whole easier than in some other plays. With this in view the editor has treated the idiom, where it differs from Ciceronian Latin, more fully than would be necessary for students who have already read several plays of Plautus.

### Key to Exercises on Rules for Latin Prose.

By T. C. WEATHERHEAD, M.A. Crown 8vo. 7s 6d net

A complete Educational Catalogue will be sent post free on application.

Fetter Lane, London, E.C. 4: C. F. Clay, Manager

## NOTES AND COMMENTS.

### American Rhodes Scholars.

In the September number of "The Atlantic Monthly" Mr. G. R. Parkin discusses the quality of the material sent to Oxford from America under the terms of the Rhodes bequest, a trust which Mr. Parkin himself helps to administer. After fourteen years' working of the scheme and a close observation of its progress, Mr. Parkin says candidly that it is not bringing to Oxford the best brains of young America. In thirteen years some two thousand candidates offered themselves, an average of over 150 a year, for the thirty-two scholarships awarded annually. Of these about one-half failed to pass a qualifying examination of the standard of Responsions. It is well known, of course, that the selection does not depend on examinations success alone. Athletic prowess, character, power of leadership, and the indeterminate quality known as manliness, all come into assessment. Yet Mr. Parkin declares that "of all the men sent from America not more than one-third were, in ability and preparation, in a position to compete with the best-trained men from English public schools." It is suggested that this has a bad effect in two directions. Oxford forms a wrong and unduly low opinion of young America, and when second or third rate men go back to their homes across the Atlantic they give rise to a wrong and unduly low opinion of Oxford. Thus the aim which Cecil Rhodes had in view is far from being accomplished. So at least Mr. Parkin tells us.

### Almsgiving and Scholarships.

Dr. Parkin suggests some reasons for the failure of the Rhodes scheme. One is that the American undergraduate who shows ability is frequently captured by business men, who appear to be more alive to the advantages of brain power than are their British confrères. The young American is also anxious to get into active life as soon as possible and pays little regard to the social hall-mark of a University career. Again, many Americans regard scholarships as a form of alms, and the result is that the Rhodes Fund makes no appeal to a great number of young men who are quite able to support themselves at Oxford, although few of them go there. The field of choice is thus narrowed. In addition, the direction of choice is diverted by the fact that when the founder demanded athletic prowess he overlooked the special position of athletics in American Universities, with the practice of developing a corps of gladiators in such exercises as baseball or football instead of having games shared by all. In America a University team is a body of trained specialists, holding a place more nearly resembling that of a Football League team with us than that of our University or school elevens, over-specialised as these sometimes are. Finally Dr. Parkin notes the practice of "passing round" the right to nominate scholars under the Rhodes bequest, so that Universities take their turn and a good man of one year may be ousted by another of inferior ability.

### Democracy and Secondary Schools.

Acting on his plain rights as a citizen Dr. Addison, the Health Minister, sent his daughters to a County Secondary School at Harrow. It happens that this school, like many others of its kind, is full, and there is a long waiting list. At a meeting of the Wealdstone Council it was urged that Dr. Addison ought to remove his daughters and so make room for the children of men who are receiving less than £5,000 a year. It was suggested that his daughters had been admitted to the school by unfair influence and it was said that they were conveyed thither daily in a motor car. To these charges Dr. Addison has replied that his daughters entered the school as pupils some years ago, that one has completed her school education and left, that the other remains and will remain because he considers the school to be a very good one and he holds that he has a right to make use of it. As to the motor car he refuses any apology. This incident is a striking commentary on the demand for universal state schools. Apparently they are to be reserved, not for citizens in general, but for one class of citizens, while those who are believed to be able to afford it must make use of private schools. Such half-blind notions of democracy are very common, and the Wealdstone Council is not the sole repository of foolishness in regard to the proper place of State schools. Even greater folly is involved in refusing to admit that efficient private schools are an essential part of any national scheme of education.

### Lord Rothermere.

In an article in the "Sunday Pictorial" of October 19, Lord Rothermere, who was born a Harmsworth and therefore became a peer, opened a crusade against the Education Act, which he described as "ill-considered," "amazing," and "fantastic," "certain to plunge numberless local authorities into helpless and hopeless insolvency." His lordship affirms, with characteristic stridency of tone, that "ploughboys" will learn, not about the land, but about the wives of Henry VIII. Dairy maids will become experts in astronomy instead of agriculture. "An elaborate system of motor cars" will bring the pupils from their homes and take them back. "The Act," says this well-informed peer, "withdraws millions of fruitful workers from production." Hence it should be repealed or suspended at once. Apparently Lord Rothermere does not know that the parts of the Act on which he displays such ludicrous ignorance are suspended, since the appointed day is not yet fixed for starting continuation schools or for the withdrawal of those millions of fruitful workers. Those of us who care for education chafe under the continued suspension, because we know that the lack of training during youth and the employment of young children for wages have gone far to render our education system useless. It will require more than the ill-informed screeching of a reactionary in a coronet to make us inclined to undo the great work accomplished by Mr. Fisher.

### The Burnham Committee and its Critics.

On Saturday, October 11, there was a special conference or convention at Birmingham, organised by the disaffected members of the National Union of Teachers. The meeting was in no sense a local one, and the Birmingham teachers took little or no part in the proceedings. These were of a somewhat minatory kind, designed, apparently, to chasten the spirits of the Executive of the N.U.T. Some extremely unwise speeches were made by orators who seem to feel bereaved because, for the moment at any rate, they are prevented from striking. The meeting demanded that any scale agreed upon by the Burnham Committee should be submitted for confirmation to a special conference of the N.U.T. We may expect that the Local Authorities will exercise a similar censorship over the scheme accepted by their representatives. This means that the difficulties in the Committee may be followed by a deadlock in the country. So far as the Committee is concerned we are told that there is a good hope of agreement. Lord Burnham is proving himself an admirable chairman, bent upon bringing about a lasting settlement and an atmosphere favourable to friendly negotiation. Recently he invited representatives of the educational press to meet the members of his Committee at luncheon, and while not withdrawing the curtain which hides the proceedings at Whitehall, he certainly succeeded in reassuring some critics who have feared that his Committee would resolve itself into an endless wrangle.

### Pensions and Qualifying Service.

On another page will be found particulars of the Board's announcement regarding qualifying service. It should be noted that this does not rule out any service. It merely includes certain kinds of teaching work as being accepted to make up the thirty years of service required for a pension. Qualifying service does not count in fixing the amount of pension and at present the rule stands that no service will be pensionable outside state-aided institutions. This is an anomaly which cannot endure. An Amending Bill is clearly necessary, not only to secure just recognition for teachers in non-state schools, but also to remove certain difficulties which arise in practice as between the English and Scottish Acts. The opportunity should be taken to press the claims of qualified teachers in efficient private schools. The non-recognition of these claims rests on the technical ground that they are "conducted for private profit." This point could be met by an arrangement which gave to the proprietor a fixed stipend and to the teachers adequate salaries, while providing that any surplus beyond a fair interest return on capital outlay should be spent on the school. This plan would remove the technical difficulty. There would remain, however, the more serious obstacle which arises from the habit of pretending that private schools have no existence, merely because they do not receive grants from Whitehall.

**Wages and Salaries.**

It is announced that two men teachers in Liverpool have resigned their posts in order to become police constables. As an item of news this has been widely circulated in the press, but the true significance of the event has received little attention. Possibly it will form a topic for debate in the secret deliberations of the Burnham Committee, where some members may be trusted to be eloquent on the theme. Assuredly we could have no more biting comment on our present stage of civilisation in England than these resignations. The men concerned must be supposed to have compared the present advantages and future prospects of teachers and policemen and to have decided that the policeman's lot is better than that of the teacher. This means that the community is willing to pay more for keeping its members in order by force than for teaching them to keep themselves in order by the exercise of informed good sense. At Ilford the civic authorities are appointing a foreman dustman at a weekly wage only a trifle below the sum which they pay to qualified teachers with twenty years' experience. It is true that many of us would rather be teachers than dustmen. Our feeling in the matter is not inspired by envy. It is due to our belief that a truly civilised state would have a better sense of proportion.

**MENE, MENE.**

What is this portent for the youth unheeding,  
To start him from his slumbers, mutely pale,  
This sinister half-column we are reading  
In a September issue of our *Mail* ?  
There has been formed a Medical Commission,  
And lady doctors in the class-room lurk  
To weigh his peccadilloes of omission,  
To ascertain the foot-pounds of his work.

More is his now than terror of the master,  
The pleas that erstwhile were his brightest hope  
Shall fail unless his pulse is beating faster—  
There is no dalliance with the stethoscope :  
Excuses, injured innocence, and weeping,  
Protests of toil and singleness of heart  
Droop 'neath systolic evidence of sleeping,  
In waves upon the sphygmographic chart.

A great idea ! And let it be extended,  
Hasten, my brethren, bare your manly chest ;  
The question of the energy expended  
In each department now may be at rest :  
Whether the fight for life is still intenser—  
Thus Æsculapius in time shall tell—  
With those who speak on *λίω* and on *mensa*,  
Or those who wangle "watt" and H.Cl.

A. C. BRAY.

**SCHOLARSHIPS**

By C. W. P. ROGERS.

THAT the Scholarship system as we find it at present in this country is radically unsound cannot be called into question.

The whole matter is to some extent bound up with the view we take of the proposal for universal secondary education. If we admit the desirability of every child receiving a higher education the question more or less solves itself. All that remains for us is to provide the money and frame the regulations for the automatic elevation of every child from an elementary to a secondary school.

I, for one, do not admit that desirability. Such a scheme would result in a gross waste of time, of energy, and of the national wealth. But that we should let no opportunity slip of liberating for the benefit of the State every store of potential energy to be found within its children, and bringing to its fullest development every faculty of promise, I thoroughly agree.

Where do these faculties and energies lie ? They are found in the highest and also in the lowest. Clearly, then, what we want is *Equality of Opportunity*. More than ever to-day do we realise this, when the State makes demands for sacrifice upon all.

I would here interpolate the remark that the grant of a scholarship provided from public funds should necessarily imply the inability of the parents to meet the expenses of a higher education. I greatly dislike the clause in so many scholarship schemes intimating that only those whose parents have insufficient means are "expected" to enter. Such a clause is utterly futile and necessarily incapable of securing the desired end. I would require instead a statutory declaration by the parent that his income does not exceed a certain given maximum. This already exists in some areas, but elsewhere I have known scholarships secured by children despite the "expectance" clause, whose parents could well afford to pay three and four times the value of the award. (Scholarships privately provided, of course, are on a different plane. The donor of such is clearly at liberty to make any conditions he or she may desire.) Especially should I like to see this condition imposed upon competitors for the open entrance scholarships at the Universities, so that those awards might be made more in accordance with the spirit of their founders.

Now what is the implication involved in the fundamental idea of equality of opportunity ? *That any supply of scholarships is necessarily inadequate unless it is indefinite.* A scholarship should not be a matter for competition, but a grant for ability. There should be no question of selecting a few from a large number of able children, but a recognition of the worth of all, provided the necessity for financial assistance exists. If twenty scholarships are offered for competition, and of the entries fifty children are really of sufficiently high standard to warrant an award, by what right are the thirty unsuccessful candidates withheld from the education for which they are fitted ?

And here we touch on what seems to me a most important point in our present scholarship system : *The method of award is all wrong.* I suppose that the least satisfactory of all possible methods of awarding a scholarship is to base the grant upon the result of such examinations as we find in vogue. The ordinary written examination leaves out too many human factors of vital importance.

And as a test of real ability, particularly in the case of children, they are absurd. It surely is difficult to maintain that the doing of a few elementary questions in arithmetic, grammar, history, and the like, a little more quickly or neatly or accurately than someone else is sufficient ground for discrimination. Before me lies the syllabus of the examination for entrance scholarships at a Municipal Secondary School. It probably represents the usual requirements in other districts. My chief impression is that every normal child of the given ages might legitimately be expected to have completed the work outlined therein and to have attained a reasonable standard of proficiency in it. I most certainly should not care to decide upon it which child is most fitted to receive a higher education. Yet because John Jones scores 246 marks and Tom Smith 245, John Jones finds open before him all the paths of life to which a secondary education is the gate of entry, while Tom Smith goes back to his elementary school.

If a minimum standard of knowledge is desirable—and I admit that it is—either a certificate from the candidate's headmaster that such a standard has been attained should be sufficient, or else, as there seems to be in some quarters doubts as to a headmaster's good faith when put to such a test, a few written questions set merely as a *qualifying* examination. But for a proper discovery of worth I would then combine: (a) personal reports from the child's previous head and assistant masters; (b) personal inspection by the head of the school to which entry is desired; (c) a sound oral examination; and perhaps (d) a few written questions of such a character as to bring out the candidate's power of forming and expressing his or her own ideas.

I lay enormous stress on the impressions received from a personal inspection and questioning by qualified persons, that a true conception may be gained of the brightness, mental alertness, and intelligence of the candidate, and that general air of keenness and vitality which is so important.

Basing, then, our choice upon such a mode of selection, all who are judged worthy of a higher education should pass on to it by right.

At once we are faced with the eternal question, "How is the money to be found?" There is no doubt that if for poor children entry to a secondary school is to be merely a matter of brain-power, a far larger number will proceed from elementary to secondary schools than hitherto. In Strassburg, for example, where the experiment has been made of restricting entries to secondary schools solely to children of proved ability, the percentage of working-class children entering immediately rose from five to twenty.

Obviously, for a complete national scheme heavy calls would have to be made upon the Treasury. We should want many more free places, probably more schools, and certainly large sums for maintenance grants, not only to help the parents to meet the greater expenses of all kinds involved in sending their children to secondary schools, but also to recompense them for the loss of potential income during the additional years of school life. If the State demands (as it ought) or at the least desires, a more highly educated body of citizens, it must be prepared to relieve those on whom a burden would otherwise fall. Deny this proposition, and you make the securing of a decent education a mere matter of having money.

## THE PLAY WAY IN LANCASHIRE.

By B. A. WILMOTT.

### IV.—A PLAY.

WRITING my third article on the Play Way in Lancashire in the last week of June, I scarcely thought to accomplish anything new in the two weeks of teaching and two weeks of examinations that remained. Yet in that time we planned, wrote, rehearsed and acted a play or mask in blank verse; had there been but another week it would have been distinctly good, and as it was the general opinion at the performance was that it did the children and the Play Way much credit.

Last January, while finding my teaching legs, one of the first things I did was to give as dictation a story that seemed to lend itself to dramatic possibilities, the Choice of Paris. The æsthetic feeling of a child is a quaint mixture of reverence and fancy, and thus the stories of the old Norse and Grecian gods are just suited to them; for so did the childlike ancients regard them. A stranger in Valhalla, I chose the Olympians. This is the story's core: "To the marriage of King Peleus with the sea-nymph Thetis all the gods were invited save Eris (Strife), who, enraged, threw in at the feast a golden apple bearing the inscription: "For the fairest." As every goddess claimed this, Zeus sent the favourites off to Paris, fairest among mortals, for him to settle the delicate question." In March we attempted to set this going by oral scenes followed by reproduction by each player of his part in blank verse for homework. But although some grasped the idea of regular iambic rhythm and others of a decasyllabic line, so few turned out real blank verse that we left it, and I forgot it.

Then late in June a child asked: "Can't we act a play? The sixth are doing a French one."

"Yes, if you can write one."

In a discussion between the dramatic merits of Joan of Arc and The Golden Apple, fiction held it against history, so the trusty M.C. selected parts, and three scenes were thought out and acted extempore: first, the Sea Queen and Thetis asking Zeus' permission for the marriage; then the banquet; and lastly the scene at Troy. After impromptu rehearsal parts were written out and fitted together, and finally a returned absentee added a prologue to each scene and an epilogue. We had but time for a first copy and the verse is often lame. (They had heard of Scamander as Enone's father, and of Alpheus bold.) On hearing it is only "a well-famed mortal king, master of nations," he is enraged, but when told "Unto thee will he sacrifice, oh king," he relents, and pleading "I have dined with the Ethiopians" he dismisses them and goes to sleep. Is there not character in this? What wealth of poetical anecdote have they not assimilated?

Who would have expected Eris, with true Greek instinct, to insist on coming in before the banquet to tell the audience all she was going to do? As she departs, Hermes enters "to view the wedding feast before the guests."

Methought I heard the hissing of a snake  
Perhaps 'twas only fancy after all.  
But never heed. O the glittering wine  
And golden goblets glistening in the sun,  
The ripen'd fruit piled high on gorgeous plates  
For 'tis the wedding of Pelion's king.

Thetis is happy as the dewy morn,  
And Peleus prouder than the song-thrush, who  
Doth warble at the dawn. Good luck to them  
both.

The gods come in by twos and threes, and Cupid keeps them amused. Cupid as a sprite was a good invention; he had the impudence of Puck, the kindness of Ariel, the vivacity of both. The gods then give their gifts, Hera "the golden keys of a most happy home," Apollo "the gift of happy and bright sunny days."

*Aphro.* To Thetis sweet I give a beauteous charm,  
And she shall live a life of happiness.  
So beauty now shall bring her children fame,  
Such beauty, too, shall couple with her name.

*Nept.* To thee Peleus, I give yon grand oak ship,  
And when thou travelst on the land, steeds  
eight.  
For war, a chariot of gold I give,  
And when thou ridest on the ocean waves,  
The billows shall be calmed. These are my  
gifts.

*Zeph.* I, Zephyr, goddess of soft soothing winds,  
Grant thee the best and truest of all wishes,  
Soft lullabies to thy babes when in sleep . . .

Zephyr would be a goddess. Would a man caress the flowers, and trip along the vales? she said.

*Cupid.* I hope you know what I do give ye. Eh?  
Six sea-nymphs enter and dance and sing, six dances  
and six songs.

(1) How sweet and cool is the glorious sea,  
On whose great waves we ride and play.  
Oh yes! 'tis the only home for me,  
For I'd rather be a sea-nymph—than a  
woodland fay.  
We the sailors do beguile  
With our songs of harmonie,  
And they listen all the while  
Till their ships sink in the sea.

(2) Oh I love to sit on the rocks so grey  
And sing my merry song,  
And watch the waves as they skip away  
Tripping gaily along.

(3) Neptune is our master and lord,  
And he rules the mountain waves,  
We obey his mighty word  
And we tremble when he raves.

*Cupid.* I heard a hiss! Behold 'tis Eris. See,  
There is a golden apple in her hand.

Eris speaks vehemently of  
The insult that upon me has been laid.  
I go, but leave my angry thoughts with you.  
I go, I go, but ye forget me not.

Cupid grabs the apple. "Why trouble ye about my apple, aunts?" and later, "O Father Zeus, pray take it not from me."

*Aphro.* Am I not Venus, the goddess of fair form  
And beauty?  
I claim the apple, my prize it must be,  
And no one, god or sprite, deny it me.

*Hera.* How dare you claim it? It is surely mine.  
O Zeus, do you not hear me begging you?  
Surely I am the fairest of the three.  
Do you not hear my cries? O handsome Zeus.

*Zeus.* You never say that unto me at home.  
No one dare answer, so Hermes, man of the world, is  
consulted.

Among the hills without the walls of Troy  
There dwells a shepherd youth, a worthy man  
And handsome as a fawn, that skips o'er braes  
And bracken brown. Alone he lives, unknown  
Almost to all immortals. Naught he knows  
Of this unlucky strife. Let him decide.

"Methinks it is a seemly plan, Hermes," so all the  
gods depart save Zeus and Cupid, who stay to comfort  
the couple, and Cupid finishes by saying they still have  
little Cupid.

*Pro.* This is Mount Gargaros, where Paris lives.  
On yonder hill the city walls of Troy,  
And cloud capp'd turrets high above the walls.  
There old King Priam lives, and feasts, and  
rules.

Down in the valley yonder Paris lives,  
The shepherd lad whom true CEnone loves.  
And Hermes soon shall come unto him now  
To bring the ladies from the marriage feast.  
He does, and each goddess bribes him with  
The greatest present that you could receive.

*Hera.* Great Asia, and the riches of the world,  
That will not sever away through all the ages.

*Ath.* That thou shouldst be a shrine to fame and  
glory;  
An upright king, a goodly warrior true,  
A lord renowned in war for evermore.

*Aphr.* O Paris, if the apple thou shouldst give  
To me, then I would give thee for your bride  
Helen of Sparta, fairest maid on earth,  
That any god that dwells on fair Olympus  
Should e'er desire to wed. Whom choose you  
now?

*Paris.* Now take the golden apple back with thee,  
And don't forget your promise, fair ladie.

*Aphr.* Oh yes, I will take you to your fair bride,  
Who still lies dreaming of your claiming her,  
And little knows the trouble it will take.  
Yet fly with me and I your love will wake.

So the play ends almost with the *deus ex machina*.

As a Prologue :

The title of our play's "The Golden Apple."  
Thetis, a sea-nymph gay, Peleus, a king  
Wish to be wed, but not so till Zeus wills.  
The sea-nymph and her mother ask permission,  
could hardly be improved upon for brevity and clarity,  
while our Epilogue—

And now our play is over, and I hope  
That all of you have liked it thoroughly.

But now the tale goes on as followeth . . .  
spends (like Euripides) a dozen lines in telling what  
went on after our part of the story. Each player  
produced his or her costume from somewhere. Zeus  
found a globe to contemplate, Cupid and Zephyr found  
wings, Mars a sword, Neptune a trident—need I say?—  
they all did their duty. Had we had *time* to metamor-  
phose the prosaic passages and improve the verse,  
which is nearly all end-stop, what might we not have  
produced?

## THE PUBLIC SCHOOLS AND THE RAILWAY STRIKE.

BY A TEACHER OF THE RICH.

SHORTLY after the Railway Strike "The New Statesman" printed a delightful article under the title "Lo, the poor bourgeois!" After a sympathetic enumeration of bourgeois virtues and achievements, the writer proceeded: "Holding his class in reasonable esteem as we do, we were alarmed to find a considerable section of it during the recent strike behaving with so little sense of the trend of events. . . . That the strike broke out at all, and that it was waged in many quarters with so much bitterness of speech, was the result of the incapacity of great masses of the bourgeois to escape out of their old bourgeoisie of thought. People of this kind fear above all things the disappearance of the bourgeois world. They cannot conceive a better world, unless it be a world of better servants and better telephones."

The Public Schools are fortresses of the wealthy bourgeoisie, and no public schoolmaster is likely to dispute the verdict quoted above. The attitude of the average—even the "average-intelligent"—public school-boy towards such issues as those presented by the railway strike is, or ought to be, astonishing, and is certainly deplorable. To begin with, it is based on total ignorance as to the questions at issue, and the occasion of the breakdown of negotiations. An essay set to an Upper Fifth Form for out of school work, on "Points at issue in the Present Strike" produced only one essay that attempted to set out the facts. The rest were mere tirades loosely hung on to the Prime Minister's text about "anarchist conspiracy." Both in this form, and others above and below it which I sampled, the general attitude was that of oligarchy naked and unashamed. It is true that the boys have been taught no economics, but they have been taught the elements of the Christian religion since their earliest schooldays and presumably in most cases at home as well, but their views rather suggested that they were typical members of the crowd that had shouted, "Not this man, but Barabbas."

It is unreasonable to blame the boys for this state of affairs; it would be easy enough to mete out blame in fairly equal proportions between their schoolmasters and their parents; but it will be more profitable to consider in outline what the situation implies, and what can be done to remedy it.

During the war our leaders promised that victory would bring, not a return of the world of 1913, but a new world—"fit for heroes" and all the rest of it. As to the negative part of their forecast it is plain enough that they were right. Some, having briefly sampled the new world, may be already inclined to cry for the old again, but they might as well cry for the moon. We are to have a new world, but whether fit for heroes or only for hyenas remains to be decided.

The decision rests on many things, but not least on the attitude of the "public school class" towards the aspirations of Labour. Labour may be, indeed is, at times unreasonable, but one might well expect the fortunate classes to take the lead in conciliation. In any

case the spirit in which Labour makes its demands will depend very largely on the spirit in which those demands are met.

And here the public schools might be expected to come in. There is an arguable case against our system of segregating the well-to-do youth in plutocratic boarding schools, just as there is an arguable case in its favour. What is not only arguable but obvious is that it is the duty of those schools to turn out their pupils with at least some understanding of what democratic ideals imply, and what they demand of the well-to-do, who (except when a strike is in progress) mostly pay those ideals the compliment of lip-service.

The obvious instrument of such teaching is the newspaper. Democracy at present, of course, suffers from the fact that the more popular organs of the daily and Sunday press are designed to foster prejudices rather than to spread enlightenment. The "intelligent" press is, for the bulk of readers, an "unintelligible" press, catering for the educated. Also, a proper equipment of intelligent newspapers is an extravagance for the poor. But a proper supply of good newspapers is well within the means of a boarding-house at a public school, and no more valuable lesson can be taught than the intelligent reading of them. At present what usually happens is that the housemaster adopts an attitude of complete indifference, and the boys take in for themselves the kind of selection that can be found on the waiting chairs in a suburban hairdresser's shop. Sometimes even these are monopolised by the Prefects; a small Fifth Form boy asserted to me the other day that it was impossible for him to see a newspaper unless he bought it for himself. I did not implicitly believe him; and suggested that a subscription at the nearest newsagent was well within his means. I give the statement for what it is worth, and add that I never yet met a boy who told me that it was impossible for him to get access to a football or a Latin grammar unless he purchased them himself.

For all these things schoolmasters will, to their unfeigned surprise, have to answer in the Day of Judgment.

I write this article in response to an invitation to describe "a lesson on the Strike." But the fact is, our present habit of digressing idly into "lessons" or "essays" on this and that isolated item in the newsbill, whenever the headlines assume their largest dimensions, is profitless and unintelligent. It is on a level with the religion of the man who only turns to God when he can find nothing else to turn to, like Becket in a delightful exercise I once received: "When Becket saw the knights enter the cathedral, he gave up hope and put his trust in God." We must teach politics, economics, and the rest from day to day and week to week irrespective of "crises"; then when crises come we may learn something from them.

At one school I hear of, the boys were told to write a dialogue between Mr. Lloyd George and Henry VIII on the Railway Strike! One can imagine the sort of article the master expected and probably got. Henry VIII's "Off with their heads!" would not help us very much. I should prefer the Prime Minister to discuss the matter during the present interim with Abraham Lincoln, while, as for Mr. Thomas, he might fix up a trunk call with St. Francis of Assisi.

## ON PLAYING THE SCHOOL PIANO.

BY LOUIE E. DE RUSSETTE.

WHY is it that there is such a firmly rooted idea in the minds of many whose duty it is to play the school piano that tune combined with muscular force is more desirable than musical interpretation? At least so it seems to the onlooker, and not only to the adult, for as one child remarked "I do hope Miss — is not playing for us at our school entertainment," and when asked the reason he continued "She just hammers away at the notes for all she's worth, and keeps the loud pedal down the whole time." Which showed discernment on the part of the ten year old critic.

Forcible music, or rather sound, may be arresting when confined to a single chord, or brief series of chords, struck solely with the object of compelling instant attention, much in the same way as a bell is struck, and not with any musical intention. In this way it serves its purpose and usually produces a momentary cessation of sound. I remember once visiting a Free Kindergarten in a very poor district. The teacher was practically single-handed and at times the children were more than she could manage. When free play was in full swing the noise was deafening. Time came for continuance of lessons and various signals were given in the attempt to restore order, but bell-ringing, the spoken—or rather shouted—word, and clapping of hands were of no avail; rioting still held sway. Suddenly a full resounding chord was sounded on the piano. Its effect must have been startling, for sound ceased as though by magic, and in the lull a quiet order was given, the children formed up into line and were no longer beyond control.

Severe treatment of the piano may be and undoubtedly is effective as an occasional signal for instant attention, but continued loud playing cannot create or sustain a helpful atmosphere any more than loud speaking. It coarsens the sensibilities and encourages loud singing, which quickly degenerates into shouting. It even encourages loud talking on the part of the children. They think their noise is not noticed whilst the sound of the piano is so domineering. Continued piano slogging causes the ears of the listener to lose its sensitiveness and has an unrefining influence, whereas music should have exactly the opposite effect, and be one of the most helpful means of developing refinement and rendering the mind and ear sensitive to beauty.

Music in the school whilst usually considered necessary is often treated as a mechanical performance. The March becomes the "rhythmic noise" which keeps the steps together. The Hymn music at morning assembly makes known the allotted tune and continues until the verses cease, often striving to hold its own above the surging swell of sound from massed and lusty voices. Drill music certainly gives zest to the exercises, but is apt to suggest that the piano were wound up to perform a series of set tasks. In the singing class when the song has been successfully sol-fa-ed or staff notated, as the case may be, and the words made to fit in with the music, there is often little attempt at further understanding. The piano simply plays the melody and helps to keep the voices together. In these and other ways the piano may and does help in a material way, yet as a rule it is scarcely of educational value in itself nor an aid to musical appreciation. Let us consider the possibilities of each in turn.

*The Assembly or Dispersal March.*—The March is a valuable and enjoyable asset, combining activity with free discipline. Strict time is essential, with emphasis on the first and third beats. The left hand sets the step and the right plays the melody. A new march played each week, or even less frequently, would provide freshness and draw the attention of the school to it as something to be listened to and not to be regarded simply as a background for action. Whenever a fresh march is introduced it could be played and definitely listened to before the children actually marched out to it. There is scope in marches for considerable change in the character of the music, although uniformity of speed is essential. Compare two of Schumann's, for example; a sense of dignity is much more apparent in his "Northern Song" (Scenes of Childhood) than in the "Birthday March," whereas the latter has a much more noticeable melody and contrasting theme. Practically all the great composers have written marches, so there should be no resort to Albums by unknown and inferior writers, nor to change and spoil the personality of pianoforte solo music by adapting it for this purpose. Schumann's "Northern Song" was not intended as a march, but in thus using it I do not consider the character of the music to be changed, and in using it always for this purpose I feel justified in classing it as a march. It is one of the best I know for a dignified Assembly March for the middle and upper school; but whenever the Andante movement of Beethoven's Sonata, Op. 14, No. 2, is thus used it is robbed of its rightful value. Once a march always a march.

*Hymns.*—There is a spirit of dignity and harmony in hymn music which if well interpreted can create a very helpful influence to which children unconsciously respond. When a tune is heard for the first time the melody should be clearly played and the other parts kept in subservience, but as soon as the tune is known the beauty of the harmonies can be brought out, and the spirit of the words revealed in the music, so that not only the character of each versé but each part of the versé is interpreted. On a glorious summer day the hymn chosen for Morning Assembly may be "Summer suns are glowing," and there will be joy in the music, but when we come to "Lord upon our blindness" there is a marked change, and as the piano is played more quietly to express the spirit of the words the hymn has added meaning. There are few hymns that allow no change of character in their interpretation.

*The Drill Class.*—Drill music does not give much scope for special musical insight. Whilst keeping strict time the music should be distinctly rhythmic in character and should "go with a swing," avoiding every suggestion of mechanical performance. Selections from musical comedy, pot pourri or well-known airs, dance albums, and music of popular rather than artistic merit are helpful adjuncts to this form of activity. Variety of theme gives added zest to the exercises. There is a buoyancy about drill music that is most exhilarating.

*The Singing Class.*—Here is the teacher's supreme opportunity to develop the musical observation and understanding of the children by gaining their co-operation, so that it is they who realise and decide for themselves the interpretation of their songs. Whilst limiting ourselves by keeping to the point of view of the piano, several methods can be suggested as aids to expression.

A chosen verse can be played and the class asked to notice in which parts the music is loudest or quietest, and to give reasons. Or again, a verse may be played and the children left to find out which one through listening to the pianist's interpretation. As discernment increases a verse requiring careful rendering may be played with faulty expression, the class in this case pointing out where the music was not in sympathy with the words. Boys and girls thoroughly enjoy this co-operative method of song interpretation and are quick to realise the various shades of expression and to enter into the spirit of the song. The influence on the singing is most marked, you cannot but feel that they live in the song and have made it their own. It also makes them keenly critical and the pianist needs to be very much on the *qui vive* as regards interpretation. Sometimes the ideas of the class do not coincide with those of the adult, and unexpected insight is gained of the outlook of the boys and girls. On one occasion a hymn was being interpreted; in this case it was the class who suggested the expression prior to hearing the tune played, and when it came to the line "And give us peace" a child suggested *ff* as the marginal mark of expression, his reason being given in all earnestness, "If yer wants something very much yer has to holler for it."

Children have an instinctive love for music, but this needs to be cultivated in the right direction during their school days or the standard of appreciation is in danger of remaining low. Consequently unless home influence comes to the rescue the music that will appeal through life will scarcely be of an elevating nature. The lack of musical discernment and appreciation shown in many of our day schools is due surely to the fact that the boys and girls are not trained nor encouraged to consider the piano as something to be consciously listened to and not simply heard. They regard it mainly as connected with marching and singing, therefore merely as a background for action.

A special class devoted to Musical Appreciation meets this need and wonderfully raises the musical standard of the school. But the school syllabus is often filled with other necessary items, and music is crowded out. This is especially the case where the education has been fixed on a purely utilitarian basis for commercial purposes. Music then is unfortunately considered an "extra" and not an essential part of school life and influence. Even under such circumstances though I believe a brief space of time could be set apart, say twice, or even once, a week for the purpose of definitely listening to music and would be of immense value. Ten minutes would be sufficient, and after Morning or Afternoon Assembly might be a possible time, before the classes disperse. The idea being not simply musical education in an isolated sense, but as far as possible to connect music with the school and home life and interests. There are various ways in which this listening-time, we will call it Musical Observation, could be spent. The following are a few suggestions:

*Musical Observation.—Marches.*—A new march can be decided upon, two being played and votes taken on them. Or two marches could be played, one suitable for School Assembly and the other for the Drill Class, the differences in character noticed by the children before deciding which would be the more suitable for each

purpose. *Hymns.*—Occasionally a new or special hymn needing expression could be interpreted, the words printed on calico or on the blackboard, in either case a marginal space left on the blackboard for marks of expression. These to be written up according to the children's suggestions. *Songs.*—When any class has learnt a favourite song this would give an opportunity to sing it. National music or songs could be given in connection with national or world-wide events. (A useful book for this purpose is "Songs and Dances of all Nations," published by Bayley and Fergusson.) Any illustrated History of Music also supplies excellent examples of early and modern music of all nations. *Pianoforte Solos* could be played and opportunity given for the children to form and express opinions as to the character of the music, possibly its title, the moods expressed, and so forth. An anecdote relating to the life of a composer adds greatly to the interest in music played and connects the writer with his work. Stories relating to the compositions themselves should be absolutely authenticated. National music makes a wonderful appeal, especially to boys. An unruly class of ten-year-olds became almost self-disciplined entirely because if they got through their singing in good time the last five minutes was spent in having music characteristic of all nations played to them. The keenness of the boys was surprising.

A few suggestions have been given of a preliminary character, but the subject affords endless scope for variety and experiment. Children love to be played to when their minds are prepared to listen. Whenever possible their co-operation should be gained and their observations and suggestions acted upon. A Suggestion Box is of value. The children should clearly understand to what they are to listen, and to this end the use of a blackboard is all important. When once the ears are opened to listen to music, they will become conscious of its beauty and respond to its appeal. Whether it be in the Assembly March, the Morning Hymn, in Song or Drill, or whatever the occasion may be, music will mean something to them.

A brief word as to the instrument concerned. School pianos are seldom if ever ideal to play, but tone quickly deteriorates when the instrument is handled roughly, and the worst as well as the best piano needs care and improves with regular tuning and overhauling. Pedals have a habit of getting out of order, and "black lead" is not always the infallible remedy.

It is not so much skill of technique that is needed on the part of the pianist as sympathy and interest. There is all the difference between "playing" and "playing on" the piano.

#### **Shorthand Challenge Shield.**

The Silver Challenge Shield presented by The Right Hon. Lord Foley, Vice-President of the Sloan-Duployan Society, for competition among schools teaching the Sloan-Duployan System, has been won this year by the Academy of Our Lady of Mercy, St. John's, Newfoundland.

Schools entering for the Competition present a team of six pupils, the test being matter of average difficulty dictated at the rate of 100 words per minute for five consecutive minutes. The team securing the highest average of marks holds the shield for a period of one year. The trophy becomes the property of any school winning it for three years in succession.

## OXFORD SUMMER SCHOOL, 1919.

## Diploma of Education.

"Summer Schools are necessary evils, but boating on the Cher is pleasant and the Hall of St. John's College will be cool and restful on the hottest day." "Besides, the month's course will qualify residentially for a Diploma in Education." Thus thought many a demobilised dominie in need of a refresher course as he filled up the application form for the Oxford Secondary Training Delegacy. He will fill one up and go again, however, though qualifications of residence and diplomas no longer induce; Oxford will call, and the conviction that Dr. Keatinge is worth hearing again—every time.

A general introduction to the scientific study of education is provided by the full month's course. This comprises lectures on psychology and method by the Director of the course, daily discussion lessons, and lectures on the latest methods of teaching the usual school subjects by specialists and pioneers. These latter lectures fall into periods of a week in order to enable the student who can attend for one week only to cover the ground of his subject.

History and Geography were taken first this year. The lecturers were Mr. W. L. Bunting, of Osborne, Miss Burstall, of Manchester, Mr. E. Barker, of New College, Oxford, Mr. David Somervell, and Mr. F. S. Marvin, H.M.I. These need no introduction, and their names guarantee the interest and value of the week.

Mathematics and Science were taken in the second week, and the lecturers were Professor T. P. Nunn, of London, Mr. F. Clarke, of Crediton, Miss L. M. Drummond, of the North London Collegiate School, and Mr. A. F. Heath. Professor Nunn proved stimulating both as a teacher of small boys and as a conference lecturer on mathematics, whilst Miss Drummond and Mr. Heath advanced unusually clear ideas on the teaching of science.

The pioneers of the Direct Method for the teaching of languages were gathered together as lecturers in the third week. Dr. Rouse of the Perse School (Classics), Mr. F. B. Kirkman and Mr. E. A. Peers (French), Mr. H. C. Barnard and Mr. Sharwood Smith, of Newbury, Miss M. Barron (Phonetics). Dr. Rouse spoke as an unassailable authority, Mr. Sharwood Smith with refreshing candour and much free criticism, Mr. Peers of the "Chart System" for the elimination of errors in French composition, as a modernist.

English was treated in the last week. Mr. H. C. Cook, of "The Play Way" fame, Miss Scott Moncrieff and Mr. P. Simpson, of the Oxford University staff, Professor Ripman, of London, and Mr. Greening Lamborn were chiefly responsible for the lectures. During the last lecture Mrs. Keatinge sang selections composed and set to music by Mr. Lamborn's boys, and the conference closed amidst scenes of great enthusiasm.

The stories of modern sociological experiments were told by Dr. Westlake, of the school of woodcraft chivalry, Miss Frodsham, of Halsey Training College for Continuation School Teachers, and Miss Rendal, of the Caldecott Community.

But the joy of the course was provided by the lectures of Dr. Keatinge. In twenty-four lectures on educational psychology and general methods a lecturer can make headway or lose himself altogether. Dr. Keatinge carried us with him all the way, for his mixture of extreme candour and wise moderation never failed either to convince or to charm.

H. N. LOWE.

Mr. H. N. Brailsford has a new book in the press entitled *ACROSS THE BLOCKADE*. It is to be published almost immediately by Messrs. George Allen and Unwin, Ltd., and gives a vivid account of the author's recent experiences in Hungary and elsewhere.

## CHRONICLE OF EDUCATION.

- 25 Sept.—Re-opening of Labour College at Earl's Court.
- 26, 27 Sept.—Educational Conference on the Teaching of History, Geography, and English at University College, Reading. Addresses by the Dean of Christ Church, by Mr. H. J. Mackinder, M.A., Professor Edith J. Morley, and Mr. W. M. Childs, M.A.
- 26 Sept.—Dr. Ripper presided at a meeting in Sheffield arranged by the local Federated Educational Association. Address by Mr. Fisher.
- 3 Oct.—Presidential address of Mr. G. D. Bell, London, to the Conference of the National Federation of Class Teachers at Liverpool.
- 7 Oct.—Lecture by Sir Henry Miers, Vice-Chancellor of Manchester University, to the Manchester Literary and Philosophical Society on "Science and Practical Life."
- 8 Oct.—School of Librarianship opened by Sir Frederic Kenyon at University College, London.
- 10 Oct.—Peace Treaty signed by King George.
- 10 Oct.—Address by Miss O. Lewin, M.D., to the Parents' National Education Union, on "Nasal Hygiene and the Prevention of Colds."
- 14 Oct.—Address by Mrs. Scharlieb on "The Relation of Alcohol and Alcoholism to Child Welfare," to the Society for the Study of Inebriety, at the Royal School of Medicine.
- 15 Oct.—Address by Dr. William Brown on "Psycho-Analysis, Suggestion, and Education" to the Education Section of the British Psychological Society, at the London Day Training College.
- 15 Oct.—Lecture by Dr. Maria Montessori at the Central Hall, Westminster, at 8 p.m.
- 17 Oct.—Honorary degree of D.Litt. conferred upon Mr. Lloyd George at Sheffield.
17. Oct.—National Demonstration at the Albert Hall, at 7-30 p.m. Addresses by Mr. H. A. L. Fisher and Mr. Frank Hodges, Secretary of the Miners' Federation.
- 17, 18 Oct.—The Annual Convention of the Workers' Educational Association at Nottingham. Addresses by Mr. Arthur Greenwood on "The Relation of the Board of Education, the Universities, and the W.E.A.'s to Adult Education," and Mr. Reuben George on "Some Unconventional Approaches to Adult Education."
- 21 Oct.—Meeting of the National Baby Week Council at 224, Great Portland Street, the Hon. Waldorf Astor presiding.
- 23 Oct.—Meeting of the Child Study Society, at 90, Buckingham Palace Road, at 6 p.m., to discuss "The Literary Needs of the Child."
- 24 Oct.—Half-yearly meeting of the Philological Society at University College, London.
- 24 Oct.—Address by Dr. Barbara Tchaykovsky to the Annual Meeting of the National Council for Domestic Studies on "School Children and the Home," at the University Club, Gower Street.
- 31 Oct.—Address by Mr. H. A. L. Fisher to the London Teachers' Association at the Memorial Hall.

## SUBJECTS AND METHODS.

### A Course for Music Teachers.

WHAT is School Music? How are we to place it? Is it Art or Science, Hand and Eye Training, Physical Exercise and Hygiene? Are we to feel it, or do it, or think it? Is it study or recreation? Is it question of body, mind, or spirit? Is it matter of æsthetics or primitive impulse? Is its influence social, or moral, or sublimative, its appeal to the creature, the man, or the God? Is it a subject for examination, analysis, discussion, or a synthesis of influences? Are we to work upon it, or it upon us? Is it punctual time-keeper, appearing by appointment, or spirit that fleeth as it listeth? Can it be organised, or does it just happen?

Of course you have your answer, and a sense of inadequacy also. Perhaps you adopt the Parliamentary style—"The answer to these questions is in the affirmative"—and though facile this formula may conceal a portion of the truth, and if so the peculiar importance of Music is made plain. Of what other subject could so many questions be answered in the affirmative?

Immediately these questions are set a-working for the nth time by the Board of Education's "Short Course" for Music Teachers in Secondary Schools and Training Colleges, held at the Royal College of Music in August.

Mr. Scholes and his colleagues will not feel ill-used that, because of space only, compliments are omitted. The Staff was admirable; in conception, matter, spirit, the Course was satisfying; so much one says, weighing words. It is an achievement that some seventy professional people, discussing expertly during the space of a long fortnight, should keep one objective clearly in view; and that, not themselves or their work, but the origin and end of their work. If you were to say that they were teachers and therefore the methods and ideals of their teaching ought to have been chiefly in their thoughts you would be speaking with justice about almost every other body of teachers, and wrongly about this. They were music teachers, and rightly their thoughts were turned to music. Much else, of course, was brought into view; but always to recede, always to leave music standing there, serene, unique.

It would seem inevitable that those processes of mind which result in the conscious attitude we nowadays call "appreciative" should find embodiment in non-logical demonstrations. To be logical and complete is to preponderate the intellectual; and if this fault vitiate the first conception, the demonstration in practice is doomed to stiffness, lop-sidedness, and death. This holds true when we speak of our delight in a Corot, when we show forth the praise of a sunset, when we tell the glories of the Cesar Franck Symphony or the simple melodic wonder of "Early One Morning." Be exhaustive and you kill; complete the logical tale and you defeat yourself. Suggest and you may win. If you would build, throw fragments hither and thither; for the building, good or ill, must be done not by you, but by the victim of your enthusiasm.

This course was logically unlogical. It suggested, disrupted, flung fragments right and left; and so achieved what it set out to achieve. It made the bricks and gave the mortar for the unseen shrine which, in the fastnesses of mind, never was and ever is, like fabled Camelot—

". . . . never built at all,  
And therefore built for ever."

This was the spiritual triumph of the course; and it was reached because it was all so very human. The whole thing seemed to happen; you never dreamed a Board of Education could exist within a stone's throw. Miss Nancy Gilford, Mr. Whittaker, Mr. Milne, Mr. James Brown, rolled up and took their turn at having pot-shots, at any range that offered, with any missile that fell handy. The battered Muse

was hard hit and often; but the more she was hit the more she smiled and disclosed herself generously. It is a strange thing that few musicians seem to write the English language well, however pleasantly they speak it; and the syllabus of the course gave ground for comment. Miss Gilford was announced to treat "Pianoforte Teaching," Mr. Whittaker "Class Singing," Mr. Milne "Appreciation," and Mr. Brown "Orchestra." Their subjects—or rather their games—were Catching Music at the Piano, Singing Music Together, Opening Doors and Windows to Music, and Music by Playing. Much technical instruction imparted; much thought behind; much of method suggested, with stimulation of thought.

Much more than a conveyance of knowledge, or even than an interchange of views, the course was eclectic in method and of catholic appetite. It embodied the types of musical activity possible and proper to Secondary Schools; embodied, too, the spirit which alone permits Music to rest where she alighteth. There was freedom, comradeship, spontaneity, give-and-take; there was willingness to deviate from the appointed path; leadership was unobtrusive, but personality swayed; and the issue, solid work.

In all this, and much more, the course was an allegory of what might be done—and is done—in liberal schools, showing, moreover, what use can be made of gramophones, pianolas, concerts, and the impressed services of visitors with a gift in directing thought and creating interest. But Mr. Scholes himself raised the questions which group around the relations between music and the school curriculum, and between the teachers of music and the teaching profession; and here again the very existence of this course is significant. This was the first Short Course in Music organised by the Board; the profession would do well to note, not sardonically that it was the first, but that it actually has been. If enthusiasm counts with the Board, the course will be repeated and become permanent. Music at last is really on the way to be recognised as a subject of official importance in school organisation.

It is a fair inference that the Board will gradually tighten up its requirements in this subject; and music teachers will take heart and wail. They wailed at the Royal College—as all specialists wail, and have wailed, since the making of the world. Heads are callous, philistine, intrusive; time is short, distraction long; staffs are exclusive; music is an afterthought, its representative not thought of at all. All true—and all untrue; and instead of wailing, these quite able teachers of music must set themselves to convince their colleagues it is true, and themselves that it is false.

Some apparently look to the Board to "raise the status" of school music teaching; others asked for arguments to confute the unbeliever. Music will win her place neither by argument nor Board, its teachers their chance neither by official memoranda nor inspectorial pressure. Music and teacher alike must win place by taking it. The teacher himself, and the music he makes, are the ultimate apology. The Board might elevate music, as it has drawing, to a major place in the training of teachers; Universities might be persuaded to make it a matriculation subject; and this process might be expedited by artful politics. But to what end? Would music smile more happily? Would she continue to offer herself as a target for the pot-shots of her worshippers? Do we want school music to be examined by the Oxford and Cambridge Syndicate and the College of Preceptors?—It is infinitely more hopeful to reflect that the Board called to the direction of its first experiment the protagonist, in this country, of the popular exposition of music, and left him a free hand to choose his staff. Mr. Scholes is to be congratulated upon his conception of the task; his colleagues upon their work; and students and Board alike, in both senses of the expression, upon the choice of Mr. Scholes.

W. C. W.

## SCOTTISH NOTES.

### The Cost of Education.

Mr. D. M. Cowan, M.P. for the Scottish Universities, delivered an address on "Expenditure on Education" in Glasgow, on October 14th. Mr. Cowan said he could not see how any reduction could be effected in the amount of money spent at present on education in this country, but suggested that a much larger sum than is paid at present ought to be derived from the Imperial Treasury. The lecturer referred to the increasing wideness in the application of the term "Education," pointing out that it now meant the harmonious development of the individual, physical, mental, spiritual, and moral, and our educational system was organised, so far as it could be, to produce that result. At present the school was performing duties which properly are the function of other agencies—such as housing and health—but unfortunately the country was not in a position to deal with them at present, and hence the apparent large expenditure on education. But he asked if any one would willingly try to save on any such activities as nursery schools for children whose mothers had to go to work, or on schools for deaf, dumb, and blind children, or for children mentally and physically afflicted. Could anything be saved on the work of the ordinary schools? It could not be denied that many of our schools were badly ventilated, inadequately heated, erected in places too near to noisy traffic, and were hardly ideal places for children to spend several hours a day. No one could say that there was extravagance in staffing when we find teachers with 50 and 60 pupils in a class. It was generally agreed, too, that teachers had been most inadequately remunerated for their work. But as education was a national service it was quite a legitimate argument that a larger proportion of the national expenditure should come from Imperial sources, and that the Exchequer should pay 75 per cent. of the cost, and local authorities 25 per cent.

### University News.

The Universities have resumed work. The winter session usually commences in mid-October, and for the current session the number of students is expected to exceed all records due to the large number of ex-service men who are now resuming or commencing their academic studies. Accommodation will be, in many cases, difficult to secure, especially for many of the practical classes, but this matter is engaging the attention of the authorities. At Edinburgh facilities are offered for advanced study and research for graduates of other British, Colonial, and American Universities. At Glasgow the classes in medicine and engineering have attracted an exceptionally large number of students, and the resources of the university buildings, and the various affiliated institutions, will be taxed to the utmost. Several new appointments to the ranks of the professoriate are announced, and at Edinburgh Earl Beatty will be installed as Lord Rector. President Poincare is Lord Rector of Glasgow, and his postponed visit is now to take place on November 13th, when he may be sure of a rousing reception from the students.

### The Educational Institute Meeting.

The attendance at the annual meeting of the E.I.S. at Edinburgh on September 20th was almost a record, and the proceedings were wholly professional, the question of salaries taking up a large proportion of the time.

The President in his retiring address referred to various matters of general interest, and then devoted some time to the attitude of Labour to education. The workers are whole-heartedly in favour of educational facilities being as widely distributed as possible, but it appears to one section that the knowledge imparted by teachers is not what it ought to be, and this section seems to favour a re-writing of school books. Knowledge is believed to be derived from a tainted source—and even teachers are suspect! The

President finds in the true character of knowledge, Truth the antidote to this attitude. Mention was made, too, of the lack of what may be termed "pedagogical initiative" among Scottish teachers. "We have," he said, "none of the signs of live professional interest such as mark other professions, and our own profession, in other lands." He referred to the absence of pedagogical clubs and magazines, child study associations, etc., and spoke pointedly to teachers regarding this apparent want of real interest in their profession. There is no doubt that teachers' meetings are too much taken up with matters of purely professional, or rather personal, interest—the cause of education being practically ignored. The goodwill of the public is not to be maintained in this way.

### The Salaries Campaign.

Since the announcement of the new national minimum scales of salaries sufficient time has elapsed, and sufficient opportunities have occurred, for the opinions of teachers to be voiced. The organ of the profession in Scotland has opened its columns to expressions of opinions, while wherever teachers congregate, in staff rooms, at teachers' meetings, and at the annual meeting of the Educational Institute, the salary question reigns supreme. Generally speaking, teachers agree that a great improvement has been effected—rural teachers are in no doubt on that point—but most of the discussions that rage centre around one point—the differentiation between graduates and non-graduates. This differentiation amounts to anything from £60 to £110 per annum when the various maxima have been reached, and as non-graduates do not concede that they are being fairly treated, they are up in arms. It raises again the question of equal pay for equal work, but in this case the extra qualifications of the graduates must be considered as being worth something. Certainly the just claims of existing non-graduate teachers of proved experience and ability must be generously dealt with, but this is left to the discretion of the Authorities when these bodies frame scales for teachers in their areas.

### Educational Finance.

It is apparent that the financing of the various schemes of the new Education Authorities is going to give rise to grumbling. The addition to the rates is bound to be substantial in practically every district, and the adoption of the new national minimum scales, or an improvement thereon, will not ease matters any. The poorer areas are clamouring for aid; one parish has absolutely refused to make a levy for education, and the time seems ripe for consideration of the whole system of local rating. Under the present system the Education Authorities intimate to the Parish Councils the extent of their requirements, and the latter body impose the levy. Further explanations when asked for by the Parish Councils help matters none, and there seems to be a growing demand for further Government help—that the Government should pay three-quarters instead of one-half of the cost of education. That the Government is prepared to assist is evident from a letter read at a recent meeting of the Invernesshire Education Authority, which intimated the intention of the Scottish Education Department to make special grants to necessitous districts in relief of expenditure on education.

### Free Books.

It is noteworthy that many of the Education Authorities in Scotland have adopted the principle of free books. By this many anomalies are removed and teachers should be greatly helped in the furtherance of their work.

### Serbian Boys in Scotland.

After a stay of about three years most of the Serbian refugee boys who have been at various schools in Scotland have been repatriated. Eager to learn, and diligent in the prosecution of their studies, these boys have done remarkably well, and a few of them continue their residence here to attend University classes.

## PRIMARY SCHOOL NOTES.

BY OUR SPECIAL CORRESPONDENT.

THE decision of the National Union of Teachers to admit uncertificated teachers to its membership is likely to lead to a difficult situation. There are about 39,000 of these teachers serving in the schools, and of these about 35,000 are women. Naturally they hope to reap some real benefit as a result of membership of the Union, and one of the first benefits sought is recognition—under certain conditions—as certificated teachers. The policy of the N.U.T. has been and is that the certificate of the Board shall be granted by examination only and after a period of training, but the Acting Teachers' Examination—an examination open to all uncertificated teachers—has hitherto stood in the way of its realisation. The Union, therefore, has for many years advocated the abolition of the Acting Teachers' Examination. The problem to be solved is this: to abolish this examination without at the same time doing an injustice to the uncertificated teachers by preventing them from qualifying for the Board's certificate by the only avenue—other than that through the training colleges—at present open to them.

I understand the uncertificated teachers agree the Acting Teachers' Examination shall be abolished provided the older and more experienced of their class be recognised by the Board as ordinary certificated teachers as a reward for long and efficient service. This is asking a great deal and, in my opinion, more than the Executive of the Union is likely to grant. The certificate of the Board at present carries with it a guarantee of certain attainments on the academic side—attainments which are well known in the primary school services of the country. It is the desire of the Union to raise the standard of those attainments and in addition to secure the certificate as a guarantee of professional training in every case. To agree that lengthened experience and efficiency as a disciplinarian shall in themselves, and without any academic guarantee of educational attainments, constitute a claim to the Board's certificate would scarcely fit in with the Union policy. It would lower the value of the certificate and bring to nought all past and present efforts in the opposite direction. After all, every uncertificated teacher may—until the Acting Teachers' Examination is abolished—qualify for the certificate by examination. Those who are intellectually incapable of doing so must necessarily be of limited usefulness in a school, and those who are unwilling to undertake the necessary study are not worth consideration. Until the supply of candidates who have been fully prepared for the profession of teaching both academically and professionally is sufficient to meet the needs of the schools it will be necessary to employ the uncertificated teacher. It will be well to recognise this. It is in the best interests of education that the real state of affairs in respect of the teachers shall be well known. The Union cannot afford to offend its fully qualified members by consenting to camouflage the existence of its unqualified members.

Lord Burnham's committee on teachers' salaries continues to meet, and this fact in itself augurs well for the achievement of the purpose for which it was constituted. Evidently there has been no impasse as yet. I understand the relations existing between Lord Burnham and every member of the committee are of the pleasantest, and that everything possible is being done to find a national minimum scale which shall be accepted by each side of the committee as satisfactory "in the first instance."

Outside the Committee there is a certain amount of suspicion and distrust. In some quarters there exists a freely expressed opinion that the teachers' representatives have been drawn into a trap and that, in short, they are incapable of making a bargain. All this discontent was

focused in an unofficial convention of the "ginger group" held at Birmingham on 11th October. There was much wild talk from many of the members, but no useful suggestion as to a better method of improving teachers' salaries than that already adopted by the Executive in accepting Mr. Fisher's invitation to enter into negotiations with the representatives of local education authorities. A resolution was adopted by the meeting declaring "that under *no circumstances* in future will it relinquish the strike weapon, *even for a limited period.*" The italics are mine. To publish a policy of this kind is most unwise. At the present moment it is sheer lunacy. Strikes are not popular just now, especially when conducted on a national scale. Even in the industrial world they have not been as successful in peace time as their organisers hoped, and therefore it is safe to predict that in the world of education a strike of teachers on a national scale will never take place.

I am glad to know the teacher representatives on the Burnham Committee are quite unmoved by the Birmingham rhetoric. They are determined to secure the best possible terms for the greatest number of teachers, and are not so unstatesmanlike as to sacrifice the obtainable on the altar of the ideal.

The finances of the nation call for economy. The spending of public money is criticised on every hand, and the public look askance at all proposals which mean increases in rates or taxes. This is not the time even for a local strike. I have no hesitation in saying that as things are now teachers should regard the existence of the National Joint Salaries Committee as a boon. It came into existence at the right moment; it is actuated by the right spirit; it will do the right thing.

The London County Council Education Committee in considering the future development of primary education in the metropolis is proposing a reduction in the number of the Scripture lessons per week with the object of obtaining more time for other subjects. At present two-and-a-half hours each week are devoted to Scripture instruction, in five lessons of thirty minutes each. It is proposed to confine the instruction to two lessons per week each of forty minutes' duration, the time devoted to prayer and hymns to remain as at present. The change is wise. The syllabus of Bible instruction need not be curtailed as a result, and there will be a distinct gain on other directions. It has always been difficult to understand why primary school children should need so much Scripture instruction and secondary school children so little.

It is much to be deplored that the new London Schoolmasters' Association has begun its activities by advising its members to withdraw from the London Teachers' Association. The withdrawal is advised because of the men's opposition to the "Equal Pay" policy of the big London Association. The leaders of the L.S.A. seem blind to the signs of the times as regards the payment of women teachers. The small supply of men teachers will prevent the adoption of "Equal Pay" by any authority for many years to come. Thus in order to safeguard something which is not endangered the new association has decided to abandon all the advantages which numbers always command. It is a shortsighted policy. The new organisation could have done useful service from its own point of view by organising a movement within the L.T.A. for reversing that association's decision on the Equal Pay question. It could have moved for a man's committee within the L.T.A. with freedom to speak for men and insisted on having the men's case presented by men for men without reference to the women. All this was possible through the L.T.A., but the unstatesmanlike course of separation has been adopted and unwise counsels have prevailed.

## EDUCATION ABROAD.

### The Bolsheviks and Education.

The Special Correspondent of the "Manchester Guardian," Mr. W. T. Goode, the well-known Principal of Graystoke Place Training College, London, describes the attitude of the Bolshevik Government towards education. He has interviewed Lunacharsky, the Commissary for Education, and his assistant, Professor Pokrovsky. He assures us that the Bolsheviks are fully aware of the magnitude and seriousness of the Russian educational problem, and describes them as facing it with a determination to remove the illiteracy of the peasant and to bring the folk-school into direct contact with village life, providing classes in technical and artistic instruction for the workers, founding a popular University system, and maintaining the old schools of artistic culture in ballet, theatre, and painting. Money has been freely assigned for these purposes. In the villages it was sought to bring the peasants themselves into the educational movement. The schools were made into "working schools," in which, besides reading, writing, and arithmetic, the school work was brought into relation with all the operations of village life. These include in Russia not only agriculture but also woodwork, ironwork, the preparation of flax and wool, spinning and weaving. Hundreds of school buildings have lately been erected by the peasants, and in Moscow there is a great training college for providing a supply of village teachers. This is housed in a large building in the Ekaterinsky Square, which was formerly a boarding school for girls of wealthy families. It now provides accommodation for 300 teachers selected by local Soviets and sent from all parts of Russia. They live in the building, which is large enough to provide living rooms, class-rooms, workshops, and a fairly large practising school. All the operations of a village working school are taught theoretically and carried out practically. The care of the house and the cultivation of a large garden are undertaken by the students and children. For town and factory workers classes in technical subjects and art have been started and are in great demand. Music and dramatics are studied. Children do not begin to work for wages before 16 and then the working day is six hours up to 18, two hours a day being spent in study.

Naturally, much of the equipment is hastily improvised, but Mr. Goode thinks that it serves its purpose. The popular Universities are rapidly ousting the older institutions, and Professor Timiriasev, the botanist, is quoted as saying that University professors who had been appointed under the old regime were likely to be deserted. A few of them, however, were teaching in the new Universities. The four great Schools of Art, two in Moscow and two in Petrograd, have been nationalised, and the students choose their own professors, with the result that "the taste of the day after to-morrow seems to be in the ascendant for the time being." The ballet and the Art Theatre of Moscow have been left to themselves, but other forms of dramatics are nationalised and tickets are distributed to the working people. The Moscow Soviet runs concerts of chamber music at small cost and the audiences are large. On Sunday afternoons special theatrical performances in the parks are given free for children only. Mr. Goode attended one in the Zoological Gardens, where he saw about 2,000 children under 14 intensely interested in "Uncle Tom's Cabin." He also went to the Tretiakovsky Art Gallery in Moscow, and found it crowded with visitors who were being taken round by practised guides.

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### Open Air School at Stoke.

The Stoke-on-Trent Education Committee has established an Open Air School at Hanworth for children needing special treatment. By arrangement with the Duke of Sutherland the committee has taken over the premises formerly used as a Holiday Home for Convalescent Children, and in future the children will be selected by the committee's medical staff. The adaptation and equipment of the buildings will be paid for by the committee, but the Board of Education will pay one-half of the maintenance cost. It is hoped to provide for fifty children at a time, giving three months' treatment to each. This will give room for 200 children a year. The school was opened on October 13th by Sir George Newman, who said that education was not merely the instilling of facts into a child's mind, but awakening the intelligence, developing the powers, and tenderly caring for the personality, the soul, of the child. He hoped that the open-air schools for delicate children would lead to more open-air in our educational system generally. A special word of recognition is due to the work of Alderman Elliott, Chairman of the Stoke Education Committee, to whose efforts the foundation of the school is largely due, with the cordial co-operation of his colleagues, and the able help of Dr. Ludford Freeman, Director of Education for Stoke-on-Trent.

### Crowded Universities.

An unprecedented rush of students is reported from all our Universities and University Colleges, and the authorities are confronted with great difficulties in the matter of accommodation. At Cambridge the radius within which undergraduates may reside has been extended. At Oxford an attempt is being made to economise space by the joint use of studies or sitting rooms, while Keble College is reported to have set up an army hut in its quad, a device which may serve to temper the architectural features of the place. At some of the modern Universities the crowd of students is so great that the authorities find themselves unable to organise lectures and classes on the old lines. Time tables have to be completely altered and make-shift arrangements provided. A freshman at a modern University tells us that the first three weeks of the term were completely wasted. It would seem that peace found our academic organisations quite unprepared.

### Shakespeare's School.

The Governors of the Grammar School at Stratford-on-Avon are appealing for the sum of £150,000 to enable them to carry out an interesting scheme. It is proposed to acquire certain land which lies behind the present school and to erect thereon a modern building while preserving the old school intact. The proposal includes a plan for bringing American boys to Stratford and for sending English boys to American Universities at the end of their school career. It is hoped to enlist the help of wealthy Americans in the scheme.

### The Correspondence Plague.

The Headmaster of one of our best-known public schools has sent out a circular to the parents of his boys asking them to refrain from sending letters on school business during the Christmas and Easter holidays and during the month of August. This moving plea for a respite from the plague of correspondence recalls a story of Charles James Fox, who is said to have placed the following notice outside his door at the Foreign Office: "No letters received here on Mondays, Tuesdays, Wednesdays, Thursdays, Fridays, or Saturdays, and none answered on any day."

## BLUE BOOK SUMMARY.

### Secondary School Regulations.

The Board of Education announce that the Draft, dated 26th May, 1919, of the Regulations for Secondary Schools, England, 1919, has been published during the required period and has now been confirmed by the Board without amendment. The Draft now becomes the Regulations for Secondary Schools, England, 1919, dated August 27th, 1919, and copies can be purchased through any bookseller (price 2d.), or directly from H.M. Stationery Office, Imperial House, Kingsway, London, W.C. 2 (price by post 3d.).

### Health Visitors.

The Board have issued draft Regulations for the training of Health Visitors (Cmd. 255. Price 1d. net.).

In the Prefatory Memorandum it is pointed out that the efficient discharge of many of the powers and duties of Local Sanitary Authorities and of Local Education Authorities for promoting the health of the population, and especially of children, depends in a large measure upon the existence of an adequate supply of women qualified effectively to undertake home visiting and other responsible functions in connection with Maternity and Child Welfare Work, the School Medical Service, and other local health services.

After pointing out the need for special training for this work the Board state that in consultation with the Ministry of Health they have prepared regulations under which courses of training for Health Visitors will be approved. The standard thus laid down is the minimum, and it is presumed that many Local Authorities will expect their Health Visitors to hold additional qualifications. In some districts the duties are performed by district nurses, whose training has been of the usual medical kind, but for the ordinary Health Visitor a specialised course in nursing and midwifery is not considered essential, although instruction in the care of maternity and of the newly born child is necessary.

The course for the Health Visitor is designed to cover two years, and the minimum age at entry is 18. Students are expected to have received a good previous education, preferably a secondary school education, up to the age of 18, but no examination qualification is demanded at present. Shortened courses may be taken by fully-trained nurses who desire to become Health Visitors, by University graduates, or by students who have already worked as Health Visitors for not less than three years.

No course of training will be recognised unless the institution is in a position effectively to control the whole of the students' course. As a rule, courses must be conducted by, or in close association with, a University institution. Before the completion of the course each student will be expected to take an approved examination, of which the primary purpose will be to test the extent to which the student has benefited by the course. This examination will be partly written and partly oral. It will not be conducted by the Board, but by a special examining body approved for the purpose. It is expected that recognised institutions will combine to establish a joint examining body, and except in the case of a University the Board will not approve a proposal for an institution to examine its own students. Grants will be payable on account of students taking approved courses, namely, £40 in respect of each student taking a full course, and £20 for a shortened course.

### Juvenile Organisations Committee.

This body, which was appointed by the Home Secretary in 1916, has been transferred from the Home Office to the Board of Education.

The Right Honourable J. Herbert Lewis, M.P., Parliamentary Secretary to the Board, has taken the place of Dr. A. H. Norris, who remains a member of the committee, as Chairman. Mr. C. E. Clift is Organising Secretary, and the Secretary is Mr. R. S. Wood, to whom all communications should be addressed at the Board of Education, Whitehall, S.W.1.

### Teachers' Pensions—Qualifying Service.

The Treasury have, on the recommendation of the Board of Education, declared the following to be Qualifying Service for the purposes of the School Teachers (Superannuation) Act, 1918.

Our readers should note that Qualifying Service does not add to the amount of a pension or lump sum, but enables a teacher to **qualify** for a pension, etc., who would otherwise not be able to do so.

### TEACHING SERVICE.

#### (1) SERVICE PRIOR TO APRIL 1, 1919.

Service in any of the schools represented on the Head Masters' Conference or the Incorporated Association of Head Masters, or the Association of Head Mistresses, or the Conference of Catholic Colleges or Schools represented on the Association of Preparatory Schools. In addition, service in schools recognised under the Board of Education Act, 1899, for the purposes of Column B of the Teachers' Register, and also any service which is accepted by the Teachers' Registration Council set up under Section 16 of the Education (Administrative Provisions) Act, 1907, as teaching experience which qualifies a teacher for registration.

The same regard will be paid to continuity as in the case of recognised service (see Section 18 (vi) of the 1918 Act) and a School which, at any given date, is found to be satisfactory from the point of view of qualifying service will be assumed, in default of evidence to the contrary, to have been previously satisfactory, so that previous service in that school shall be treated as qualifying.

#### (2) SERVICE AFTER APRIL 1, 1919.

Service in any school or educational institution with regard to which the Board are satisfied, either by a certificate from an Inspector of the Board or of a Local Education Authority or University, that it is making satisfactory provision for the education of the scholars.

#### (3) SERVICE EITHER BEFORE OR AFTER APRIL 1, 1919.

- (i) Service in any University or University College.
- (ii) Service in any school receiving grants from or provided by a Government Department other than the Board of Education (this would include schools receiving grants from the Board of Agriculture, Poor Law Schools receiving grants from the Local Government Board, and schools at present maintained by the Ministry of Pensions and other Departments).
- (iii) Service as a Supplementary Teacher in a Public Elementary School.
- (iv) Service as a teacher in any Educational Institution in receipt of grants from the Government in any other part of the United Kingdom.
- (v) Service as a teacher in any School or other Educational Institution in any British Colony or Dependency or in India, which is maintained, aided, or under regular inspection by the Government.
- (vi) Service in any foreign country undertaken under the arrangement for the interchange of teachers, which was made by the Board of Education some years ago.

**The foregoing relates to teaching service; the question of what non-teaching service can be treated as qualifying is still under consideration. Also the list does not aim at being exhaustive, and no doubt other cases of service, which should be regarded as qualifying, will come up for consideration.**

**ASSOCIATION NEWS.****The Teachers' Council.**

The number of applications for registration is now well beyond the thirty thousand mark, and the daily rate continues to increase. A marked impetus to the movement will probably follow the action of the Board of Education in deciding, with the concurrence of the Treasury, to accept as qualifying service for pension purposes the teaching done by Registered Teachers before April, 1919. It is not unlikely that some qualified teachers who are now engaged in private schools will desire to transfer to State schools. Work in the latter will count towards a pension but a total service of thirty years will be necessary to qualify. Hence in making up this period service in non-state schools should be reckoned, and it can be reckoned if the teacher is registered. A gratifying result of the Council's work is seen in the project for setting up schemes of training for specialist teachers. Various musical institutions, including the Royal Academy of Music and the Royal College of Music, have had their schemes for training teachers approved by the Council, and it is understood that in other branches of specialist work wherever professional training has hitherto been unknown, efforts are being made to provide systematic training. This is being done in order that teachers may be able to fulfil the conditions which come into force at the beginning of 1921.

**The College of Preceptors.**

At the meeting of the Council of the College, held on Saturday the 25th of October, the Finance Committee presented a very satisfactory report, showing that the work of the College continues to attract support. In view of the possible effects of the recent educational legislation it is important that all efficient private schools should unite, and the College of Preceptors forms an appropriate centre for such unity, since it was founded by private school teachers long before there was any attempt to provide state secondary schools. The College works in close and cordial co-operation with the Private Schools Association, and serves as a link between that body and other associations of teachers. It should be understood that the College includes in its roll of members teachers in all types of schools and institutions.

**National Association of Schoolmasters.**

As a counterpart to the National Federation of Women Teachers there has been formed a National Association of Schoolmasters. The distinguishing feature of these bodies is to be found in their attitude on the question of "equal pay," the latter opposing equality no less vigorously than the former support it. Both are agreed in their desire to damage the larger associations to which their members have hitherto belonged. The Federation of Women Teachers' advocates secession from the N.U.T. on the ground that although that body accepted the principle of "equal pay," certain of its Executive are lukewarm on the question. The Association of Schoolmasters, on the other hand, is advising men to withdraw from the London Teachers' Association because this body has decided to press for "equal pay." If this strange temper of mind prevails and extends we shall presently have as many associations as there are teachers.

**The Assistant Masters' Association.**

As an offset to the tendency to separation recorded above it is pleasant to see that the four major Secondary School Associations, namely the Head Mistresses, Assistant Mistresses, Headmasters, and A.M.A., have formed a joint committee with Mr. R. F. Cholmeley as Chairman. This committee has already accomplished some excellent work, notably in regard to amendments to the Pensions Act. It will probably form a nucleus at least of a Burnham Committee on Salaries in Secondary Schools.

**PERSONAL NOTES.****Professors Stewart and Trail.**

The cause of Scottish education loses through the death of Emeritus Professor Stewart, of Glasgow, and Professor Trail, of Aberdeen University. The former as Professor of Divinity and Clerk of Senatus played a prominent part in teaching and in administration up to the date of his retirement in 1910. Professor Trail was a highly distinguished graduate of Aberdeen, and was elected Professor of Botany in 1877, while still in his 26th year. He did much to encourage the study of Botany in Scotland, and was a prolific writer to scientific journals.

**Dr. J. F. Gemmill.**

Dr. J. F. Gemmill, of the Glasgow Provincial Training Centre, has been appointed to the chair of Natural History at Dundee University College, vacant through the transference of Professor D'Arcy Thompson to St. Andrews. Dr. Gemmill has been prominent in connection with the Marine Biological Station at Millport (Cumbrae).

**Mr. W. H. Doyle.**

Alderman Cook, Chairman of the Bristol Education Committee, referred to the long and valued service rendered by Mr. W. H. Doyle, assistant secretary for Higher Education, who is resigning his post at the end of October. Mr. Doyle was fourteen years Headmaster of Langton Street Wesleyan School and for five years Secretary of the Technical Instruction Committee of the City Council before taking up his present appointment in 1905.

**Mr. W. Norman Bailey, M.A., M.Sc.**

Mr. Bailey was formerly a scholar in the Cosnett Council School and was awarded a junior exhibition by the Durham Education Committee. At Trinity College, Cambridge, he graduated with first class honours in the Mathematical Tripos. During the war he was stationed at the Royal Naval College, Greenwich, taking his London B.Sc. degree, and becoming naval instructor for three years on H.M.S. St. Vincent. Since that time Mr Bailey has taken his M.A. at Cambridge, his M.Sc. at London, and has been appointed Mathematical Lecturer in the University of Birmingham.

**Mr. J. T. Francombe, J.P.**

Mr. Francombe, sometime headmaster of St. Mary Redclyffe School, Bristol, and now a member of the City Council, has been selected by the committee of the Corporation for nomination to the office of Lord Mayor of Bristol for the forthcoming year.

**Dr. Foligno, M.A.**

Dr. Foligno was recently appointed Serena Professor of Italian at Oxford. He is forty-one years of age and was educated at Milan University. He fought in Italy as a cavalry officer during the War and wrote the official accounts of the work done by the Italian cavalry.

**Sir Alfred Dale.**

Sir Alfred Dale, on retiring from the Vice-Chancellorship of Liverpool University, has severed his connection with the Liverpool Education Committee. Alderman J. W. Alsop, the Chairman, conveyed to Sir Alfred Dale the thanks of the Committee for services rendered since 1902, particularly in connection with Secondary Education, at the same time expressing the hope that he would enjoy many years of health and happiness.

**Mr. J. W. Hands.**

Captain H. Hincks has been appointed by the President of the Board of Trade to succeed Mr. J. W. Hands, O.B.E., as Controller of the Profiteering Act Department. Mr. Hands accepted the post of Controller during the organisation of the Department at the request of the President, and has now resumed duty in the Board of Education.

## NEWS ITEMS.

**The Birmingham Convention.**

One hundred and twenty-five Associations, with a membership of 40,000 teachers, sent representatives to Birmingham to demand that no final agreement should be made by members of the N.U.T. Executive with the representatives of Educational Authorities on the Standing Joint Committee on Salaries until the proposals have been placed before the teachers in conference for consideration; to demand also that the strike weapon should not be surrendered; to endeavour to secure the adoption of a National Scale for Assistant Masters in primary schools, of £200, rising by £25 annually to £450; and to make arrangements for using the machinery of the N.U.T. to give effect to the decisions of the Convention.

**A Royal Gift.**

The Queen has presented to the London Education Committee some photographs from the colonies. In 1901 the King and Queen made a colonial tour, and these interesting photographs, now contained in eleven large albums, were then taken.

**The School of Librarianship.**

Sir Frederick Kenyon, Principal Librarian of the British Museum, opened the School of Librarianship in connection with University College, London. Most librarians are alleged to be amateurs, and the idea is that a training is necessary for those who adopt the occupation as a profession. The Carnegie Trust are supplying £1,500 yearly for five years, so that suitable teaching may be given to librarians, existing and future. At present there are about seventy students under the direction of Dr. Baker, assisted by Mr. L. Newcombe.

**Open-air Camp School.**

The L.C.C. Education Committee have bought Wanstead House, Margate, to use as an open-air camp school for weak and ailing children. The capital required was about £6,000, and the accommodation is for eighty children, who will be sent in parties for a month at a time.

**Kentish Pottery.**

The Kent Education Committee held an exhibition at Sevenoaks of household pottery brought from Europe and Africa, and lent by the owners. Some specimens of English village pottery were on view. In the Maidstone Museum may be seen samples of Kentish pottery 1,500 years old, and the object of the exhibition was to arouse interest and to revive the lost art. Suitable clay is to be found in the immediate neighbourhood. The exhibits were well shaped, of good colour, and cost little. At a subsequent conference with Lord Sackville in the chair a potter showed what he could do even without a wheel.

**Committee Meetings on Sunday.**

The Secondary Education Sub-Committee of the Darlington Authority were called together on a Sunday to instruct the Borough Surveyor to prepare plans for additional class-room accommodation and also to take steps to provide a hut to house the caretaker, newly-appointed. The business was neither urgent nor important, so that a very strong protest against Sunday meetings being raised by Alderman Leach resulted in the minutes being referred back by eight votes to six.

**The Premier's Old Schoolmaster.**

Mrs. Lloyd George presided over the annual concert of the Llanystumdwy Institute and presented a photograph and a purse to Mr. Thomas Griffiths, the headmaster of the Prime Minister's old school.

**Uses for a School.**

Willesden High School has been used as a concert hall, recruiting office, billiard saloon, and meeting place for Quakers and Theosophists, and has now become a studio for a firm of film producers.

**Equal Pay for Men and Women.**

The London Branch of the Schoolmasters' Association in general meeting assembled called upon its members to withdraw from the London Teachers' Association because this body has adopted the principle of equal pay. The men say that the adoption of the same scales of salaries for men and women would ultimately mean that the education of children would be entirely in the hands of women.

**Home Schools.**

One curious result of the lack of housing accommodation is that many parents have been compelled to find home schools for their young children and babies.

Many mothers left their houses when the fathers joined the Army, and now only furnished rooms are available, children not being wanted, so that particularly in the country districts near to London places are being established where children can stay all the time, including holidays, and scholastic agents are having difficulty in supplying the demand for such "home schools."

**Crowded Universities.**

Both at Oxford and Cambridge a very much larger number of students are in residence than the normal, and the available accommodation is being strained to the utmost capacity. Cambridge undergraduates may now lodge two and a half miles from St. Mary's Church, and Oxford students are allowed to reside within a radius of three and a half miles of Carfax instead of one and a half miles as before. The authorities of Keble College have erected a wooden building of army huts in order to add to the number of their rooms.

**Teachers and Trade Unions.**

The Congress of Teachers' Friendly Societies held in Paris decided by 170 votes to 43 on the affiliation to the General Confederation of Labour of the teachers' trade unions.

**Some Appointments.**

Dr. Peter Giles, Master of Emmanuel College, as Vice-Chancellor of Cambridge University.

Mr. D. McBennett Melville Jones, of Emmanuel College, Cambridge, as the first Francis Mond Professor of Aeronautical Engineering at Cambridge University.

Dr. W. E. Agar, Lecturer in Zoology in the University of Glasgow, as Professor of Zoology in the University of Melbourne.

Mr. E. W. E. Kempson, as H.M. Inspector of secondary schools in Essex.

Mr. W. Coates, Assistant Education Secretary, Wigan, as Secretary for Elementary Education under the Hampshire County Council.

Mr. D. W. Bevan, as Headmaster of the Scarborough Municipal Secondary School.

Mr. J. H. Taylor, University of Leeds, as Director of Humanistic Studies in the Huddersfield Technical College.

Mr. H. G. Taylor, M.Sc., King's College, London, as Head of the Engineering Department at the Technical School, Leicester.

Mr. Samuel Rutter Wood, M.A., of Woolly, near Wakefield, as Headmaster of the Ilkeston County Secondary School.

Mr. G. F. Troup Horne, as Secretary to the Birkbeck College.

Mr. J. F. Judson, Headmaster of Tideswell Grammar School, has been appointed Headmaster of Buxton College. Mr. F. Lawson, the late Headmaster, was killed during the war.

## LITERARY SECTION.

### BOOKS AND THE MAN.

#### Text-Books for the New Era.

For nearly five years we were being told on every hand that the war would bring about a new world, that old things would pass away and that mankind would enter upon a new era of brotherhood and progress. Undoubtedly there was abroad a new spirit, a desire to translate into corporate action that impatience with the existing order which was felt occasionally by even the mildest-tempered and the most conservative of minds. The time spirit seemed to summon us to a new effort to realise ideals which had hitherto seemed remote and to overcome the inertia which had prevailed over our fleeting moods of revolt. To adapt Plato's well-known metaphor it seemed that that sluggish creature, the Commonwealth, would show signs of becoming at last active under the provocation, not of one but of many gadflies. Even the hardened cynic took to watching, with awakened interest, the twitchings and tremors on the surface of its skin or began to wonder whether his cynicism was justified when the creature flicked its tail now and again. He wondered whether these symptoms were really preliminary or premonitory, whether they foretold a new activity or whether the twitchings and restlessness would die down even before the creature had turned in its sleep.

Peace has been signed, the New Era has dawned, and the New Spirit undoubtedly remains, strengthened and made more insistent by the experiences of the past five years. It is seeking the means to make itself articulate and operative. Unhappily the means are not available. The unrest among manual workers of every grade might have found useful and smooth outlets through the medium of Industrial Councils—had these been established. Our difficulties in national finance might have been lightened by a just system of taxation—had one been sought for and applied. The task of restarting our industries might have been rendered comparatively easy—had we been willing to exercise foresight. The rightful claims of the "excluded classes" to a share in culture and refinement might have been fully recognised had we the courage to apply the Education Act, just as the claims of our returned soldiers to house room might have been met if we had devised and applied a housing measure with due regard to economic laws and social needs.

Such national failures to rise to the level of a great need and an unexampled opportunity are in some degree offset by the efforts of individuals and of groups. The leaven is working, although it has not yet permeated the whole mass of the body politic. Despite the Government's failure to fix an appointed day for abolishing "half-time" and for starting day continuation schools both reforms are being put into operation in individual instances. Enlightened employers are starting continuation schools on a basis which is voluntary so far as they are concerned, but obligatory in regard to their youthful workpeople. Nor are teachers outside the stream of modern tendency. Ordinarily their work involves a tendency to fall into grooves of thought and into set methods of teaching. This tendency is strengthened by the progressive development of the machinery of central and local administration with its inevitable regard for precedent and its affection for routine and orderly procedure. Such attendant circumstances of the teacher's calling have encouraged indolence of mind and have served to smother very promptly the enthusiasm of bold spirits with a passion for asking troublesome questions or a zeal for trying new methods. The war has helped us to revise our old dogmas, however, and set afoot a new spirit of investigation which has been reflected, not only in the proceedings of various committees of enquiry, but also in the administrator's office and in the school class-room.

At the beginning of the year Messrs. Hodder and Stoughton issued a noteworthy volume of essays edited by Professor Adams under the title "The New Teaching." They have now followed this up by a series of text-books, of which two have come into my hands. One deals with the Foundations of Engineering, and is written by Mr. W. H. Spikes, the Editor of the Series. The other is on Citizenship, and is written by Mr. F. R. Worts, Senior History Master in Bristol Grammar School. The price of each volume is 4s. 6d. net, and I commend them heartily to all teachers. They embody and illustrate the new and fruitful idea that text-books should be written and used in order to promote a knowledge of the subject instead of an acquaintance with examination difficulties. They are essentially modern, since they aim at relating school learning to the experiences of ordinary life. Thus in the Foundations of Engineering we have a series of chapters on mechanics, but Chapter 5 tells about us the steam engine, with some stimulating remarks on the effect of traction on design. This is an illustration of the author's method, and it indicates also the wider scope possible for the book. I conceive it to be very useful in continuation schools and technical classes, for it is well within the range of ordinary men and women, who will be enabled to think of their surroundings in a more intelligent way. The same method of approach is adopted by Mr. Worts in his book on Citizenship. The facts are taken from life itself, principles are arrived at, and they are applied to real problems such as the reader knows at first hand. Thus, after a chapter on Local Government the student is invited to answer this question: "Why should museums and parks be under public control?"

The style in both volumes is simple and clear and the writers have combined regard for accuracy with an avoidance of pedantic terms in an admirable fashion. They have, in fact, begun to beat a trail which it is to be hoped that many teachers and writers of text-books will follow. The modern spirit in education demands that all forms of teaching shall be related to life more closely than hitherto. This is not to say that our schools are to become narrowly vocational, but rather that they are to be places of humane learning in the fullest possible sense. Human affairs become ever more complex, the range of man's knowledge is for ever extending, and it is the business of the school to prepare its pupils to meet and cope with the new conditions. An intelligent effort in this direction will have the result of introducing a new interest in education, one which will be felt by the public as well as by the teachers and their pupils. In place of childish and often futile attempts to make our teaching interesting by the addition of a pleasant flavour or irrelevant matter we shall be led to depend on the genuine interest which accompanies the certainty that we are learning something which will help to explain the world about us, not only the world of nature but also that of humanity. It is matter of self-reproach for teachers that we have so often failed to make our pupils care for knowledge. We have made them care for success in examinations, for outstripping competitors in study or in games, and for the social distinction which attaches to membership of a given school or University. More than these are wanted. We must lead them to value knowledge for its own sake, to be eager in seeking for explanations of things about them, to be quick in perceiving the relations between facts and the relative importance of the facts themselves. To attain these things we must be prepared to look at our task from a fresh angle and be willing to abandon the formal and ritualistic pedagogy of our youth. The "New Teaching Series" promises to help us in doing this, and for that reason I hope it will be extensively used in our schools.

SILAS BIRCH.

## REVIEWS.

## Education.

SCHOOLS OF TO-MORROW IN ENGLAND: by Miss Josephine Ransom. (Bell and Sons. 1s. 6d. net.)

In this paper-covered booklet of 154 pages Miss Ransom gives an account of some fifteen experimental schools, the sort of institutions that are sometimes unkindly called "freak schools." She takes a very broad view, sees the good in all that she describes but is not at all inclined to dogmatise in favour of any particular form of school. What she pleads for is freedom of experiment and breadth of view in evaluating the results of honest even if heterodox investigation. Miss Ransom has an easy descriptive style, and has provided a pleasant and useful account of educational work that would otherwise escape the attention of the public, since but for Miss Ransom's timely book it would have to be sought out in all manner of little known sources.

ADVANCE IN CO-EDUCATION: articles by various authors. Edited by Miss Alice Woods. (Sidgwick & Jackson, 3/6 net.)

We have here within the space of 154 pages the problem of co-education presented from many different points of view, to be exact thirteen, not including the introduction by Mr. Homer Lane. Perhaps the best chapter in the book is that on Principles, supplied by the editress herself. With regard to the rest it has to be admitted that little is added to what we know of the subject. On the other hand there is a certain interest in seeing the various aspects the matter assumes in the hands of the individual writers. Many of them are feminists, but Miss Maude Royden is so deeply committed to feminism that she can only express her doubts and difficulties, and needs the help of Mr. John H. Bradley to reconcile her to accepting the co-education principle, and it is doubtful whether he has succeeded. Other chapters are written by people who represent fairly enough the view points of the parent, the former schoolboy, the former schoolgirl, the elementary school, the university, the psycho-analyst. Mr. Cecil Grant deals acceptably with the delicate subject of Purity. Mr. and Mrs. Platt write convincingly on the Human Aspect, and Miss Edith Flower presents the problem as it appears in countries other than England. A book of this kind would be hopelessly incomplete without the *imprimatur* of Mr. John Russell, so he brings the discussion to a close with an optimistic chapter on hopes, in which he speaks about the "traditional insincerities," among which he includes the birch. This is the first charge of insincerity I have ever heard lodged against this very downright implement. But Mr. Russell evidently means his protest seriously, for he speaks of "our so-called punishments."

With such a large team made up of such diverse elements it is obviously impossible to get an organised presentation of a case, and the editress has made no effort to bludgeon her contributors into conformity with any uniform "platform." She tells us that "Each is responsible for his or her own views." It is admitted in the preface that there are many gaps, and among these is specially mentioned the need for a fuller treatment of the objections raised by some of the psycho-analysts, who believe that the co-educationist is dealing with the problem on the lines of the person who afterwards explains that he thought the gun wasn't loaded. But in justice to the book it must be stated that Mr. Kenneth Richmond makes as satisfactory a statement of the psycho-analytical position as is possible in the space allotted to him.

PRACTICAL HINTS ON THE TEACHING OF LATIN: by L. W. P. Lewis. (Macmillan. 5s. net.)

A commendable feature of the Board of Education's activities is the provision of summer courses for secondary teachers. This book is the record of four lectures that were delivered in a Latin course at Ilkley in 1918 and 1919. The lecture form has been retained—on the whole with advantage. It is true that we have frequent references to examples that we are not privileged to see, but the very references give a guarantee of the thoroughness of the basis on which our author worked, and in any case they make the reader feel that he is dealing with living

realities. Further, the lecture form allows a certain amount of vivacity that the author indicates he would have been afraid to display in the more formal presentation of premeditated print.

Writers on Latin would be well advised to get on with their work, and take it for granted that Latin is worth teaching. Too many of them persist in following the example of Professor Bennett and introducing a more or less elaborate "Justification of Latin." Even in the eminently practical treatment before us we have an Introduction by a well-known headmaster that rouses sleeping antagonisms. When Mr. Lewis himself gets at his subject he displays an attractive confidence in his own point of view. He believes that training colleges do good in their way, but are liable to overdo their work of reducing teaching to a matter of principles. But like all successful teachers he has himself a set of principles on which he lays considerable stress. Not that he is dogmatic in a disagreeable way, though now and then he makes the categorical statement that those who disagree with him are wrong. If a teacher can say, as he does, "I always have a perfectly clear-cut scheme in my own head" the ordinary theorist, of whom he is so suspicious, may quite cheerfully accept him as a fellow theorist. The slight disparagement of theory that runs through these pages will do little harm, for two reasons: first, because Mr. Lewis is himself busy theorising all the time, and secondly, because the people who have enough interest to attend his lectures or to read his book have by that very fact given evidence that they can appreciate theory. Indeed, he himself recognises this in his most flagrant tilt at the theorist. He lays down the alarming doctrine "Do not prepare your lesson beforehand," but goes on at once to explain that he realises the danger of his thesis, points out that he can trust his hearers not to misunderstand him, and that he would not give this startling advice to everyone. As a matter of fact all that his heresy amounts to is that he does not want the teacher to prepare in such a detailed way as to imperil this freshness of presentation, in which all good teachers are on his side. One other principle on which Mr. Lewis lays great stress is the impulsive power of the pupil's sense of achievement. The encouragement the boy gets from observing his own progress has been, our author tells us, scarcely noticed by writers on education, and in any case he makes capital use of this motive power. As a matter of mere theory Mr. Lewis is a little confused in his use of the term *interest*, but from internal evidence it is clear that he himself is an intensely interesting teacher. He has constant references to the "fun" of the schoolroom, the "rattling fun": being "out of the fun" is held up as the practical deterrent to slackness. Altogether, the reader of these pages will feel inclined to envy the Latin hour at Bradford Grammar School.

What will commend this book to the practical teacher is the large number of "tips" it contains. The word is actually used in the text, and Mr. Lewis is wise in his generation in thus meeting the wishes of his potential readers; for there is nothing quite so attractive to the practical teacher as "tips." Lectures on the principles of education will draw only their dozens, while the tip-provider draws his hundreds. But it is not to be inferred that Mr. Lewis gives mere tips. In spite of himself, being the reasonable man that he is, he cannot avoid dealing with his subject in a broad and thoughtful way. Every one of his tips is capable of rational justification, and in most cases the justification is actually supplied. Though Mr. Lewis does not agree with the Direct Methodists, he has evidently some sympathy with them; indeed it will strike the reader that few people would be quite so much at home in the Perse School as the author of these four lectures.

A pleasing feature of the book is its optimism. Mr. Lewis has the fullest confidence in the boys' willingness to work, though a lingering doubt is perhaps suggested in his parenthesis, "Yorkshire boys at any rate." But when it comes to the desire of getting on he has no doubt left. All boys "are anxious to get on. If anybody tells me anything different I don't believe it." It is bracing to read "Boys do not want to cheat and deceive you at all, unless you are incessantly suspecting them."

Apart altogether from the admirable technical advice as to procedure during the four year Latin course, the book is a necessary spur to the slack teacher and a joy to the keen one.

CATHOLIC EDUCATION. A STUDY OF CONDITIONS: by Rev. J. A. Burns. (Longmans. 6s. net.)

Roman Catholic writers usually appeal to members of their own communion, but Dr. Burns tells us that he has "also had in mind non-Catholics who are desirous of being fully informed about Catholic education." We have certainly a good deal to learn from our Catholic friends about the spirit of self-sacrifice in the matter of maintaining a system of education by subscription, while paying their share of the cost of the public system. We are not here concerned with the political aspect of the matter, so we can admire the spirit in which Dr. Burns sets forth the Catholic position with regard to "atmosphere." The book, however, lives up to its sub-title, and deals with the conditions. Here we have something to learn. It is true that the data are obtained from transatlantic sources, but professional teachers in Britain will do well to consider the points of advantage of the Catholic system. Dr. Burns claims that since so many of their teachers are dedicated to their work, and accordingly have a longer "professional life," there is a likelihood that the standard of experience will become increasingly superior to that of the state teachers, with the probable result that in the future the Catholic parish schools of America will forge ahead of the public schools. "The vast majority of those engaged in Catholic schools and colleges are men and women who are devoted to the service of religion by profession. . . . They teach without any personal remuneration." This to a large extent accounts for the comparatively small cost of the very extensive Catholic school system in America. In view of the claim to at least equality of efficiency with the public schools it is startling to read "It costs, generally speaking, only about one-third as much to maintain a parish elementary Catholic school as it does to maintain a public elementary school, and the same proportion holds good in the case of Catholic high schools and public high schools." There is material here for serious reflection. The treatment of collegiate, seminary, and university education is equally interesting, and we non-Catholics will do well to accept Dr. Burns' invitation and make ourselves acquainted with the real state of affairs in the Catholic educational organization.

C.C.C.

EDUCATION FOR THE NEEDS OF LIFE: by Irving Elgar Miller. (The Macmillan Co. 7s. net.)

The sub-title of this book runs: "A Text-book in the Principles of Education." It is intended for use in elementary classes in normal schools and colleges, and in institutions and reading circles. But since there are now quite a crop of books with the same title, "Principles of Education," it has become necessary for writers to differentiate their work by selecting some particular angle from which the subject may be viewed. In the present case the Spencerian aim of education has been accepted, and forms a very satisfactory basis for classification of the material to be presented. The scope of the whole may be gathered from the headings of the six chapters into which the book is divided: (1) The Biological Point of View in Education; (2) The Meaning and Aim of Education; (3) The Child; (4) The Curriculum; (5) The Principles of Method; (6) The Teacher. The third and sixth chapters form complementary studies of what may be called the natural history of pupil and teacher; the chapter on the Curriculum indicates the instrument of education; and the longest chapter in the book, that on Method, shows how that instrument is to be used. There is nothing particularly new or striking in the text, but the matter is presented in a thoroughly effective way, and the book should prove a very useful one. Its author is a competent psychologist, and writes this unpretentious volume out of abundance of knowledge. He has hit upon a modification of the rhetorical question. At the beginning of each chapter he supplies a list of questions, which he tells us are not intended to be put by the lecturer to the student, but are to be used as a means of rousing a certain amount of curiosity in the reader, which the following text will satisfy. It is not often that text-book writers are so successful as Dr. Miller is in satisfying the curiosity they have deliberately aroused. The usual lists of books for supplementary reading are thoroughly satisfactory in view of the type of reader to whom the book makes its appeal. There is a good index. Lecturers who find Bagley's *Educative Process* just a little too stiff for their students will find in this volume exactly what they want.

C.C.C.

INTRODUCTION TO THE SCIENTIFIC STUDY OF EDUCATION: by Charles Hubbard Judd. (Ginn and Co. 7s. 6d. net.)

Dr. Judd claims the right to speak of an educational science, since "the essence of science is its method of investigation, not its ability to lay down a body of final rules of action." This gives the key-note of the present work. The body of doctrine expounded is certainly vast enough to warrant the claim that in itself it constitutes a respectable *corpus* for any science. But it is far from limiting itself to "final rules of action." The subject matter that students of education have to deal with is in a remarkable fluid state, and the Director of the Education School of Chicago University is the last man in the world to seek to establish rigidity. Education is not so much a single discipline as "a group of specialised studies." Accordingly the purpose of this book is to set forth the fundamental problems of education and to indicate the various attempts that are being made to solve them. We feel ourselves to be in the hands of a master of his craft. With a total absence of dogmatism he describes facts and tendencies in a way that enables us to envisage the whole field of education, and to project ourselves to some extent into its future. There is no trace of partisanship, but every evidence of a keen desire to get at the truth in all directions, and to separate out and emphasize the things that matter.

The plan of the book is admirable. Dr. Judd gives up the traditional historical approach, yet he uses historical material wherever this is likely to help him in making his readers understand the present state of affairs; but that state of affairs itself is what he is primarily interested in bringing into prominence. He is anxious that, above all, those who use his book shall have the data of the problems clearly before their minds. To this end he adopts the plan of first-hand quotation from all manner of educational records. He does not merely refer to sources: he gives sufficiently long extracts to put his readers in possession of all the facts that are relevant to the point he is discussing. His sources are recently published educational books and pamphlets, reports by school superintendents, magazine articles, bulletins from the Washington Bureau of Education, and those educational "surveys" that are taking such a prominent place in American education. It is not to be supposed that we are treated merely to a colourless statement of other people's educational results. The running commentary is of the most suggestive kind. The reader is placed in the position of having all the facts before him, and at the same time getting just the necessary stimulus from a particularly vigorous and original mind. All the old familiar controversies find a place in these pages, but they are mercifully toned down by the mere fact that they are placed in their true relations to each other. Dr. Judd has been eminently successful in this most necessary work of introducing some sort of perspective into the study of the controversial elements in education. The field covered is so very wide that one might expect to find at least a trace of scarpiness, but the book is singularly complete. It does not, of course, say all that can be said on the various points raised, but it provides just the amount of material necessary for satisfactory study. The book admirably serves the purpose it has in view—the supply of a text for students. It leaves to the lecturer full scope for exposition and elaboration, and forms indeed an ideal basis for a university course in education. Since there is no pretence of supplying a philosophical basis of education it leaves ample room for the professor to exercise his ingenuity in gathering under his own philosophical scheme all the data—many of them distractingly inconsistent—supplied in the text.

At the end of each of the twenty-two chapters there is a section on *Exercises and Readings* that supplies just the sort of problems that are needed to stimulate teachers and students alike. As was to be expected from this author, the references for further reading are in the highest degree helpful. The only conspicuous omission is that there is no reference in the chapter on Play to the works of Henry S. Curtis.

Though intended as a college text book, the volume will be found both attractive and useful to all who are interested in education, even to those who are as *blase* on the subject as is the present reviewer. It is seldom that he has come across so stimulating a text-book, and at the present moment there is certainly no book available that is at the same time so compendious and up-to-date.

32, GREAT PORTLAND STREET, W. 1.

THE VOCATIONAL EDUCATION OF GIRLS AND WOMEN: by  
Albert H. Leake. (The Macmillan Company. 8s. 6d. net.)

Mr. Leake tells us that the primary purpose of his work is not to make original contributions to the subjects discussed, though he modestly hopes that "these are not absent." As a matter of fact, the book is bursting with valuable information accompanied by sensible critical comment. After a general introduction in which the usual platitudes are set forth with merciful brevity, Mr. Leake gets at his real subject, which he treats in two parts, each of about 200 pages. Part I deals with *Education for the Home*; Part II with *Women in Industry Outside the Home*. After discussing the status of Instruction in Household Arts, Mr. Leake goes on to an examination of the way in which this instruction is carried on in elementary and in high schools. He next proceeds to expound how this instruction is carried on at home, in evening classes, and in various types of schools such as the prevocational, the home-making, and the trade schools. Part I finishes with an intensely interesting chapter—*The Boycott of the Kitchen, or The Domestic Servant Problem*. The ordinary intelligent English housewife will read this chapter with wonder and with profit. Part II will be found of the greatest service to all those concerned with the development of the newer type of schools that are to arise out of Mr. Fisher's Education Act. It is of the greatest possible value to have put before us the results of the wide experience of America. Whether we can apply directly to our own condition the results of transatlantic experience is another matter. In fact, it is encouraging to discover that in some particulars Mr. Leake finds it desirable to cite, with approval, what we have done on this side. Our London County Council and the School Board of Edinburgh have earned his warm praise, so we need have no loss of self-respect if we stoop in turn to learn from the United States in certain matters. One thing that will strike the careful reader is the similarity of the problems to be dealt with on both sides of the Atlantic. All our old difficulties recur in these pages. What is a skilled occupation? How are we to train for trades and yet keep on friendly terms with the Trades Unions? For a trade teacher, are we to have an expert workman with a veneer of professional training as teacher, or a trained teacher who has had a veneer of trade training? These questions and scores like them are all here, and are treated in a way that English readers will find very instructive. In many ways the Americans are ahead of us in the matter of vocational training and vocational guidance. On this latter point it is interesting to find with what suspicion such guidance is regarded in the States. The fear of exploitation of the young people seems to loom very large in the minds of social reformers over there. One is tempted to go on illustrating points of resemblance and difference between our problems and the Americans', but space prevents me from doing more than call attention to the fact that in these pages we find exemplifications of all the criticisms recently passed by London employers on the products of our schools, and, what is more, the text supplies suggestions for meeting many of these criticisms. Our English Education Authorities will be well advised to secure copies of Mr. Leake's book, and get their officials to make suitable extracts from it, and to proceed in due course to make the necessary applications to our home needs.

About: *LES JUMEAUX DE L'HOTEL CORNEILLE*. (Translated by C. W. Bell.)

W. W. Jacobs: *SELECTED STORIES*. (Translated into French.)

Storm: *IMMENSEE*. (Translated by C. W. Bell. Harrop & Co. 1s. 6d. net.)

"Start with definite knowledge; with a translation. In self-study, without any help from a teacher, the first requisite is to start with a definite and exact knowledge of [the meaning of] every sentence in the texts. This should always be aimed at under all circumstances; but it is doubly important when the learner has to depend on his own vigilance in detecting any mistakes he may have fallen into. . . . The beginner should from the first provide himself with a fairly literal translation.

. . . At the beginning he should make a point of reading each sentence in the translation before he begins to read and analyse the corresponding passage in the original. . . . The objection to schoolboys using 'cribs' is purely a practical one, namely, that they are apt to learn the crib by heart instead of comparing it with the original. . . . It need hardly be said that an intelligent teacher will have no difficulty in testing the soundness of their analysis, whether they have used a translation or not."

HENRY SWEET: *Practical Study of Languages*.

The truth of the last sentence is so obvious that we are afraid the real reason that has operated to deny schoolboys the intelligent use of a translation is a false view of the way to get moral discipline out of particular studies—the view that favours the intrusion of gratuitous difficulties. A classical master at an English public school was heard to say, "It's a curious thing I can read my Homer more easily than anything else in Greek, and yet I went through it all at Oxford just with a translation—a most reprehensible procedure!" Morally reprehensible, of course, is what he meant. This pseudo-moral bias inclines one to view the discovery of the meaning as the chief exercise in language-study, and to give only a subordinate place to learning the original by heart, whereas to one whose immediate aim is not moral gymnastic but the acquisition of the language, it must be clear that knowledge of the meaning is a mere preliminary to committing the text to memory—not of course long passages, but the individual sentences (or even smaller word-groups). Anyone who realises this will naturally desire to spend as little time as possible on this mere preliminary. He will demand a translation for himself, if a learner; he will explain the meaning to his pupils if he is a teacher, giving them, of course, regular exercises in making out the meaning for themselves when they are sufficiently advanced to do this without consulting the dictionary two or three times in every sentence.

The only thing we quarrel with in Sweet's directions is the expression "a fairly literal translation." "Fairly literal" is vague enough. If it means that the standard of expressing in the language of the learner the exact meaning of each whole sentence in the original is to be forsaken in order to show the learner which word means which, we can only say that this is the function of the notes—not of translation, though the notes may in some cases take the form of an absolute word-for-word translation. Thus in translating from the Chinese, it may be useful to supplement the true rendering, "Will you have a pipe?" with the word-for-word version, "You eat tobacco, not eat?" But the *prime* necessity is the true rendering, "Will you have a pipe?" The other cannot be called a translation at all. It is merely an explanatory comment valuable in assisting the student at some future time to make new sentences on the same model.

The worst translation of all is the "fairly literal." As a translation of *Je me demande*, "I wonder" enables the learner to acquire the French equivalent for the phrase in which he will think; while, "I me ask" has the advantage of showing the normal meaning of each word in the expression. "I ask myself" serves no useful purpose at all.

We are glad to find that the translations before us (original on the left-hand page, translation on the right) strive, and with no small measure of success, not after the "fairly literal" but the true idiomatic rendering.

B. Méras and E. J. Meras: *FRENCH VERBS AND VERBAL IDIOMS IN SPEECH*. (New York: The Macmillan Company. 3s. 6d. net.)

The fairest way to comment on this production is simply to describe it. There is an introduction giving the tense uses of the French verb (including the tenses not used in conversational French at all), then seventy-seven lessons and a vocabulary. Each lesson consists of (1) the principal parts of some verb, (2) some phrases in which the verb is used, (3) thirty to forty disconnected illustrative sentences to be translated from English into French. Thus: 1. I am going to tell you a story. 4. Are you not going to tell us a story? 6. He is well. 7. My honour is at stake. 8. Nonsense! (Allons donc).

(Continued on page 424.)

**HERBERT RUSSELL'S  
LIST.**

COMPLETE CATALOGUE POST FREE.

**ANCIENT CIVILISATION SERIES.**

By EMILY M. BURKE, L.L.A., Senior Mistress, Hornsey County School.

BOOK II.—**THE VIOLET CROWN AND THE SEVEN HILLS.** With 11 Maps illustrating the text. Crown 8vo, cloth. 177 pp. Price 3s. net. **Just Published.**

"This is the story of the glory that was Greece and the grandeur that was Rome. . . . Miss Burke's is a pleasant method, for she never bores us with too many hard facts, and her historical outlook is that of a well-equipped scholar who is conscious that a good deal more than what old-fashioned history books would have given is necessary to explain the ancient world. She talks rather than writes, quotes poetry, and can appeal when necessary to modern instances."

—THE TIMES EDUCATIONAL SUPPLEMENT.

BOOK I.—**THE SHINING EAST.** Cr. 8vo, cloth. 167 pp. Fully illustrated, with Photographs and Maps. Price 2s. net. [ALREADY PUBLISHED.]

"The Shining East" tells in simple language the story of Ancient Egypt, Babylon, Assyria, Media and Persia, Tyre and Sidon, in short of all those ancient peoples first made known to us by our Bible reading.

BOOK III.—**THE ROMAN EMPIRE AND THE BEGINNINGS OF MODERN EUROPE.** [IN PREPARATION.]

**SCHOOL POETRY (Part I) for the Junior Division.**

Crown 8vo., limp cloth, 64 pp. Price 6d. net.

**SCHOOL POETRY (Part II) for the Senior Division.**

Crown 8vo., limp cloth, 144 pp. Price 9d. net.

It is published in two Parts, each containing three Sections so graded as to meet the requirements of three consecutive classes or standards—Part I is designed to serve the Junior Department, and Part II the Senior Department of the School.

**A COMPARATIVE GEOGRAPHY OF THE SIX CONTINENTS.** By ELLIS W. HEATON, B.Sc., F.G.S.

Treated under two main divisions—(a) The Three Northern Continents; (b) The Three Southern Continents. Containing 119 Maps and Diagrams, all new and specially drawn for this work, and 10 full-page Photographic Plates. Crown 8vo. cloth. 219 pp. Price 2s. 6d. net.

Templeton : DE MUSSET'S CROISILLES ;

Kittson : MME. D'AULNOY'S LA BELLE AUX CHEVEUX D'OR.  
(Constable's Organised French Series.)

What will attract the hard-worked teacher in this series is the thorough and systematic working out of the Direct Method exercises in each section. The exercises are always arranged in this order : (1) Questionnaire, (2) Questions on Vocabulary, (3) Questions on word-formation, (4) Questions on Grammar, (5) Dictation, (6) Free Composition.

What we dislike about the books is the continual intrusion of literary usages (such as *Passés Définis* and *Passés Antérieurs*, to say nothing of *Passés du Subjonctifs*) even in the Questionnaires. And the exercises are too hard. They would kill fluency of every sort. One of the present writer's favourite nightmares is being a boy again and having to do a free composition like this : *Narration : Écrivez un conte ou un jeune homme pauvre mais plein de mérite désire épouser la fille d'un homme riche. N'oubliez pas (1) la mise en scène, (2) le développement naturel, (3) le nœud, (4) le dénouement. Éviter les détails inutiles, la sentimentalité, le ridicule, et les bases platiudes.*

Help !

Nesbitt : CONTES POUR LE COMMENCANTS. (Bell and Sons.  
1s. 6d.)

Except that the persistence of the present tense tends to a certain monotony, there is very little fault to find with this book, which develops a most useful general vocabulary in very natural sentences. The stories are not exactly exciting, but they are sufficiently interesting to hold the attention of young beginners.

It will probably take another generation to persuade teachers of the fallacy of the so-called graduating of a text according to the chapters of the grammar-book. Why *should* it be supposed that it is harder to learn a new tense of a verb than to learn a new verb—or a new noun? The fact that *donnerait* is formed more or less by rule from the already known present tense *donne* does not make it *harder* to learn than a new present tense *frappe*, or a new noun *gifle*, which are not formed by any rule to be found in the grammar. The mistake is a heritage from the dead view of grammar as an end, with the text as a means. We feel that in introducing *donnerait* we are teaching the *conditional* too soon. But we are not teaching the *conditional* at all. We are merely teaching the word *donnerait*. Later we shall teach the *conditional* (as a short cut to the knowledge of *more* words of the *donnerait* type ; that is all).

Michelet : LES FRANÇAIS A LA PREMIERE CROISADE ;  
Michelet : VARENNES. (Blackie and Son. 9d. net.)

Two interesting readers, with a historical introduction, sensible notes, and page-by-page vocabularies to each. The subject matter is what well-written history always is—direct, vigorous ; restrained, yet in a sense exciting and even sensational.

Greenfield : AN INTRODUCTION TO CHEMICAL GERMAN. (Harrap.  
6s. net.)

244 pages of reading matter, well selected and interesting, followed by necessary notes and 120 pages of vocabulary.

The present writer, even with his limited knowledge of Science, has always found that he could read German works on Science more easily than those who have studied their German in books specially devoted to Science-German, and is strongly of opinion that those who want a language for a special purpose should study the *ordinary language*. If they do this well, they will soon read with ease in their special subject.

C. F. Mackenzie and P. W. Drew : A PHONETIC READER FOR  
USE IN JUNIOR CLASSES. (Longmans, Green, and Co.  
1s. 3d. net.)

This book is intended for English children. It is a charming work for them. But we will go further, and most urgently recommend it to adult foreigners. Though the matter is partly childish, the language is, with the exception of four short dialectic pieces and two literary specimens for "careful reading," practically pure colloquial English, very rarely spoiled by literary phraseology. It is by far the best linguistic English reader we have seen. The transcription is "narrow," and but for the intrusion of many imaginary aspirates, very true to life.

## Natural History.

THE NATURAL HISTORY OF SOUTH AFRICA : MAMMALS : F. W. Fitzsimons. (Messrs. Longmans, Green, and Co. Price, 9s. each volume.)

The books are in every way excellent ; the author gives accurate descriptions of all the species, and includes many of their habits, or peculiarities. The books make very vivid and interesting reading, and hold the attention, whether of an ardent student or of an interested reader. The illustrations are very well chosen ; and they are remarkable for their clearness, when the difficulties of taking photos of animal life are considered. The chapter on bats is especially noteworthy, all the species being minutely described. The systematic index at the beginning of each volume should prove very useful to the student of zoology, as also will the classification of animals at the end. The volumes are pleasingly bound, the type is large and clear. The volumes will furnish an excellent addition to a school library or prize list.

J. R.

HISTORICAL PORTRAITS, 1700-1850 ; Parts I and II : Lives, by C. R. L. Fletcher ; The Portraits chosen by Emery Walker ; with Introduction by C. F. Bell. (Clarendon Press. 12s. 6d. net per volume.)

The first thing to strike one in these handsome volumes is the surprisingly low price. In these days it is unusual to find over three hundred pages of excellent paper and print, with scores of admirable reproductions of portraits, strongly bound together, and all to be obtained for less than the price of two ordinary novels. The work is full of interest and should be in every school library. Mr. C. R. L. Fletcher brings to his task the skill of a historian, the enthusiasm of a keen patriot, and the experience of a teacher, so that his records of the historical characters portrayed are marked by wise selection, deft arrangement, and terse narrative. The selection of portraits is designed to provide a survey of the great men of the period, and the pictures will make a strong appeal to boys and girls who are studying history.

## General.

THE INDUSTRIAL ART JOURNAL. (Cable Publishing Co. 1s. monthly.)

We have received the third number of this very attractive commercial magazine, which aims at promoting the interests of dealers in fancy goods. Among the contributors we notice the name of Mr. Charles A. Farmer, who writes with good sense on "Art and the Manufacturer." An especially noteworthy feature of the publication is a French translation of all the advertisements and also an account of the exhibition of British manufactures which is now being held in Athens.

NELSON'S CLASSICS. NEW SERIES. (T. Nelson and Son.  
Price 1s. 6d. net.)

1. *The Children of the New Forest* : by Captain Marryat.
2. *John Halifax, Gentleman* : by Mrs. Craik.

These volumes contain old favourites, well bound and printed. They form part of an excellent series which Messrs. Nelson and Son are issuing from their press month by month.

THE BRITISH GIRLS' ANNUAL FOR 1920. (Cassell and Co.  
6s. net.)

This favourite volume, compiled by the Editor of *Little Folks*, contains stories and articles by Angela Brazil, Dorothea Moore, Dorothy Marsh Gerrard, and other well-known writers for children. The frontispiece in colour is drawn by Mr. G. Bottomley and there are other coloured plates as well as line drawings to illustrate the stories. These have been found absorbingly interesting by a little lady whose opinion has been sought, and as a Christmas gift the British Girls' Annual is certain to be welcomed with joy.

### "DISCOVERY."

A new monthly popular Journal of the progress of Knowledge.

A Conference was called last January by the joint invitation of the President of the Royal Society, the President of the British Academy, and others representing both those bodies and a large number of others, interested both in the production and distribution of knowledge, to frame, if possible, a scheme for a journal which should present in popular form the most recent results of research in all the chief subjects of knowledge. This Conference, as was at the time reported in our columns, appointed a Committee to frame a scheme; and their report was presented and adopted at the adjourned meeting of the Conference held on Friday in the rooms of the Royal Society, Burlington House. The Rev. Canon William Temple, D.Litt., presided, and among those present were Sir F. G. Kenyon, Lt.-Col. C. S. Myers, M.D., Dr. Armitage-Smith, Mr. W. G. Rushbrooke, Headmaster of St. Olave's; Miss F. R. Gray, Headmistress of St. Paul's School for Girls; Miss J. P. Madams, of the Co-operative Union; Mr. C. H. K. Marten, of Eton; Mr. A. Vassall, of Harrow; Mr. F. J. Leslie, of the Association of Education Authorities; and Professor R. S. Conway, of Manchester, who has acted throughout as Secretary of the movement. The meeting approved the name "Discovery" for the new journal and established a Trust for its maintenance, the first Trustees being:—

Sir Joseph J. Thomson, O.M., P.R.S.

Sir Frederic G. Kenyon, D.Litt., K.C.B., P.B.A.

Professor A. C. Seward, Sc.D., F.R.S.

Professor R. S. Conway, Litt.D., P.B.A.

The meeting further approved of the agreement made provisionally by the Executive Committee with Mr. John Murray as publisher and of his and the Committee's joint recommendation of Capt. A. S. Russell, M.C., D.Sc., recently of the R.G.A., now of the University, Sheffield, and Reader-elect in Chemistry at Christ Church, Oxford, as Editor. The first number will be issued on January 15th, 1920, at the price of sixpence.

The Conference further considered in detail and adopted the Committee's scheme for the management of the journal, of which the chief principles may be mentioned. The control of the Trustees is final but they undertake to exercise it through a Managing Committee which they will appoint on the nomination

of a large number of bodies, the chief of whom are the Conjoint Board of Scientific Societies, who will nominate five members, the Classical, Historical, English and Geographical, each of whom will nominate one member, and the Modern Language Association, if, as is hoped, that also adheres to the scheme. Further the British Psychological Society and the Royal Society of Economics will appoint one member. All these specialist Associations undertake to supply, year by year, for the Editor's use, a list of contributors capable of representing different sides of their particular branch of knowledge by articles, or series of articles, of a thoroughly popular kind which will, however, always contain references to the books or periodicals in which the subject of the article can be pursued more fully.

This, however, is only one side of the Committee's constitution. It will comprise also representatives of the great Associations which represent different bodies of students and teachers and the Public Libraries. Those that have already pledged themselves to take part are the National Union of Teachers, which is to nominate two representatives; the Co-operative Union, the Associations of Headmasters and Headmistresses, who will appoint one member. Similar co-operation is hoped for from the Royal Society of Literature, the Library Association, the Young Men's Christian Association, the Workers' Educational Association, the Associations of Assistant Masters and Assistant Mistresses, and the Association of Education Committees, all of which have expressed sympathy with the movement.

We understand that the lists of suitable writers and topics for 1920 have already been sent in by the Specialist Associations, and that the preparation for the early numbers are already in train. A prospectus will shortly be issued, but meanwhile orders for copies will be received through any bookseller, news-agent, or from the publisher, Mr. John Murray, 50A, Albemarle St.

It is understood that the journal will at first contain about 24 pages of matter and will undertake in the course of the year to represent in interesting form, though it will make no attempt to describe in full, the progress of knowledge in all its chief branches.

Canon Temple has been appointed by the Trustees to be the first Chairman of the Managing Committee, of which Dr. Armitage Smith is the Treasurer, and Professor R. S. Conway, of Manchester, the Honorary Secretary.

### PITMAN'S POSTAL COURSES

The postal tuition meets exactly the requirements of teachers who are unable to secure oral training, or who desire to pursue the study of commercial subjects at home. One course, or any group of subjects, may be taken at any time, the lessons commencing from any stage of present knowledge. Write for details, stating the subjects in which you are interested.

206, SOUTHAMPTON ROW, LONDON, W.C. 1.

Principal :  
FREDERICK HEELIS,

Director of Studies :  
ROBERT W. HOLLAND,  
O.B.E., M.A., M.Sc., LL.D.

By Special

Appointment.

To their Majesties the King and Queen and H.M. Queen Alexandra,

## WINSOR & NEWTON, Prepared Water Colours

IN  
WHOLE and HALF CAKES, WHOLE, HALF, and  
QUARTER PANS,  
and WHOLE, HALF, and LARGE TUBES.

Quarter Pans of Winsor and Newton's Artists' Water Colours are of the same outside dimensions as the Half Pans. They may, therefore, be used in Winsor and Newton's range of Half Pan Japanned Boxes.

The advantages of habituating the Student at the outset of his career to the use of the BEST materials are so obvious that no attention need be drawn to them.

Messrs. Winsor and Newton's Artists' Water Colours are necessarily more expensive than those usually manufactured for School use, but as, owing to their superior strength, a small quantity yields approximately the same amount of colour surface as the larger pans of Water Colours generally sold for Students' use, the expense in both cases is much the same.

The special attention of Teachers and the public is, therefore, invited to these Quarter Pans of Colour, which, costing practically the same, provide the Student with a superior article.

Full detailed catalogue may be obtained from any of the leading Artists' Colourmen throughout the Country, or from 39, Rathbone Place, London, W. 1.

Established nearly a Century.

THE CAMBRIDGE HISTORY OF BRITISH FOREIGN POLICY,  
1783-1919.

The Cambridge University Press proposes to publish a *History of British Foreign Policy*, from the beginning of Pitt's first Administration (1783) to the Peace of Versailles (1919). It is calculated that the work will fill 3 vols., octavo, of from 500—600 pages each.

It is intended to be a connected narrative and consecutive exposition of the subject, written with strict fidelity to historical truth, but from a national point of view. Military and naval events, and home legislation, will be kept constantly in sight, without being discussed; and the progress of Indian and of (British) Colonial history will not be regarded as detached from that of the United Kingdom. The narrative will throughout be based on documentary evidence, and will, so far as possible, be carried on in chronological sequence, though without any attempt to adhere strictly to order of dates.

The *History* will be divided into six books, each consisting of three (or in one instance two) sections; and will be preceded by an *Introduction*, summarising the history of the British Foreign Policy in the century following on the Revolution of 1688 with some preliminary remarks on the previous forty years. At the end of Vol. III. will be added a brief account, by an expert hand, of the administrative machinery of the British Foreign Office from 1782, at which date an important change was introduced into it.

The narrative and the Introduction will be accompanied by brief notes, chiefly references; and each of the six books will be illustrated by the reproduction of important documents, such as treaties, instructions, despatches, and speeches, or of extracts from them. To each of the books will be appended a succinct Bibliography.

It is proposed that in the narrative should be included brief characterisations of the political principles and achievements of the chief statesmen and diplomatists engaged in the conduct of British Foreign Policy in the several divisions of the period surveyed.

The *terminus a quo* of this *History* (Introduction apart) is chosen as more or less coinciding with the dates of a series of important pacifications concluded by Great Britain, and near in time to the beginning of a new epoch in the political history of the world. The *terminus ad quem* has, it is believed, not been put too late. Any history of the period of British foreign policy extending from about 1907 to the Peace of 1919 must partake of the nature of an epilogue, incomplete in its details; but it is believed that it may be based on a sufficient amount of authenticated evidence for it to prove of lasting use.

The work, which has been planned by Sir A. W. Ward, with the assistance of Mr. G. P. Gooch, will be jointly edited by them, the several sections being contributed by different writers on the general system of the *Cambridge Modern and Mediæval Histories*. It is proposed to confine the list of contributors to British subjects by birth.

This New, 12-Volume Basic Reading Course in

*Applied Psychology is*

**“the best plan for properly training men to increase their EFFICIENCY.”**

Mr. N. A. HAWKINS, Ford Motor Company.

Until now, this means of attaining true efficiency was available only to members of the Society of Applied Psychology, at a cost of twelve guineas. It is offered to you in 12 stiff-bound pocket manuals at the low price of 3½ guineas. The Course trains you in such mind-facts as bear directly on practical affairs, being entirely new in conception and different from all ordinary methods of developing mental power and efficiency. Easily understood and intensely interesting, the Course should be examined by everyone who wishes to achieve success. Send the approval order form to-day to

FUNK & WAGNALLS COMPANY, SALISBURY SQUARE, LONDON, E.C.

**ORDER FORM.** To FUNK & WAGNALLS CO., SALISBURY SQUARE, LONDON, E.C.

Please send ON APPROVAL the first THREE VOLUMES (HANDSOME LIBRARY EDITION) of your NEW READING COURSE in APPLIED PSYCHOLOGY. If I decide to accept your offer, I will remit either £3 13s. 6d. in full payment, or 10s. 6d. first payment, to be followed by nine further monthly payments of 7s. Upon receiving my remittance, you are to forward the additional volumes.

## MODERN LANGUAGES.

### SPANISH.

#### PRIMERAS LECCIONES DE ESPAÑOL.

By C. MARCIAL DORADO. 307 pages. Illustrated. 4s. net.

A first course in Spanish which seeks to simplify and to render as attractive as possible the learning of the language. Every lesson is short and contains only the words in common use; tedious rules have been avoided, but there are brief explanations with sufficient exercises to teach the student the essential points of grammar. The material for oral work, reading, etc., is of great variety, and includes stories and anecdotes from Spanish folklore, rhymes and riddles, songs with their musical accompaniments, and games. The book contains some 30 black and white illustrations, which form excellent bases for conversation, and a complete vocabulary.

"Senorita Dorado's elementary treatise is a sheer delight."  
—*Journal of Education and School World.*

#### CUBA Y LAS COSTUMBRES CUBANAS.

By FRANK C. EWART. 157 pages. Illustrated. (In preparation.)

This reader consists of 14 short sketches describing Cuba, its capital Havana, and the customs of its people. At the end of the book, which is well illustrated from photographs, are questions for conversation, exercises designed primarily for the purpose of illustrating idiomatic expressions, notes explaining geographical and historical allusions, as well as grammatical difficulties encountered in the text, and a complete vocabulary containing not only all the words which are alike in both languages, but all irregular verb forms used, including radical changing verbs, thus making it possible to use the text early in the student's course.

#### ESPAÑA PINTOESCA.

By C. MARCIAL DORADO. 332 pages. Illustrated. 4s. net.

A reading book for the student who has done some preliminary work in Spanish. Its aim is to arouse an interest in Spain, its people, and its customs, and in this way to provide a background for the study of the language. In addition to vivid descriptions of some representative towns and of their social life, legends, songs with their musical accompaniments, poems, folklore stories, selections from well-known Castilian writers, and a short play have been included, and the result of this medley is a book which breathes the atmosphere of Spain. At the end of the book are a questionnaire on each extract, exercises for translation into Spanish based on the text, notes, and a complete vocabulary.

"An attractive class book."—*Scottish Educational Journal.*

#### A FIRST READER IN SPANISH.

By RUDOLPH SCHEVILL. 181 pages. Illustrated. 3s. net.

The selections given in this book are varied, interesting, carefully arranged, and graduated in order of difficulty. Part I contains short legends and fables, a few simple poems, and a number of familiar Spanish proverbs. Part II consists mainly of dialogues designed to acquaint the student with everyday expressions and idioms. Part III consists of extracts from Spanish novels and histories.

"... A book which can be used by students with great interest and profit, and those who have mastered it will have at their command a large vocabulary, sufficient for most purposes."—*Scottish Educational Journal.*

### ITALIAN.

#### AN ITALIAN GRAMMAR.

By R. S. PHELPS. 328 pages. 5s. 6d. net.

A book which serves the double purpose of a lesson book for beginners and a grammar for reference purposes in more advanced work. The first twenty-seven lessons equip the student to read easy Italian narrative. The early part of the book is particularly easy, the difficult subjects being broken up and studied in sections, but before the book is finished all the essentials have been treated thoroughly.

#### DUE COMMEDIE MODERNE:

O Bere O Affogare. By LEO DI CASTELNOVO.

Lumie di Sicilia. By LUIGI PIRANDELLO.

Edited with Notes and Vocabulary by EMILIO GOGGIO. 130 pages. 2s. 3d. net.

These two comedies of present-day Italy contain many of the simple colloquial expressions necessary for any real acquaintance with the language. The editorial matter consists of brief biographical sketches of the two authors, notes, and a vocabulary.

### FRENCH.

#### LE FRANÇAIS POUR TOUS

par la méthode directe. By NOELIA DUBRULE. 12mo. Cloth. Illustrated. 264 pages. 4s. net.

An introductory course in French, the object of which is to help the pupil to speak fluently, clearly, and distinctly, to give him the ability to read small news items in French newspapers, to write simple French letters, and to acquaint him with the fundamentals of French grammar. The exercises for oral work are numerous, varied, and interesting; as an aid to the acquirement of a vocabulary there are many interesting *jeux de mémoire*; and *chansons* with their accompaniments form an integral part of the book.

"One of the best books on the direct method we have seen."—*Highway.*

#### DE L'UNIVERSALITÉ DE LA LANGUE

FRANÇAISE. By ANTOINE RIVAROL. Edited by W. W. COMFORT. vi. + 62 pages. (In preparation.)

This reprint of the successful thesis submitted in competition for the prize offered by the Berlin Academy in 1783 in answer to the questions, "What has made French a Universal Tongue?" "Why does it deserve this Fame?" "May it be expected to preserve it?" forms a logical introduction to the study of French literature. The text is distinguished by that clarity of style and small vocabulary of general words which marked the best writings of the 18th Century, and is well adapted for study in the upper forms of Secondary Schools as well as by students of University standing.

A Complete List of Modern Language Texts will be forwarded post free on application.

**GINN & COMPANY, 9, St. Martin's Street, Leicester Square, London, W.C. 2.**

### THE TEACHERS REGISTRATION COUNCIL.

Representative of the Teaching Profession.  
Constituted by Order in Council  
29th Feb., 1912.

The Council maintains an Official Register of Teachers who have been accepted for admission under the Conditions of Registration.

The Register is open to qualified teachers in every branch, and until the end of 1920 experience under approved conditions is the sole qualification required. After that date the conditions will become more stringent.

Particulars and Forms of Application may be obtained from

THE SECRETARY,  
Teachers Registration Council,  
47, Bedford Square,  
London, W.C. 1.

### THE COLLEGE OF PRECEPTORS.

Incorporated by Royal Charter.

BLOOMSBURY SQUARE, LONDON, W.C. 1.

### NATIONAL SERVICE RECORD.

A record is being prepared of services rendered in connection with the war by Members of the College and Holders of the College Diplomas. For this purpose the Secretary will be glad to receive information with regard to such services, whether rendered in the fighting forces or in the auxiliary forces—e.g., Red Cross organizations, Special Police, Women's War organizations, or in other ways. He will also be glad to receive from Members and Diploma Holders any proposals which their experience may have suggested for improvements in methods or organization, especially in relation to education and its use as a training for National Service.

### THE INCORPORATED SOCIETY OF MUSICIANS.

Founded 1882. Incorporated 1892.

#### OBJECTS OF THE SOCIETY.

The objects for which the Society is established are the promotion of whatever may tend to the elevation of the status, and the improvement of the qualifications, of all Members of the Musical Profession, or may aid the musical education of the people.

#### ADVANTAGE OF MEMBERSHIP.

A Benevolent Fund for Members, the Regulations for which have purposely been made as wide as possible in order to meet the many and very varying contingencies which arise from time to time.

An Orphan Fund for the children of musicians, which is open to the dependents of all musicians, whether their parents were members of the Society or not.

Legal advice on all professional matters; Income Tax Claims; Copyright; The Recovery of Fees, &c.

Registers open to members of "Vacant Appointments" and "Engagements," and for the transfer from member to member of pupils moving to new districts.

#### LOCAL EXAMINATIONS IN MUSIC.

The examinations of the Society, established in 1884, are carefully arranged in a systematic series of Progressive Grades, embracing a complete course of musical study, and constitute a most valuable guide for Teachers in recording the progress of their pupil.

Full particulars may be obtained upon application to the GENERAL SECRETARY, 19, BERNERS STREET, W. 1

# SCHOLASTIC APPOINTMENTS

University Men and Women seeking scholastic appointments should apply to

## **Truman & Knightley** SCHOLASTIC AGENTS LTD

who introduce ASSISTANT MASTERS AND MISTRESSES to the majority of the leading Public and Private Schools at home and abroad.

*Through this Agency, well educated gentlemen with Higher Local and other good Certificates, interested in children and in teaching, can find congenial work in good high-class Private Schools, where the hours are not excessive, conditions pleasant, and the holidays are long. Salaries range from £50 to £100 or more per annum, with board and residence, according to age, qualifications, and experience. There are also many vacancies for Student and Junior Mistresses at salaries of from £30 to £50 per annum with board and residence.*

There is a separate department for  
**LADY MATRONS and HOUSEKEEPERS**  
for Schools.

No charge for registration. . . :: Moderate commission.

### SCHOOLS TRANSFER DEPARTMENT.

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

Offices: **158-162 OXFORD ST., LONDON, W. 1**

Telegrams: "TUTORESS, PHONE, LONDON."

Telephone: MUSEUM 1136.

*It needs no shake*

**See Why?**

The nib, rising from the ink barrel is always wet. No dried matter encrusts and clogs it.

*Not a splutter in a penful*

**IT'S ALL-BRITISH.**

*It needs no filler*

**See Why?**

Its extra large ink barrel presents a mechanism-free opening into which ink can be poured easily from a bottle

*Not a spill in a fill*

**You have probably tried many Pens which have tried you. Why not end your trials and buy a "Whytwarth"?**

*"The pen with the disappearing nib" has none of the drawbacks that make you suspicious of ordinary fountain pens. Science and brain have in it produced the perfect writing instrument. The ink cannot leak or evaporate, it is locked in the pen. The nib is always wet and ready to write. The ink-barrel is easy to the hand, holds a lot of ink, and can be filled easily without a filler.*

## Great New Work

### THE

# OUTLINE *of* HISTORY

THE WHOLE STORY  
OF LIFE AND MANKIND

**CLEAR—COMPACT—FULL AND COMPLETE**

A brilliantly-written and inspiring view of the whole History of Life. A great and valuable Educational undertaking. Written by a writer who is also an experienced and skilful teacher, assisted by a group of our greatest living historians and scientific writers.

IT IS an exact, luminous, and concentrated Encyclopædia of the Past, with hundreds of Maps, Charts, and Illustrations of the most helpful and illuminating nature.  
IT IS not a mere essay, but a clear and complete summary of the latest knowledge.  
IT IS the whole History of Life and Mankind fused into one epical narrative.

**IT IS THE FIRST BOOK OF ITS KIND**

**THE OUTLINE OF HISTORY** is an attempt to tell, truly and clearly, in one continuous narrative, the whole story of Life and Mankind, so far as it is known to-day. This universal history is at once something more and something less than the aggregate of the National histories to which we are accustomed. It has been written primarily to show that **history as one whole** is amenable to a more broad and comprehensive handling than is a history of special nations and periods.

Mr. Wells begins with the oldest of all human problems—the Origin of the World, the early Beginnings of Life, and the Ancestry of Man. Of all this it is now possible to tell a plain story. He proceeds to "outline" the history of mankind—the Rise and Fall of the Early Empires—the Rise of Christianity—the American Revolution—the French Revolution—the Adventure of Napoleon—the Story of the Great Powers down to the German Disaster.

**EXPERTS COLLABORATE**

*Mr. Wells has had the assistance of various expert authorities, such as Sir E. Ray Lankester, Sir Harry Johnston, Professor Gilbert Murray, Mr. Ernest Barker, and others, for the purpose of obtaining accuracy in every detail.*

**600 Illustrations, Maps, Charts and Drawings**  
With Many Beautiful Plates Printed in Full Colours

To be published in about 20 Fortnightly Parts at 1/2 each

With SPECIAL ART SUPPLEMENT by Fred Richards, A.R.C.A.,  
"The High," Oxford, and Verse by the Artist.

## NOTICE TO READERS.

The January Number of the Educational Times will contain an important article by Mons. Emile Boutroux, Member of the French Academy, on "Questions of the Future," and the first part of an essay by Mr. J. H. Simpson, author of "An Adventure in Education," who deals with "The Failure of our Class Teaching." There will be, in addition to the usual survey of the month, a special supplement of convenient size containing

### THE E.T. LIST OF ASSOCIATIONS.

This list will furnish particulars of all educational associations, societies, and organisations, and will form an indispensable book of reference.

Beginning with the issue of January, 1920, the price of the Educational Times will be Ninepence net, Elevenpence post free. Subscription for one year, Ten Shillings, post free. For Order Form and Business Notice see page 438.

## NOTICE TO WRITERS.

The Editor is prepared to consider essays, sketches, or verse, provided that they are marked by originality or freshness of view. Accounts of successful teaching devices or efforts to introduce new methods in education will receive special attention. Articles submitted should not exceed 600, 1,200, or 1,800 words in length, according to the importance of the topic. The name and address of the writer should be written at the head of the first page and the number of words indicated. Articles, if declined, will not be returned unless they are sent with a stamped addressed envelope for this purpose.

Address: 31, Museum Street, London, W.C. 1.

## NOTES AND COMMENTS.

### Belated Grants.

Under the promise of grants in aid the authorities induced many ex-soldiers to enter upon a course of training with a view to becoming teachers. The students are, in many cases, married men with families. They joined colleges or universities at the beginning of the present term, and have been in attendance for seven weeks or more. During this period they received none of the promised grant, and at the time when this note is being written there are a large number who are living on money lent to them by sympathetic tutors or subscribed by their more opulent fellow-students. Such a state of things is intolerable and calls not only for prompt remedy but for the equally prompt punishment of those responsible. A fitting penalty would be to keep back their salaries for two months and leave them to meet their domestic claims on borrowed money. In the public interest a better method would be to dismiss them from the service, since their want of imagination and their readiness to sacrifice everything save their own convenience make them a public nuisance. If the Board cannot get its already approved work done promptly by the Treasury, then the Board should pillory the Treasury. The grants in question were promised, and there can be no valid reason why they should not have been paid at the beginning of the term. As things are, the students have been harassed to an extent which has hampered the work for which the grants are presumably to be paid.

### President Poincaré at Glasgow University.

Our Scottish correspondent writes:—President Poincaré visited Glasgow on 13th November, and delivered his Rectorial address to the students of the University. Previous to this he had received the honorary degree of Doctor of Laws, and on his entry into the St. Andrew's Hall he received a great ovation from the enthusiastic gathering. His speech, dealing principally with the ancient alliance between France and Scotland, was in English, and there was no warrant for his modest plea for indulgence. The admirably balanced periods, with a scholarly reticence of rhetoric, flowed with confident ease. The pronunciation was clear, and the accent almost impeccable, and his oratorical manner may be described as imperturbable. After dealing with the "Auld Alliance," he came to more recent times, and spoke of the closer and sterner intimacy in the recent war. He pictured recent battles, and paid tribute, in tones in which the note of genuine emotion might be detected, to the valour of Scottish regiments. The national note was maintained to the end. The students gave him a most respectful hearing, and President Poincaré has since expressed his gratitude for the reception accorded him.

### The Universities Commission.

It is announced that the King has approved the appointment of a Royal Commission to consider the applications which have been made by the Universities of Oxford and Cambridge for financial help from the State, and for this purpose to enquire into the financial resources of the Universities named and of the Colleges and Halls therein, into the administration and application of those resources, into the government of the Universities, and into the relation of the Colleges and Halls to the Universities and to each other, and to make recommendations. The Chairman of the Commission is Mr. H. H. Asquith, who will preside also over the meetings of the Oxford Committee; Mr. Gerald W. Balfour presiding over those of the Cambridge Committee, while a special Estates Committee will have for its chairman Lord Ernle. The interests of women students will lie in the hands of Miss Penrose, of Oxford, and Miss Clough, of Cambridge, while Mr. Albert Mansbridge will represent the Workers' Educational Association. It will be agreed that the selection of Mr. Asquith as chairman is a happy one. Under his guidance there is little fear that the true spirit of the ancient universities will be disregarded or placed at the sole mercy of a Government department. The appointment of the Commission has been preceded by a State grant of £15,000 to each University. It is on many grounds to be regretted that the Universities have found themselves unable to adjust their own affairs, reforming their constitutions and adopting a plan of pooling the resources of individual colleges.

### Adult Education.

Closely connected with the work of the Universities Commission is the Report of the Committee on Adult Education, a body established during the war, with the Master of Balliol as chairman. Interim reports have already appeared, and the final one, like its predecessors, is conceived and written in a spirit of the broadest humanity. Mr. A. L. Smith and his colleagues have raised the whole theme of adult education to a plane far above that of the old-time "aids to self-improvement" or the more recent technical training. They suggest that each University should have an extra-mural department of adult education, with an academic head, and that careful consideration should be given to the question of providing residential tutors in those districts wherein a substantial amount of extra-mural work is carried on, and also to the further possibility of establishing local colleges. It is urged that a larger and more adequately paid staff of tutors and lecturers should be specially employed in this work and that the salary of a full-time tutor should not be less than £500 a year. It is suggested also that each Local Education Authority should be required to submit a scheme for the provision of non-vocational adult education. These proposals involve a new view of the functions of a University. Instead of remaining within their own walls the teachers are to become peripatetics in a new sense. It is important that all should share in this work. It will be disastrous if Universities are separated into two parts, one intra-mural, the other extra-mural, each with its own staff. The tutors must exchange places fairly often. To be obliged to give lectures to working men is an excellent discipline for the University don who has lived long in the atmosphere of his own lecture room or laboratory.

### The Commission's Task.

The terms of reference suggest that the immediate duty of the Commission will be that of investigating the financial resources of the Universities. It will be unfortunate if the outcome is the placing of Oxford and Cambridge on the Board's list of Recognised Universities with a system of permanent departmental control. On such terms the largest grant imaginable would be dearly bought. The Commission will have an opportunity of suggesting ways in which State aid may be given without any corollary of State interference. It will be able to affirm the principle that grants may be given to Universities and Schools on trust that they will return full value without any setting up of a system of detailed supervision by officials. To secure this it will be necessary to ensure that the machinery for fulfilling the trust is in good order, and that it may be modified to meet changed circumstances. Thus the government of the internal affairs of a University by an outside constituency of graduates must be replaced by something more appropriate to our own times. It must be possible for the teachers to alter the curriculum, even if the neighbouring clergy do not approve. The University must be able to extend its teaching to meet the growing demands of those who are not able to reside within its "radius." It must shake off any monkish prejudice against women graduates and must be ready to admit modern subjects to its curriculum while resolutely declining to convert itself into a trades school. The problem before the Commission is to discover how Oxford and Cambridge can best be reformed without ceasing to be Oxford and Cambridge.

### Child Employment.

It is announced that the Board of Education have fixed the appointed day for putting into operation the section of the Act relating to child employment. After the end of next March we shall see the gradual disappearance of half-time labour as existing "half-timers" reach the age of fourteen. From the appointed day no child between 12 and 14 may be employed for wages for more than two hours during a school day. We shall thus be free from the worst reproach to our civilisation, one which has attached especially to our textile factories ever since they were started. Our progress has been slow, but it must be recognised that we have travelled far from the days when pauper children were sold from London workhouses and sent to the North of England to work in the factories, often for fourteen hours a day. At every stage in the advance from that utter barbarism there have been prophecies of woe from the manufacturers. When children under nine were excluded from the mills we were assured that the cotton trade would be ruined. It survived and flourished, but the gloomy forebodings were repeated when children under twelve were excluded. Again the prophets were discredited, but they wailed piteously when the Education Act was being passed. The cotton trade was never more prosperous than it is to-day, and we may expect that it will flourish more than ever when children under fourteen are excluded from the mills. It is interesting to note that Japan is preparing to adopt a similar measure, and in America it may be anticipated that the States which have hitherto resisted the attempt of Congress to abolish child labour will presently fall into line.

**Mr. Fred Richards.**

With this issue of THE EDUCATIONAL TIMES we are asking our readers to accept a supplement containing a reproduction of a drawing by Mr. Fred Richards with some sprightly verses from his pen. Mr. Richards has generously allowed his drawing to be reproduced for this purpose, thereby showing his interest in all that concerns education. He is already closely associated with schools, and serves as Art Inspector under the Central Welsh Board, and as an Examiner for the University of London. He was trained at the Royal College of Art, where he gained the full Diploma and the School Diploma in Design. He is also an Associate of the Royal Society of Painter Etchers, and for some time served as Acting Secretary under the President, Sir Frank Short, R.A. His drawings of Oxford, Venice, Florence, Rome, and Windsor have been published in a series by Messrs. A. and C. Black, and are well known to artists. Mr. Richards was invited by the Central Welsh Board to visit the Secondary Schools in Wales during 1917 and to prepare a report on the teaching of art. This document was published at the end of last year, and is noteworthy for many excellent suggestions, not only on art teaching but also on school equipment and decoration. He holds that art should form an essential part of education and of the life of the community, instead of being treated as an accomplishment or "extra." Recently Mr. Richards has taken to writing verse, and several examples have appeared in our columns. Our readers will find in the Supplement material for judging his ability, both as artist and as poet.

**Concerning Ourselves.**

With this issue of THE EDUCATIONAL TIMES we bring to a close the first volume of the new series which started in January last. Since that time the circulation of the paper has advanced steadily, and we have received many letters expressing approval of its policy and appreciation of its contents. These are the more gratifying because it is sought to keep the journal independent in its tone and to treat education with a freshness of view not too common in educational publications. THE EDUCATIONAL TIMES is not "conducted for private profit," although it is a "private adventure," wholly independent of all associations or organisations and not controlled by any firm of publishers. A survey of our advertisements will show that we do not sell our columns or our educational conscience to the proprietors of secret devices or systems. We are probably the only educational journal which refuses to advertise certain notorious schemes for enabling men in business to obtain enormous salaries and rapid promotion. We desire a "good" circulation rather than a large one. We would rather have five thousand readers than ten or twenty times that number of purchasers who merely glanced over our columns. Our readers can help us by making THE EDUCATIONAL TIMES known to their friends and colleagues, and we hope that before long the journal will be found in every library and staff common-room. Beginning with the January issue there will be several new features and a greater number of pages in each issue. In view of future developments certain business arrangements have been revised. Particulars will be found on page 438 of this issue.

**MONTESSORI AND MUSIC.**

BY PERCY A. SCHOLES.

I HAVE just been the victim of a little domestic misunderstanding. I sat down to play a short selection on the piano, whereupon the various inmates of my house flocked into the room in various states of surprise, and the general feeling of the company was expressed by one of the younger members, who (with that lack of respect which we have, alas, come to regard as typical of modern youth) enquired—*whether I was going dotty?*

My assertion that there was Montessori method in my madness, "Advanced Method" even, does not seem to restore my reputation, and for a little time I must be content to rest under a cloud.

The fact is Dr. Montessori is not exactly a musician, and her collection of piano pieces, as used in her headquarters school at Rome and published in her "Advanced Method," must have given a shock to any devoted admirers who happen to be the possessors of a little instinctive or acquired musical taste. "These few movements repeated over and over again and played with all possible accuracy will surely, sooner or later, be felt in every rhythm by the children," says Dr. Montessori (p. 342). Heaven forbid! May they never be played—much less "repeated over and over again"—in any British school. We in this country can learn much from Dr. Montessori—but not in music. The general Montessori principles may help us (as those of Froebel or Caldwell Cook may also help us). But we shall have to work out our own musical application of them.

What I have said is a reflection on Dr. Montessori's musical taste, nothing worse! But I fear that there is also something fundamentally wrong about her whole educational treatment of the subject—at all events on the side of pitch-relation, or "tune," as distinct from time relation and rhythm.

I think there have probably been two main reasons for Montessori's deviation from sound educational lines in her treatment of music. Firstly, she came to the subject rather late in her career as a reformer; she had been dealing with branches of education in which the use of material things is valuable, things with size and colour and number—blocks and buttons, and so forth. And so, when she came to music her mind was running on the block and button rail, and expressed itself in bells—little bells that the children could handle and arrange in order, and other apparatus of even a less desirable kind. Secondly, not being herself a musician, she put herself a good deal in the hands of Miss Maccheroni, who had had the most unfortunate training possible for anyone who is going to reform the treatment of music in education—that of a pianist.

Now consider for a moment how the pianist approaches music. In nine cases out of ten (even in these days of Matthey and Mrs. Curwen and Stewart Macpherson) the piano pupil learns from his very first lesson to look upon music as a matter of black and white keys on the instrument and of fingers and notation. And these things are not music at all, but merely the means of evoking it.

Thus we find Miss Maccheroni (piano-trained, and hence material-minded) and Dr. Montessori spending a great deal of time in training the child, or leading him to train himself, in what is *not music at all*, but mere notation, names of notes, order of black and white keys, and so forth. All this can be done by apparatus, and as apparatus is apparently very much in Dr. Montessori's mind the wrong track on which Miss Maccheroni has set her a-going is one on which she can run with perfect happiness. Can we not induce Dr. Montessori to believe that the essential musical apparatus is that which she studied during her medical training. Ear and voice are the natural media for the child's musical training—staves, crotchets and quavers and the like coming a very long way behind. "The thing first and then the sign" repeated John Curwen constantly: Dr. Montessori may say she follows this plan—but the sign bulks far too largely in her mind, and her dodges of placing discs (to represent notes) on a green board with lines in bas-relief (to represent the staves) have very little musical or educational value. They may interest the children, but I would rather see them interested in *music*.

This is where many newly-invented "systems" and "methods" of music-teaching go wrong. They assume that notation has a value in itself (which it hasn't) and that it is a difficulty to the child (which it isn't). The real difficulty is to train the ear of the child to recognise notes and its voice to reproduce them. The rest is easy. A mere glance through the sixty pages devoted to music in the "Advanced Method" will show how terribly wrong its author is in this matter.

There is, however, one encouraging sign, which should not be overlooked. The Montessori treatment of rhythm is infinitely better than the treatment of pitch. Here *things* (musical things, that is) get their due attention, and *signs* fall well into the background. The reason seems plain—the influence of Dalcroze has reached Rome. His name is mentioned, and though it seems likely that Miss Maccheroni's own experiments were already leading her in the direction of the interpretation of rhythm in bodily movement by the children, the study of the Dalcroze system has surely had a good deal to do with the general soundness of the plans ultimately adopted. I should like to see those Roman children at their rhythmic exercises. They must enjoy them, I feel sure.

Dr. Montessori has experimented with "sense objects" for the teaching of rhythm (or rather of time notation). She had these manufactured, and abandoned them "because we found they were simply in the way." A little more experience and she will find, similarly, that "sense objects" for the realisation of pitch relationship are also "in the way." The one sense to which her great appeal should be made is obviously the sense of hearing, and all this appeal to eye and touch is, to say the least, greatly overdone. In rhythm teaching Dr. Montessori's plan is to lead the children "to recognise rhythm by the ear through listening to music—not by the eye whilst the teacher explains." Let her apply this general principle all round and she will not be far wrong.

Coming now to a few details, I should like (impertinent as it may appear) to suggest to Dr. Montessori that anything she writes on music should be revised by a practical musician before it appears in print, and the same warning applies to her translators. In the English (*i.e.*, American) edition of her "Advanced Method" I find such glaring errors as the use of the word "tone" for all those notes which can be here conveniently referred to as the white notes of the piano, and the use of semitone for all those which we can, in a similar handy way, call black notes. Now, to begin with, no note can be either a "tone" or a "semi-tone"—these words signify an *interval between two notes*. Moreover, "as every schoolboy knows," there are semitones as well as tones amongst those white notes. I think Dr. Montessori imagines the diatonic scale to be entirely constructed of white notes. The error of statement or translation is childish, but it may mislead some un-musical readers as to actual musical fact. Then we have the word "tie" used where "slur" is clearly meant. Further we have the treble clef almost invariably placed on the wrong line of the staff: six exercises running on p. 349 have this, and if acted upon the little error of notation would have the effect of transposing each passage three notes lower than intended.

A much bigger point, and one which I would fain dwell on, did space allow, is the use throughout of the fixed-doh system. School music teaching in this country is far in advance of that in perhaps any other country in that sight-reading for tune is based upon relative, and not absolute, pitch. Old John Curwen did this for us, and if by some side wind from Rome or Geneva the moveable-doh is blown out we shall have much to regret.

And now, to return to that collection of music as used in the headquarters school at Rome and recommended, by implication, for use elsewhere. It is of the kind which used to be found in the "piano-tutors" in the days of our parents: I mean there is a thread of sentimental and vulgar tune in the right hand, floating on a semi-stagnant repeated-chord or arpeggio bass in the left. The bass note is always the tonic or dominant, with an occasional hop to the sub-dominant; sometimes the harmony remains unchanged for three or four bars. The whole arrangement is, therefore, in the cheapest style. As for the tunes, they are the merest jingles—"One Kiss More" ("Ancora un Bacio"), the "Eagle March" by a very unworthy bearer of the name of Wagner, a "Pas de Patineurs," a little ditty almost undecipherable through faulty notation but entitled "Dear Little Children"—and the like. No wonder my household jeered!

Is it too much to suggest that before she leaves England Dr. Montessori should make an effort to meet some of our leaders in musical education? I make the suggestion quite respectfully, and would propose to her a series of heart-to-heart talks with (say) Dr. Somervell, Mr. Geoffrey Shaw, Dr. Borland, Mrs. Curwen, and Mr. Stewart Macpherson.

Our general level of musical education may not be all we desire, but it is in advance of what is common abroad, and I really believe that our five or six "leaders" in school music activities are in advance of the world.

[Our readers should see also Letters to the Editor.]

## THE TRAINING COLLEGE.

A CRITICISM BY A TEACHER.

THE class is suffering in the throes of inexpressible boredom. The lecture is on Shakespeare, and, Heavens! how that woman can talk! For the lecturer is a lady, be it understood. Never surely was such a talker heard in the land. The lecture must last for fifty minutes, neither more nor less, and the class endures stoically. At last it is over, and the students file out with dim impressions of Goneril and Lear mixed up inextricably in their minds. This section of the students is composed mainly of out-of-date "crocks" who have been in the teaching service for years, but whose ideas and methods have become so hopelessly obsolete that they have been driven into the training college under the threat of dismissal. They did not want to enter college; but they had no choice in the matter. One year is the period of their training, and in that time they are expected to imbibe culture sufficient to bring them abreast of the times. After the lecture the students swarm into the common room to prepare for the next lecture, which happens to be on psychology. As it happens, some of the students are in anything but a psychological mood this bright spring morning. Only about a dozen present themselves for the lecture, and the lecturer, after waiting a minute or so, sends the college caretaker to summon the laggards from the common room. That stronghold has already been put into a state of siege by barring and bolting the windows and doors; and the attacking force, in the person of the caretaker, is repulsed by means of sundry small pieces of chalk, cigarette ends, etc., accompanied by unflattering remarks on the size of his feet (he is an ex-policeman). He retreats with more haste than dignity, and makes his report to the lecturer, who, recognising the futility of further negotiation, declares psychology "off" for that day, and retires to heal his wounded dignity as best he may.

The incidents narrated above, like those which follow, may be taken as being absolutely true, and not coloured or exaggerated in any particular. The writer has simply chosen the routine work of one day at the training college, and it may be taken as fairly typical of all the rest in this particular institution.

The next lecture is on logic, and though the lecturer is extremely well versed in his subject, he is hampered by a halting delivery which does not help much in the keeping up of interest. In this instance, the students deign to honour the function with their presence, and take their seats in good time. They beguile the period of waiting with various popular songs of the day, roared out with the full power of their lusty lungs. The shouted chorus swells into a shattering fortissimo as the lecturer enters. He is used to this, however, and merely glances around with a somewhat sheepish smile as he waits for order. At last the lecture commences, and proceeds with sundry irrelevant interruptions, along its appointed course. At a certain point in his discourse the lecturer turns to the blackboard to illustrate some point or other. A "wag" in the third or fourth row has been waiting for this very moment. A small piece of chalk, hurled with great force and accuracy, strikes the man of logic fairly on the back of the head. This clever feat is, of course, greeted with tremendous applause mingled with enquiries of the successful marksman as to whether he prefers a cocoa-

nut or a cigar. The lecturer turns round instantly and demands the name of the culprit, which, of course, is not forthcoming. The lecturer proceeds with his discourse, but refrains from making any further notes on the blackboard.

Instances of this kind might be multiplied. The writer remembers one occasion when the botanical lecturer, having invited his class to bring specimens for study, was rewarded by seeing about ten of his students staggering into the lecture-room, bearing between them the trunk of a tree; and another occasion when, the patience of a certain lecturer having become exhausted, he invited "the best man in the class" to settle the matter at variance "à la Tom Cribb." The age of chivalry was apparently dead, for the "best man," whoever he was, did not pick up the gauntlet.

It must not be inferred from the above incidents that the general tone of our training colleges is rough and rowdy; but certain it is that there is far too little respect shown for education and its ministers. The reason for this is fairly obvious. No one in Britain, outside the purely educational circles, cares a straw for education. Teachers are undervalued and underpaid; and over the whole business there is an air of unreality and what might be called play-acting. Our training colleges are on the right lines, but they are not progressing in any way. The student realises vaguely that logic, psychology, and the other sciences which the colleges attempt to teach, *have* a certain bearing on educational problems; but the short time spent in college is absurdly inadequate to touch more than the outer fringe of a vast subject which might well occupy the efforts of a lifetime. The consequence is that the student, in most cases, leaves college with a large and healthy contempt for the great sciences of which he has imbibed so pitiful a smattering. The chief function of our training colleges is to teach the most efficient methods of imparting knowledge, and yet this is where their failure is most complete. There are, or ought to be, two separate and distinct aspects of a teacher's training; one, the purely cultural aspect, that is, the intensification and development of the teacher's knowledge; the other, the implanting in the teacher of the power to impart that knowledge to others. The former side of the teacher's training is developed in our training colleges to the almost total exclusion of the latter. The only way to become perfect at anything is to keep on doing that thing over and over again. An ounce of practice is worth a ton of theory. This trite saying ought to be engraved conspicuously on every wall of every room of our training colleges, for it is in this that their failure is most manifest. Our training colleges fail utterly to reproduce the actual conditions of the teacher's daily life. Our budding pedagogues receive absolutely false impressions with regard to children. They are trained to look upon the child as a sort of human machine with various logical, ethical, and psychological parts which will respond to the touch of a skilled operator, as a piece of machinery obeys the touch of a skilled engineer. Their teaching experiences at college are confined to experimenting with—at the most—sixteen or eighteen of the best children from the practising school; children who correspond exactly with the Herbartian theory of that mysterious creature—the "child." Under these ideal conditions teaching is, of course, a sheer delight and a

fine art in which the teacher's gifts have full play. Under actual teaching conditions, however, culture has to give way, to a great extent, to disciplinary power. The teacher who has great disciplinary power and little culture will be immeasurably more successful than the cultured teacher without discipline.

One shudders to think of the yearly loss to the teaching profession of cultured men and women. And what a painful awakening awaits our young fresh-souled enthusiast from the training college! Placed before a herd of children fifty or sixty strong, each one a natural child and not the ideal creature of the Herbartian philosophy! What wonder is it that after a few weeks or months, during which they see their training college illusions slipping away from them one by one, they finally throw up the whole thing in disgust? The writer remembers the case of a teacher who had gone through college, and was, moreover, a graduate of a well-known university. His scholastic attainments were unimpeachable, but his teaching powers were woeful. He could not be trusted alone with a class, and after exactly one week he resigned his position in despair. This is, of course, an exceptional case, but it shows the direction to which our modern training tends. We never seem to be able to strike that happy medium which is the first necessity in all things. The old pupil-teacher system had its faults, and its worst one was the subordination of culture to teaching power. Nowadays we have gone to the opposite extreme, and matters will not improve until our training college mandarins adopt the best features of the two systems.

#### Mr. Frederick Andrews, of Ackworth.

Forty-two years as the headmaster of one school is a record of which to be proud. It belongs to Mr. Frederick Andrews, who has held this position at Ackworth School, Yorkshire, since 1877. The school is a famous one for boys and girls of the Society of Friends, and was founded in 1779 by Dr. Fothergill, a famous Quaker physician, who during a tour through Yorkshire purchased the land and building which he found had been abandoned by the Foundling Hospital authorities who had intended it for use as a country branch of their London institution.

During Mr. Andrews' time at Ackworth an Assembly Hall, excellent Science and Domestic Laboratories, Gymnasium, and Art School have been added to the equipment of the school, and the school itself has been recognised by the Board of Education as "an efficient Secondary School," though, like all the schools of the Society of Friends, it does not accept Government Grants. Throughout this period, too, Mr. Andrews has been a foremost figure among those who have worked for the cause of Education in the Society of Friends.

His activities have not been, however, confined to these educational spheres, for he has been a great cricketer in his time and the school was long famous for its teams. He has also been for some time Clerk to the Meeting for Sufferings, the Friends' Executive Committee.

The school accommodates some three hundred boys and girls, and among Mr. Andrews' past scholars have been Mr. E. V. Lucas, and "John o' London" (Mr. Wilfred Whitten). Next year, so it is just announced, Mr. Andrews is to be succeeded by Mr. Gerald K. Hibbert, who has since its foundation in 1909 been Principal of the Swarthmore non-residential Working Men's Settlement, Leeds, which has been eminently successful. Educationists will, therefore, doubtless watch with interest the adaptation of methods that have proved so eminently successful in adult education to the needs of his younger charges. H. W. PEET.

## PAT.

BY HETTY MIDDLETON.

PAT was the product of a union of Spain and England—and incidentally of a London slum. He was small for his eight years but sturdy. His face would set an artist afire with longing to paint. The clear olive skin of the South formed a perfect setting for his "real Irish" blue-grey eyes. He was crowned with a tangled mop of black hair, which, in his moments of anger (which were frequent), he would toss back with a gesture which surely came down to him from some toreador ancestor.

Pat's father was serving with the Portuguese forces in France, whilst his mother—a great good-natured figure of a woman—was absorbed with a passion for drinking which left her but little time or energy for the supervision of Pat. The result was that Pat was left largely to his own resources and developed a self-made code of morals based entirely on the proximity of the nearest "bobby" at any given moment. He stole, he lied, his language would have done credit to a "sergeant of the line"—yet he had the makings of a man in him. He had qualities which made him loveable and interesting to "Teacher."

This last fact Pat soon discovered, and a camaraderie between "Teacher" and pupil was established. To "Teacher" Pat was always perfectly frank, though others often found him in lies. His confidences were, as may be imagined, often extremely embarrassing to "Teacher," who was made "accessory after the fact" to many petty misdemeanours.

When "Teacher" first appeared at school, Pat was a notorious truant. His mother had been fined many times on this account; but, as she explained to "Teacher," "Shure, he saves me other ways, for if it's at school he is ivery day, there's meals to be given to him, but if it's truantiing he is, shure I niver see him till the next day." For the first week after "Teacher" appeared, Pat played truant every other day. At the end of the week "Teacher," seeing that the invariable thrashing he received on his return had no effect, tried her powers of persuasion and, to her utter astonishment, the defiant little savage melted into tears. He forthwith developed a keen interest in "Teacher" and school, and for the rest of the time he spent in "Teacher's" class she had no scholar more regular in attendance than Pat.

Pat's greatest interest in school life was the drawing lesson. He was an artist of no mean skill for his years, and he certainly possessed the true artistic temperament. He had a special gift for illustrating stories and rhymes, always showing great originality of idea. Given a box of paints or crayons, Pat would be lost to the outside world for hours, and, if interrupted by a change of lesson, would fly into ungovernable rages.

Pat had also a decided sense of comedy, and this would often show itself in his drawings with irresistibly comic effect. The class was one day illustrating the story of the sacrifice of Isaac. Suddenly a Homeric peal of laughter came from Pat, and "Teacher" saw Pat holding out to his neighbour for inspection a carefully drawn representation of an exceedingly steep hill-side, up which a dejected Isaac was being dragged by a tall Abraham, dignified and stately in the long flowing

Jewish robes and a truly patriarchal beard—and crowned with that species of hat known as the “billy-cock!” The whole picture formed a very irreverent but comic conception of the Bible story. Pat’s neighbour—a small Jew of limited intelligence—was not in the least moved to laughter.

“You’ve put ‘im in a ‘billy-cock,’ an’ Teacher said they didn’t wear no ‘ets like them.”

Pat exploded impatiently, “Go’lummy, carn’t y’see it’s a joke.”

Pat had one quite ineradicable fault—the use of bad language. Correction was futile, for the habit was so ingrained as to have become unconscious. It was, in fact, his native dialect, and like most of us, he always reverted to it in moments of excitement. At football, which Pat played with tremendous pluck and enthusiasm, his language was often so violent as to stop the game. On one occasion, when one of Pat’s side kicked the ball through his own goal, his indignation was expressed with such virulence that “Teacher” had to withdraw Pat from the game and warn him that a recurrence of such language would mean his permanent banishment from the field. Pat was all contrition—he dearly loved football—and promised amendment. He had, however, hardly left “Teacher’s” side when one of his side suggested that he should play goal. “Not b—likely,” was Pat’s retort—in unconscious quotation from the works of another wild Irishman.

In common with most children, Pat loved a story, particularly if it told of fights or fires, or kindred excitements. Many of the Bible stories made a strong appeal to him, but others he found little to his taste, and his criticisms of them were frank and quite untinged with reverence. After hearing the story of Jacob and Esau and the mess of pottage, Pat commented with a wealth of disgust in his voice, “Dirty swine”—a criticism at once terse and complete.

The story of the Crucifixion aroused great ire in Pat’s breast. Turning to his unfortunate little Jewish neighbour, he exclaimed “That’s your lot, Ikey,” driving the point home with his exceedingly sharp elbow pressed against the other’s ribs.

On one occasion, the athletic tackle of the school having become very dilapidated, the Headmaster asked the boys to collect all the waste paper they could lay their hands on, so that from the sale of the paper the necessary funds could be raised to buy the tackle required. The morning after the announcement, Pat appeared in triumph with an armful of that morning’s papers all clean and hot from the press. “Teacher’s” inquiries as to how this haul had been come by were met by Pat’s brief and frank statement that he had “‘ooked ‘em off a stall.” “Teacher” talked to him long and earnestly of “meum” and “tuum” and honesty and dishonesty, but without avail. “But I shouldn’t never ‘ave anyfink if I didn’t pinch it” was an argument which “Teacher” realised that society alone could answer. She herself could only deal with the immediate problem, and it was an irate and quite uncomprehending Pat who guided “Teacher” back to the stall whence the papers had come.

“Teacher’s” period at the school coincided with the worst air-raid period. Pat’s attitude towards air-raids was a compound of amused interest and a tinge of indifference amounting almost to callousness. It is

significant of the dulness of the lives of these children of the slums that these terrible events should arouse no emotions beyond almost pleasurable excitement. The morning after one raid, “Teacher” found one small boy suddenly elevated to the position of a hero. His father had been killed in a raid the previous night. Pat confided to “Teacher” in a tone of regret “My dad’s ‘ome on leave and ‘e stood under a bridge nearly all night an’ a bomb fell quite near, but” (with a sigh for the glory that might have been his) “‘e comed ‘ome again orlright.” The line between comedy and tragedy is never so faint as in the minds of children.

An air-raid warning during school-hours and the consequent stoppage of lessons and the descent into the basement thrilled Pat with a sense of adventure. The raid, however, did not develop, and the school soon returned to the normal state, not a little to the chagrin of Pat who regretfully confided to “Teacher,” “It’s this ‘ere *garage* that stops ‘em coming.”

One Monday morning Pat appeared at school in an abnormally filthy condition. His explanation was not very clear to “Teacher.”

“The ould gel’s not come ‘ome yet,” said Pat. “Teacher” pressed for further information. The previous Saturday had been St. Patrick’s Day, and “the ‘ould gel”—which turned out to be Pat’s euphemism for his mother—had been celebrating the occasion in her best manner, with the result that “Bobby ketched ‘er” and she had spent the week-end in the lock-up.

“But what did you do for food?” asked “Teacher.”

“Oh,” said Pat, quite casually, “I took Ikey ‘ome wiv me and ‘e pinched a tin o’ salmon and I pinched a loaf, so we managed.”

“But,” said “Teacher,” “I don’t see why you could not have had a wash.”

“O, well, y’see,” said Pat, “the lidy wot lives downstairs ‘as the tap, and if she turns narsty—well, we can’t wash, that’s all.”

Poor little wasted Pat! Here we must leave him, with all his potentialities for good and evil. Society, alas! has loaded the dice against the teacher. It cannot always be so. The thousands upon thousands of Pats will some day come into that Kingdom of Heaven which is theirs.

### Indian Illiteracy.

In a pamphlet entitled “Our Duty to India and Indian Illiterates,” published by the Christian Literature Society for India, the Rev. J. Knowles points out that out of the 315 millions of India at the census of 1911 nearly 295 millions were illiterate. Of the men there were 90 per cent. and of the women 99 per cent. Even of those children who attend elementary schools, it is stated, between 83 and 87 per cent., according to the district selected, leave school without being able to read. One reason for this state of things is to be found in the fact that there are in India 147 distinct languages, with over 500 dialects. These are written in some 50 different scripts, each requiring from 500 to 1,000 types. The same language is often printed in three different scripts and the same script will be used for several different languages. Under these conditions the mere learning of an alphabet is a matter of some difficulty, and it is suggested that there should be prepared a simple script based on scientific principles and adopted by the Government as the authorised script for all languages.

## THE PLAY WAY IN LANCASHIRE.

By B. A. WILMOTT.

### V.—CHARACTER STUDY IN PROSE.

OUR earlier essay on Prose dealt mainly with our first few trial lessons, together with the general outline of the first term's work and the beginning of the second term's, and while it included dialogue, soliloquy, pure narrative, humour and description, character-study was only hinted at.

Character-study, England's great contribution to the world's prose literature, began with us orally. For when in one historical scene (The White Ship) a sailor yelled "All aboard" for the express benefit of a Prince and a Princess, and in another (Joan of Arc) a Bishop said "Pleased to meet you" when a shepherdess was ushered into his room, it was easy to bring home such incongruities of speech and action to the children. Further, we organised impromptu soliloquies, such as The Roadmender, The Nurse, Jack of All Trades, Tommy Lost; and these grew into impromptu dialogues such as Nurse and the Patient, of Jack of All Trades and a customer. Anyone in the class might at the end of any sentence criticise anything as being wrong. It occurs to me now it would have been a good thing to commit the final result to writing. For playing a character is the first step towards writing a character, and later I shall show how we combined the two.

Meanwhile to start written character-study, I read them the workhouse scene from *Oliver Twist*. At "That boy will be hung," I stopped.

"What sort of a person would the man be who said that?"

"Roundish: wearing a long black coat, and a white waistcoat," which last is Dickens' very description!

"Isn't that exactly what he *would* do and say?" was easily brought home to them, and turning from passive to active work (and from *genre* to *morale*), we composed together in class the character-sketch of an Angry Man. At home everyone wrote out a sketch of an angry man "as though it were part of a story," and the producer of the best attempt was allowed to collate these into a single sketch:—"One day I met an acquaintance and although I did not like him he made me stop and speak to him. He told me he never got into debt —," for this particular angry man was a bankrupt. Next move Dickens (*Oliver* arrives at Fagin's), and another subject, "The People Next Door" (or Round the Corner or Over the Way). Here is the description of a house "where we feel afraid to sit on such fine chairs. If anyone were to upset a tea-cup on to the carpet, I really believe Mrs. Robertson Jones would have a fit. But we liked to go in there of an evening, when Mr. R. J. had come home from town." Another house we can picture "just full of gimcrack ornaments. You can hardly see the wallpaper for pictures." A third family is "always playing waltzes on a horrid old piano." Vivid and typical touches.

The next stage is the interview. The child finds an excuse to talk to the engine driver, or the blacksmith, or the fisherman, and records the conversation. One girl, pretending to live in a village, went to see the postmaster, who had been for a ride in an aeroplane; another was the man who went to take the rent, and he takes us

into a back room where "the children are sitting, lolling, tumbling, sprawling, jumping, in fact doing everything almost at once. The floor has been swept, although paper litters the floor; flowers on the table, the piano polished and music near at hand, even the atmosphere smelt comely and of welcome"—a Lancashire interior. We go to see Mrs. Pringle, of Rose Cottage, "to tell her all the village gossip, for she lives all alone and can't get out—" Well, I'm troubled with rheumatism nowadays!" One girl wellnigh perfected the interview as a literary vehicle, giving in three perfect vignettes on end, all different in subject though similar in form. Is not this charming?—

#### A LITTLE CHAT WITH THE ROADSWEeper.

One late winter's morning, as I was walking on the main road, knee-deep in snow, I saw an old man with a heavy-looking broom in his feeble hand, and a little hand-cart by his side. He looked very tired and was leaning on his broom. Although he was very tired he seemed hearty and was singing to himself.

"You're early missy," said he. "Where are ye off to?"

"I'm going shopping," said I. "But what are you doing?"

"Well, I'm sweepin' th' snow out o' th' car lines an' off th' roadway. Now I wonder if you'd like to change places with me."

"No, no, thank you," I laughed. "It's too cold for me. But I expect it is a jolly and healthy life in the summer time."

"Ay, that it is," said he, "I'd rather be here in the summer time than in a stuffy mill."

"So would I," I said. But you're getting no work done, and I'm going to have all the shops full long before I get there. So I shall have to leave you. Good-morning."

"Good-mornin', missy," said he.

For material I had next to nothing by me at the time. But Dickens and Shakespeare are inexhaustible, and the "Characters" of Overbury, parts of the *Compleat Angler*, passages from Crabbe (if you warn the class it is not easy to write a story in rhymed couplets) Jane Eyre, The *Idylls of the King*, *Pilgrim's Progress*, and Moliere (translated) provide rich enough fare; though indeed there is scarcely need for such support once character-study has been begun.

Next we join incident and character. "How Mr. Stubbs (already known as the henpecked village grocer) went to a temperance meeting," "Memoirs of Miss Frenshaw, Governess," "A self-spoilt holiday," "Tales of All Sorts," innumerable subjects will be suggested by the children themselves; you need not trouble. Historic events, such as Bosworth Field or Joan of Arc, are less successful, as the child cannot but introduce a hundred anomalies, which pass when acted, but raise a laugh when written. The dignity of verse is wasted there.

This brings me to my final experiment in character-study, the union of oral and written work into play-writing. It is well known that Shakespeare used boy-actors for the women in his plays. How happy then a combination when a boy can both write and act his own

part at the same time. He will understand how the acted part needs to be written, and how the written part needs to be acted. Thus in preparing for a play, it is wise to let a day or two go by between the allotting of parts and the beginning of composition, so that each player gets fully acquainted with the circumstantial, mental and moral character of his rôle. (Explain and insist on each of these.) If they have done their oral and written character study properly, there is no difficulty with this. For example, the boy who played Cupid in the Golden Apple, having been the Court Jester in the White Ship and again in Joan of Arc, was therefore dramatist enough to create the new rôle of Cupid as a sprite, as I described last month.

Here are one or two extracts:—

“The village barber is a grumpy man. He has never done grumbling at his boy assistant. He is also very fond of drink, he is always going to “The Golden Lion” across the road from his shop. If his assistant arrives a few minutes late he knocks sixpence off his wages. There is nearly always a notice in his window for a new assistant. One day, etc.”

“... ‘Come, babs,’ said mother, ‘show these nice ladies your new tootn.’ At this baby opened his mouth so wide that some of the older ladies were quite shocked. Aunt Martha thrust her long bony finger in the cavern of baby’s mouth, but pulled it out very quick when baby threatened to shut his mouth. There were no more volunteers to put their fingers in baby’s mouth, and so baby was at last left unmolested. What a day it was to be sure, and what trials baby had to go through, when mother insisted on him going to bed. . . . After a series of handshakes those tyrants departed, and we were left at last in peace.”

Here description is added:—

“The day had been bitterly cold. A chilling north wind had been blowing all day. The wind swept round the street corners, blowing people’s hats off and starving the poor little street waifs. As night came on the black night air went colder and colder. The lamps seemed to flutter in and out as the chilly blasts swept up the narrow streets. . . . How the streets were illuminated when a motor-car with its lamps like two big shiny eyes came rumbling through them! The waifs then thought what it would be like to be in an eiderdown bed with a fire in the bedroom grate. They crept to their dingy dwelling-place and dreamt of the day’s happenings. Sadness was in their hearts. . . . The sea danced and sprayed the fishing smacks as they sailed from their perilous journey into the harbour. The sea splashed up the sandy beach, spoiling the large sea-castles the waifs had played round to get warm. . . . The cold wind kept on blowing all night, and it rained and hailed all the night, and the hailstones hit against the broken windows of the dingy dwelling-houses of the narrow dirty courts.”

Now some may doubt the wisdom or use of teaching children to study the character of their fellow-creatures. But surely if we all tried to educate ourselves to understand each other and make allowances for everybody, the world would be a far more sensible place to live in. Moreover, it keeps children awake to the life around them, and makes them broader-minded, and tends to remove the bitterness of class-hatred which is so evident

to those who know industrial England. Then there is the never-ceasing delight which is the meed of literary taste, best acquired by active participation in literature; lastly the negative value of early inculcating literary disgust at such things as perishable novelettes and journalese, which will destroy one of the great underminers of education.

Perhaps the most important part of this branch of the Play Way is that it can be started with boys of the awkward age of 13-15, and their interest in this is a stepping-stone to the other branches of Littleman’s pursuits. As I was only deputising when I gave a couple of lessons in this last experiment, I can only say that it showed as much promise as any other of the experiments. It is a healthy exercise for growing youths to study manly and unmanly character.

Some day I hope to experiment with boys and girls of this age, when they can have a clearer sense of prosody, in the writing of blank verse, first in plays, and then in idylls and epics; for save for Balder Dead, all the great tales of our Norse forefathers are still unwritten in English epic.

But people say: “Where shall we find the teacher for the Play Way?” The answer is, any unsophisticated person with a love of literature can without pedagogical training bring out the similar love of literature in children. The real question is: “Where shall we find the Headmasters?” For I am sensible that, had I not been given a free hand, I could have accomplished nothing. Naturally Headmasters are chary of innovation. But is not the Perse School primarily famous because Dr. Rouse never says “No thank you” to any pathfinder? The system of cram exams may have some hand in this; but such materialism we leave alone; our aim is education.

#### The Primary School Teachers and Parliament.

It is well known that from the first one of the objects of the N.U.T. has been to secure the return of teachers as members of Parliament. That object has been attained for many years past. Among members of the Union who have sat at Westminster, Sir James Yoxall, Dr. Macnamara, Major Gray, and Mr. Goldstone are the chief. The decision of Sir James to retire from Parliament and the defeat of Mr. Goldstone at the last election—Dr. Macnamara no longer counts as a teachers’ representative—would have left the Union without an official member in the House had not Major Gray been fortunate enough to be returned for Accrington. I understand arrangements have been made to approve the candidature of other official Union candidates, and that among those approved are Mr. Goldstone, prospective Labour candidate for the Uxbridge division of Middlesex; Mr. W. B. Steer, already a prospective Labour candidate; Mr. C. W. Crook, prospective Conservative candidate for East Ham (North); and Mr. A. A. Thomas, now adopted as a prospective Liberal candidate. In addition to the above, the Executive have approved the following ladies and gentlemen as suitable candidates for Parliament:—Conservatives: Mr. G. Powell, Mr. E. Sainsbury, and Miss E. Conway; Liberals: Mr. W. D. Bently, Mr. A. Flavell, Mr. T. Underdown, and Mr. H. Coward; Labour: Mr. G. D. Bell, Miss Wood, and Mr. Barraclough. Of course there is no intention these should all stand for actual election—they are simply placed on a panel of approved candidates, from which future candidates for election may be chosen if and when desired.

## SCHOOLBOY SILHOUETTES.

By N. FORD.

I sometimes think as I glance at the circle of boyish faces which assembles every evening around my somewhat ink-splashed tablecloth, to wrestle with the inevitabilities of home-work, that if the schoolmaster could but shed his professional skin now and then, and view his collection of turbulent young barbarians with the unharassed eye of the merely lay observer, he would find strewn on those steep roads along which he leads or drives his little flock to the far-off heights of knowledge, many a shining moment of humour and delight.

Even in this little lamplit circle of half a dozen, anyone who follows that fascinating hobby, character study, can peg out a claim sparkling with nuggets to be had for the picking—what a gold mine a whole class must be!

The home-work club revolves in more or less order and harmony around the scintillating Bobs, who as a mighty man at Fourth Form Latin prose, and with a certain easy knack at maths withal, attracts like a powerful magnet those unfortunate fellow-students to whom the aforesaid subjects present a glacier-like mountain wall to be climbed with an ice-axe.

I must own to a weakness for Jackson—the country sportsman in embryo with his breezy manners and the vast inside pockets of his off-school coat. His keen irregular face sops up Bobs' staccato hints mechanically, but lights up with the orator's fire when someone casually enquires whether rabbits can be killed by a catapult.

Then there is Herbertson. A handsome face is Herbertson's, classically dark, with an expression enigmatic as Mona Lisa's smile. At fourteen he looks intellectually tired as though all the wisdom of this wise old world had filtered through his brain. "A cool cuss" the circle votes him, owing to his easy habit of appropriating the nearest pen, and the nonchalance of his drawl. Herbertson will be dangerous—I catch myself studying his looks for the fashionably imperfect hero of my next short story. If Herbertson grows up very, very good I owe myself quids and quids.

Again comes Robert Browning Barker, whose exterior of rosy fat gives no indication of his ever rising to those pinnacles of greatness which must have been expected of him in his long-clothes infancy.

When in doubt as to the exact classification of a wayward verb, Robert Browning chucks a coin and leaves it to fate.

An intense moment this.

As an antidote to brain fag pears are handed round at this season of the year; not the sweet, tempting ones of William fame, but the stewing variety, which present to their indomitable young jaws a surface stern and unyielding as a cannon ball. On enquiry, I find that "stewers" go very cheap after being in stock some time.

This delectable fruit is bolted with the peel on in ferocious silence, then with a regretful sigh the circle turns to French.

I shall miss them, I know, when they grow up, even with an unsplashed tablecloth.

## CHRONICLE OF EDUCATION.

- 30, 31 Oct.—Conference at the Albert Hall, Manchester, in connection with the Association for the Advancement of Education in Industry and Commerce. Addresses were delivered by Mr. Harold Rostron, B.Sc., on "The Curricula of Day Continuation Schools;" Mr. R. W. Ferguson, B.Sc., on "The Organisation of a Works Day Continuation School Scheme by co-operation with the Local Education Authority;" Professor Bompas Smith, on "Teachers and Teaching in Day Continuation Schools."
- 5 Nov.—Opening lecture on "Twelve Good Musicians: A Century of English Music, from John Bull to Henry Purcell," by Sir Frederic Bridge, C.V.O., Mus.Doc., M.A., at the University of London, South Kensington, at 5 p.m. Admission free by ticket.
- 5 Nov.—Home Arts and Industries Association: Exhibition of Work, Drapers' Hall, Throgmorton St., E.C.
- 6 Nov.—Lecture by Dr. Montessori at the Kingsway Hall, London.
- 10 Nov.—Lecture by Dr. Montessori, at St. Bride's Institute, London.
- 11 Nov.—Special short services in schools and colleges: the anniversary of Armistice Day.
- 20 Nov.—Meeting of the Child Study Society: address by Dr. David Forsyth, M.D., D.Sc., on "The Pre-School Child," at 6 p.m., in the Royal Sanitary Institute.
- 26 Nov.—Meeting of the Teachers' Guild, at 9, Brunswick Square, at 5-30 p.m.; lecture by Dr. F. H. Hayward on "Autonomy and Montessorianism in the Teaching Profession."

## Pensions and Parliament.

On Monday, Nov. 10, Sir Philip Magnus asked the President of the Board of Education whether service in a privately conducted school, with regard to which the Board are satisfied either by a certificate from an inspector of the Board or of a local education authority or university that it is making satisfactory provision for the education of the scholars, will be accepted as qualifying service in accordance with the provisions of the School Teachers' Superannuation Act, 1918?

Mr. Fisher: The answer to the hon. Baronet's question is in the affirmative so far as service after April 1, 1919, is concerned. Service prior to that date stands on a different footing. The conditions of recognition of such service as qualifying service are more complicated, and I will send the hon. Baronet a copy of the Treasury's Declaration on the matter.

Sir P. Magnus asked the President of the Board of Education whether service in any university in receipt of grants, or otherwise, or in any university college will be accepted as qualifying service, under the Act, in respect of a professor or other teacher, demonstrator, or lecturer employed by the university or university college?

Mr. Fisher: The answer is in the affirmative provided the service is full-time service.

## PRIMARY SCHOOL NOTES.

BY OUR OWN CORRESPONDENT

### The Work of the Burnham Committee.

By the time this note appears in print the work of the Burnham Committee "in the first instance," i.e., in the formulation of a Provisional National Minimum scale of salaries, will have been completed and made known. Teachers throughout the length and breadth of the country will be debating its provisions with all the keenness of direct personal interest, and in preparation for the great decision of 30th December, when the work of the committee will have to be accepted or rejected by the full special conference of the Union summoned to meet in London on that day. It will be remembered that the committee has been at work on this business since September. Twenty-two members of the teachers' executive and twenty-two members and officials representative of local education authorities have spared neither time, energy, nor goodwill in arriving at an agreed scale. It goes without saying there has been give and take. The twenty-two teachers may not have got as good a scale as they tried for, but, on the other hand, the twenty-two local authority representatives have doubtless had to concede more than they intended. Equal pay may not have been secured by the teachers' side, but on the other hand it is practically certain a nearer approach to it has been reached than the authorities anticipated. The "carry over," if it does not reach the teachers' ideal, doubtless goes further than the authorities bargained for. All these points, however, can be decided by our readers for themselves if the scale become public property sufficiently early to be published in this journal. Now a word about the attitude of the conference on 30th December. I have only one doubt as to its attitude, and that arises from the probability that representatives from the rural areas may fail to attend in their full strength. The cost of journeying to London and remaining even for two days will be a serious drain on their slender resources. They may not, therefore, find it possible to attend. This may be disastrous, for these are the very people for whose immediate benefit the scale is constructed. Teachers from the large towns and urban districts are better paid than their rural colleagues, and will undoubtedly be present in full strength. The benefit to these may not be so striking as expected, and herein lies the danger. I am an optimist, though. I anticipate from what I know of the teachers' side of the committee that any minimum scale on which they have agreed will confer so great a benefit on so large a number that the conference will set its seal to their work. If this should not be so, the twenty-two will be placed in an awkward position. They will no longer retain the confidence of those for whom they have been working, and I suppose they and the whole executive—if the executive have approved the scale—will have to consider their positions as members of the executive. In any case, 1919 will be a memorable year for primary school teachers. May it be a year inaugurating a period of peace and progress and a fitting precursor of 1920—the jubilee year of the N.U.T.

### The N.U.T. and the L.T.A.

I hear that the projected joint membership scheme arranged between the National Union of Teachers and the London Teachers' Association is not mature. Under all the circumstances this is all to the good. Joint membership, under the best possible conditions, is difficult to arrange. The details of working such a scheme bristle with danger points. There are vested interests to safeguard, professional obstacles to overcome, and official arrangements to be made, each of which, on coming to

grips with actual business, prove, like wire entanglements, almost impossible to negotiate. I understand the London teachers have grave objections to the policy of the Union in admitting uncertificated teachers to membership, and this has shown itself in the refusal of the L.T.A. to admit them. Also, London teachers are very keen on a "London rate of pay," whereas the Union has declared for a uniform national scale of salaries. These difficulties, however, were not impossible of being surmounted, but a more serious obstacle has suddenly come into prominence. I understand legal opinion has been taken in respect of this, and as a result the scheme has been abandoned for the present. The present moment is very inopportune for forcing an unpopular scheme. Teachers cannot fail to recognise the activities of such hostile organisations as the London unit of the National Federation of Women Teachers and the London Schoolmasters' Association. Each of these is engaged in active propaganda work against one or both of the two large associations, and it may well be that to force a scheme of joint membership would be the means of strengthening these hostile bodies.

### Primary School Teachers and Registration.

It is, at the present juncture, very heartening to note the forward policy of the Teachers Registration Council, as indicated by its endeavour to increase the number of registered teachers. Registration was never more desirable for primary school teachers than now. An army of new teachers is urgently needed, and this need will bring forth proposals to open up new avenues of approach to the profession. There is only one body charged with the duty of keeping watch and ward on the means of entrance, and that body is the Teachers Registration Council. Holders of the Board of Education's certificate are peculiarly interested. The standard of examination for this certificate may be raised or lowered at the pleasure of the Board; also, it is open to the Board to recognise whom it will as a certificated teacher. I do not suggest there is any intention on the part of the Board to alter its present policy, but I do suggest that in face of the existing dearth of teachers a powerful professional Council is an absolute necessity. Now the power and influence of the Council are in direct proportion to the number of registered teachers for whom it acts, and therefore those who wish to safeguard their status as teachers must undoubtedly register at once.

### Education of the Normal Child.

The London County Council Education Committee is considering the lines on which the education of the normal child of eleven years of age and upwards shall be conducted in future in order to satisfy the provisions of the 1918 Act. It is interesting to note what is meant by the normal child. The report which is before the committee defines—by inference—the normal child to be the child who has not succeeded in gaining admission either to a secondary or central school under the Council's scheme for the education of the brighter children. It is assumed that 20 per cent. of each age group may be classed as super-normal and the remaining 80 per cent. as normal. I gather from the report the central idea is to secure more PRACTICAL instruction for the 80 per cent. It is assumed that at present the education of these children is "too bookish," and in order to remedy this I notice the report mentions such practical work as tailoring, bookbinding, dressmaking, millinery, etc. I also notice the report sets up a standard of attainment in "bookish" subjects to be reached by boys and girls of 14 years of age. To those who teach these children the proposals are full of interest. I hear the London teachers are already debating them, and are intending to make their observations and recommendations known in the proper quarter.

## SCOTTISH NOTES.

### Problems of Organisation.

A leading article in a prominent Scottish daily has given rise to much discussion amongst educationists on the question of the reorganisation of schools in consequence of the demands of the Education Act of 1918. The raising of the leaving age to 15 means that considerable modifications of existing forms of study must be effected, and the fact that continuation classes are to be compulsory, and must be held between 8 a.m. and 7 p.m. must enter into the calculations of the Education Authorities in the formation of plans for the future. The writer of the article mentioned suggests that junior schools for children from 5 to 10 years of age, with intermediate schools for those from 10 to 15, should be provided, and points out that ten years in one school in the same surroundings will lead to lack of inspiration, while there would be too great a disparity between the older and the younger pupils. A more ambitious feeling and incentive to effort would result from the transference. Intermediate and secondary work could be begun earlier, and the carrying out of this scheme would tend to more complete courses of work being undertaken. In the junior school, too, the hours of attendance might be restricted to, say, four, and the teachers (presumably ladies) thus set free would be enabled to undertake continuation class work. An economy in school buildings is also probable. The scheme is attractive, and deserving of further consideration, but such expressions of opinion as have already been given are not greatly in favour of the proposal. We hope to return to the subject later.

### Educational Finance.

In last month's notes reference was made to the discontent expressed in many localities over the increased rates for educational purposes. At a meeting of the Lanarkshire Education Authority on November 6, letters of protest from eleven Parish Councils were read, and the Chairman of the Authority (Mr. H. S. Keith, Hamilton) made an interesting and explanatory statement on the subject. He pointed out that since the year before the war the average salary of teachers had been doubled; the cost of transferred schools had come on the rates; free books were provided; all material and repairs had increased two or three-fold. The cost of education was now placed on a county instead of a parish basis—and this was due to the operation of the law, not the action of the Education Authority. Parliament, despite representations to the contrary, had adhered to the old rating system, whereby in each parish there were deductions peculiar to itself. Houses and shops had deductions varying from 5 to 35 per cent.; railway deductions varied from 20 to 80 per cent., and so on; agricultural land was rated upon three-eighths of its valuation in respect of occupancy. The effect was that, in the main, the chief burden fell upon occupants and owners of houses and shops. The whole rating system required a drastic overhaul, so that the main grievance of some parishes that the allocation of educational costs were out of proportion to the expenditure for education within the parish itself would be removed. At present the total cost of education in the county was distributed over the parishes in proportion to their assumed rateable ability to pay.

### Library Facilities under Education Act.

Under Section 5 of the Education (Scotland) Act, 1918, power is given County Education Authorities, as an ancillary means of promoting education, to provide library facilities for children and young persons attending schools or continuation classes, and for the adult population. The Council of the Scottish Library Association have communicated with the County Education Authorities of Scotland urging that these powers should be exercised to

develop a public library service in rural areas, and in order that existing public libraries in county areas may, where necessary, receive financial assistance from the County education funds for the extension of their activities. These at present are seriously restricted by the statutory limitation of the public library rate to 1d. in the £.

### Workers' Educational Association.

This organisation is making considerable headway in Scotland. In Hawick, a town of some 16,000 inhabitants, the Branch has a membership of 358, and is supposed to be the largest in Scotland. The Roxburghshire Education Authority has given a grant of £60 towards paying lecturers' fees, and several members spoke highly of the movement. It is gratifying that in a manufacturing town like Hawick the workers should be so willing to attend lectures and classes, and a greater expansion of this movement in the near future is looked for.

### Personal.—Appointments.

For the Rectorship of the Royal High School of Edinburgh, rendered vacant by the appointment of Dr. Strong to the Professorship of Education in Leeds, Mr. W. King Gillies, Rector of Hutcheson's Boys' Grammar School, Glasgow, was chosen. Mr. Gillies is a native of Ayrshire, an M.A. (Hons.) of Glasgow, and B.A. (Hons.) of Oxford. He has held various appointments in Scotland and has always taken an active part in the work of the Educational Institute of Scotland, and is convener of the Law and Tenure Committee.

Mr. Bertram M. Laing, Aberdeen University, has been appointed lecturer in philosophy at Sheffield. Mr. Laing was awarded the M.C. and has done good work in connection with the Army Education Scheme.

### University News.

Mr. Bonar Law, M.P., succeeds President Poincaré as Lord Rector of Glasgow University. In the recent election Mr. Bonar Law received 1,073 votes, Professor Gilbert Murray 726, and Mr. Bertrand Russell 80. In 1914 President Poincaré was elected unanimously, and at the last contested election, in 1911, Mr. Birrell defeated Lord Beresford.

The election of Lord Rector for St. Andrews University, which took place on November 1, resulted in favour of Sir J. M. Barrie, who polled 283 votes, his opponent, the Marquis of Bute, receiving 139.

### The Scottish Geographical Magazine.

The October number of the Magazine of the Royal Scottish Geographical Society is worth the attention of teachers of geography—and especially of those who are acquainted with Edinburgh. It is an Edinburgh number pure and simple, and its contents are designed to illustrate the origin and growth of the city and to furnish the history of its cartography. Its contents include a chronological map, showing by means of colours the expansion of the city from the earliest times to the present; excellent plans and maps of the city—19 altogether—dating from 1544 to 1852; and articles by Professor Geddes and Captain Mears. The reproductions of old maps are specially interesting and valuable. Prof. Geddes, an expert in town planning, traces the growth of Edinburgh, showing that it did not become a place of importance until the 12th century, that vicissitudes of history encouraged its growth or contraction, that apparent medley in the building of the town can be explained by a study of history, geography and geology. Incidentally we learn that the reason for the growth of Edinburgh as a medical school was the dirt, overcrowding, and deficient water supply of long ago. Capt. Mears carries the story back to the period when no documents are available, and shows how much can be deduced from the study of the remnants of past conditions which still persist through all the centuries of change. A most interesting number.

## EDUCATION ABROAD.

## NEWS ITEMS.

**Bolshevik Education.—Another View.**

In the course of a letter to the "Manchester Guardian" Mr. Paul Dukes, who has recently returned from Moscow, says that in his eulogy of Lunacharsky's system of Education: "Professor Goode treats his subject from a very superficial standpoint. He was obviously shown Moscow schools conducted by people who are a rare exception to the general rule if they whole-heartedly supported every innovation of the present Commissary of Education. In order to introduce a Communist element into the teaching profession the Government were driven to abolish any standard of education for teachers, with the inevitable result that the standard of mentality, and unfortunately also of morality, of teachers, especially in the villages, has sadly sunk. In provincial districts the first qualification for a teacher is too often not an adequate education nor any moral qualification, but the possession of a ticket of membership of the Communist party. The Soviet of the Government of Petrograd has decided that no teachers of the former staff shall have any voice in the administration of schools in that province, which is to be concentrated entirely in the hands of Communists. Professor Goode passes in silence over the middle schools, which, in the effort of the authorities to abolish class distinctions, have been left to go to rack and ruin, and are now in a state of disorder out of which no education, enlightenment, or good of any sort can come. Professor Goode is apparently ignorant of the violent opposition of the teaching profession to the abolition of examinations and rewards for diligence, so that the laziest will leave school, after automatically passing through the stipulated number of classes, on the same footing as the most assiduous. Neither was Professor Goode informed of the frightful evils resulting from compulsory mixed schooling, against which parents cry out helplessly in horror, which has brought education in some schools almost to a standstill.

"The desirability or undesirability of the suppression of religion in Russian schools may be open to discussion, but there is nothing now to replace it, for the teachers are not only discouraged but deliberately hampered in any attempt to exert moral influence over their pupils lest their admonitions should have a "counter-revolutionary," that is anti-Bolshevik, tendency. In all elementary and middle schools, or, as the Bolsheviks have reconstructed them, labour schools of the first and second degree, the *moral* of the children has been wrecked. Far from there being a guiding influence over them, the children are encouraged to lord it over the teachers, even in some cases to the point of determining how much and what the teachers shall eat. It is no discredit to Professor Goode that he did not discover these painful facts, which his hosts, naturally enough, would be studious not to reveal. It would have needed endless probings into the unseen and abundant personal and intimate conversation with parents before they would conquer their natural timidity and unburden the weight which lies so heavily on their hearts.

"Be it far from me to decry those positive aspects of the Bolshevik educational system which do indeed mark an advance. I have drawn attention to them elsewhere, and no one welcomes them more than I. But I unhesitatingly declare that all the progress achieved by Bolshevik administration in the sphere of education is more than outweighed and rendered nought by the evil wrought by upstarts who in their hatred of religion and the accepted standards of morality go to the opposite extreme and would utterly abolish morality as a factor in children's education. I cannot but believe that this, like most evils of the Bolshevik regime, is but the inevitable result of subjugating the good of the community to political and party interests."

**In Memory of Rupert Brooke.**

A prize to the value of three guineas annually has been given anonymously to Rugby School, in memory of Rupert Brooke, for the best essay on a subject in connection with modern poetry or drama.

**Scholarships for Doctors.**

Mr. Francis Fletcher has left the ultimate residue of his fortune of £39,000 to the University of Birmingham, to provide scholarships for boys and girls who desire to enter the medical profession. One of the conditions is that only the sons or daughters of bona fide working men and women shall be eligible to compete and the wage of the parents must not exceed 50s. a week.

**Grants to Cadets Opposed.**

The Labour representatives on the Hampshire County Education Committee opposed the payments of grants to county scholars belonging to the cadet corps; the arguments were that the allowances encouraged militarism, that bayonet exercises were brutal, and that the establishment of cadet corps was contrary to the League of Nations.

**Home-work, particularly Essays.**

"The Middlesex County Times" voiced the complaints of some secondary school children and their parents. Many scholars are overworked, so it is said, and English subjects set to encourage thinking and searching among books often fail of their purpose because they are too abstruse and unsuitable.

**Special Congress of Irish Teachers.**

Teachers in Ireland are making strong efforts by special congress at Dublin and in other ways to secure increases in salary, and are demanding that the recommendations of the Killanin Committee shall be put into operation—in brief they require a better scale and the war bonus to be made permanent.

**Classes for Stammering Children.**

Employers are none too ready to take into their service young people who stammer, so the London County Council are making an attempt to cure the worst cases. Several central classes are being opened, specially trained teachers are employed, and twenty lessons will be given to the children, whose travelling expenses will be defrayed by the Council.

**Women Teachers Dissatisfied.**

A meeting of the National Federation of Women Teachers was held at the Central Hall, Westminster, to protest against the constitution of the National Standing Joint Committee on Teachers' Salaries. The women object to the over-representation of men and to the exclusion of women teachers' organisations, and say that no settlement of the salary question will be effected until women are adequately represented on the committee.

**British Children in Germany.**

Many officers and men of the army of occupation have taken their wives and children into Germany; the education of the boys and girls is presenting a minor problem, which may be solved by the Y.M.C.A.

**Shakespeare for Children.**

The Rev. Principal D. J. Thomas is chairman of a committee of teachers formed for the purpose of making the children of Wood Green better acquainted with some of Shakespeare's plays, and a performance of the "Merchant of Venice" was recently held at the Wood Green Empire; two thousand children were present to enjoy the entertainment provided by the Ben Greet Players.

## SUBJECTS AND METHODS.

### A First Talk about Geometry.

I entered the room where the children were assembled to whom I was about to give their first lesson in the subject of Geometry. Some of them I already knew, and I noted that most of the class looked bright and intelligent. The impression encouraged me, for I was naturally anxious to succeed in awakening interest on the part of my young audience.

"We are going to talk about a subject that is quite new to you," I said. "It is called Geometry, and when I tell you that it owes its name to two words one of which means the Earth, whilst the other means to measure, you will not be surprised to hear that a great deal of our attention will be given to size and measurement. We shall have to think about shapes, too. But, first of all, let us say a few words about this name. You all, I expect, learn Geography. Do you know what that name means? No! Well that name also comes from two words, one of which means the Earth, and the other to write. Who can guess which part of each word must mean the Earth? Who said Geo? You, Charlie? You are nearly right, for the Greek word *Ge* means the Earth. The rest of the word Geometry comes from a Greek verb meaning to measure, and the remainder of the word Geography from another Greek verb used for to write. Very well then, as I said, we shall be learning about size and measurement and shape in connection with all sorts of objects as well as the Earth itself. Let us begin by asking ourselves whether either my ruler or this box of chalks, or this blotting-pad can go into that drawer."

Sharp and clear come the assertions that the ruler cannot go in and that the box of chalks cannot either; but the pad causes some doubt, though the opinion in general is that it can.

"Why do you say that the ruler will not be able to go into the drawer?"

"Because it is too long."

"Quite right, and what makes you sure that the box of chalks will not?"

"It is much too high."

"Right again. Leave the pad for a moment and tell me whether, if the ruler were only half the length and the box not higher than that pencil box, it would be possible to get each into our drawer."

"Oh, it would be quite easy then."

"Now, Eric, what do you think about the pad?"

"Well, it is not too high, but I am not sure about the length and the width."

"Ah! now we are getting on, for what you are really telling me is that before we can say whether the pad we wish to put into the drawer can go in, we shall have to find the correct answers to three questions, namely, Can we be sure, firstly, that the pad is not longer; secondly, that it is not broader, and thirdly, that it is not higher or deeper than the drawer itself? If it is neither longer, nor broader nor deeper, we can put it in, but if it is either one or more of these, we cannot. All the objects around us possess **length** and **breadth** and what we speak of sometimes as **height**, sometimes as **depth**, sometimes as **thickness**, and we call all these objects **solids**. Now I should like next for everyone to try to think not only of the best words but also of the smallest number of them into which we can put what the last sentence tells us. When we have found what seems to be the shortest and most suitable form, we will learn it by heart and call it the definition of a solid. I want you to remember in talking about Geometry that it is important to say exactly what we mean and all that we mean and that we must also be careful not to waste any words in expressing ourselves."

After obtaining from each pupil some attempt at the definition required, I suggest my own wording, and with the approval of the class we decide to define a solid thus:— A solid is that which has **length**, **breadth**, and **thickness**. I remark that the longest way of the solid is as a rule called its length, the shortest its thickness, and that which is neither the longest nor the shortest its width.

"Suppose we want to know how long and how broad and how high some solid is, how shall we find out?"

"With a ruler."

"You are right, Frank, but in what way?"

"By measuring."

"Yes, if you mean what I believe you do, that is that we can compare a regularly marked ruler whose length we know from the marks on it first with the length, say, of the solid, then, perhaps, with the width and then with the thickness. Each of the three quantities we measure is called a **dimension** of the solid. Do not be frightened by that word dimension; it just means a measurement, for it comes from the Latin verb *mentior*, that is I measure. So every solid has three dimensions. Even a ball or a body of an irregular shape is a solid, too, and has that number, as I shall explain another day, but we began with a solid like a pad because it is simpler to understand first. If you do not know your 'length table' very thoroughly, look for it in your Arithmetics before our next talk and learn it very carefully, for we shall often need to use it, and I am sure you will agree with me that it would be a pity and a mistake always to be wasting time by being obliged to search for what ought to be in our minds ready for us. We shall soon have to leave off for to-day, but I do not want to leave you without finding out about that pad—which we seem to have been forgetting lately—whether it will go into that drawer or not. I might ask one of you to come and try, but suppose that we wished to find out not only about the one on my desk, but about yours as well, which may not all be of the same size, do you not think it would be better for each of us to measure his own pad with his own ruler and for me to measure the drawer? Then whenever anyone's three measurements were all smaller than mine of the drawer, we could be quite sure that if we tried, the drawer would take that pad. If on the contrary, yours for example, Eric, were not all smaller, then no amount of trying would make your pad go in. Now, before we meet again, think of what I have been saying, measure any books or cubes or boxes you like, and try fitting one into another when possible, and tell me next time what you have done. You might think also of what I said about the ball, and ask me about that when we meet again."

CONSTANCE I. MARKS.

### Home Lessons.

The question of home lessons is revived at the beginning of every school session, and recently the matter has been given prominence to through a discussion in a Scottish newspaper. Various types of parents have furnished their views, which are naturally as diverse as the writers themselves. A headmaster has joined in, and treated the matter more exhaustively, pointing out what should be done towards pupils of various ages. Very young children should have no home work; for older pupils no new work should usually be given out; whatever is to be undertaken at home should usually be in the nature of an application or illustration of what has been done in school. This is not asking too much, and does a little to encourage independent effort. But no hard and fast rules can be laid down; there may be conditions in the social environment of children that make any kind of home work inadvisable. Teachers must know their pupils, and exercise intelligence and common sense in dealing with them.

### Geography Teaching.

BY CAPT. N. G. BRETT-JAMES,  
Mill Hill School.

At the present moment everyone seems interested in education, even if their interest only takes the form of a rather reckless criticism of those who are endeavouring to educate the young. Every critic feels competent to suggest the ideal curriculum, even if he has never had the slightest experience of trying to fit in conflicting subjects and adjust a time table to the demands of all specialists on a staff, the parents, the Governing Body, inspectors more or less sympathetic, and the great publicists who from time to time write to the daily press.

It is pleasant, however, to find oneself for once in agreement with somebody, and the recent letters and speeches of Sir Harry Johnston seem to give to the modern subject of Geography its fair share of commendation.

As taught at the present time, Geography is one of the most fascinating and one of the most useful of all subjects. The Geography teacher can say with John Wesley: "I take the whole world for my parish." And this, not only in the literal sense, but in the sense that all human knowledge and achievement, all history and science, can, if desired, be included in this vast subject. Geography is a link between science and the more humanistic studies, and anyone who has not been taught Geography on the modern approved methods would be literally amazed at the tremendous strides that Geography teaching has made during the last few years.

There are nowadays opportunities open to the younger pupils of making models of the various geographical forms, and others who are more advanced keep careful records of the rainfall and sunshine, the changes in the temperature and weather; and in some cases take observations of the height of the sun, and study some of the more elementary portions of astronomy.

Besides this more scientific aspect of the subject, boys now get to appreciate the great regions of the world—the forests, the grass lands, the cold deserts of the Northern Continents, the fluctuations in the Mediterranean climates and in the tropics. They begin to appreciate the difficulties of transport, the importance of canals both in the old and new world, the meaning of sea-power, the history of the great explorers, and the romance which travel always implies. It is possible to get boys to understand the immense number of people who have had to be set to work in order to provide them with their breakfast, or with the simplest articles of apparel. They can understand, at least in part, the labour problems of Europe, and the even more complex difficulties of China and Japan. They realise that when the Japanese begin to undersell us in some of the markets of the world it may be, and almost certainly is, because their standard of life and their consideration for workpeople is so much lower than our own. The difficult problems of tariff reform and free trade can be discussed and envisaged, though it is not necessary to come of necessity to any definite decision as to which policy is the best for the country.

If Geography teaching improves in anything like the same proportion in the next ten years to the advance which it has made in the past ten years, it will be impossible for members of Parliament and other public workers to have that complete ignorance of the elements of Geography which is too common an attribute of even some of the most eminent of them. The mere man-in-the-street is almost entirely devoid of any appreciation of Geography, but his sons will be competent to give a verdict on many problems which the father could not appreciate.

In the elementary schools the Geography teaching is improving very rapidly. Mr. Archer, of Aberystwyth

University, has a most stimulating book on methods for interesting elementary school children in Geography; and if his ideas are carried out at all generally the working man of the future will have quite an astounding knowledge of the many difficulties which will face him, and of some at least of the possible solutions.

The war has taught us the value of Geography. The Germans always paid a tremendous amount of attention to it, and perhaps they tended to ignore the human element too much.

It has been surprisingly interesting during the last four years to point out how history has been repeating itself almost in detail, partly because human nature in historic times has not vitally changed, and partly because Geography tends to remain the same. The advance of the Germans through Belgium, the successive waves that overwhelmed Northern France, the gradual driving back of the invaders from one river to another, all recall the adventures of Cæsar almost two thousand years ago.

Antwerp in the hands of an enemy at the present time would still be a pistol at the heart of English trade, as it was under Napoleon. And it was quite amazing to meet a Battalion Commander by no means untravelled who thought that Antwerp was on the Elbe, and that the Elbe flowed into the Baltic Sea! Fortunately his sphere of operations had not been on the Western Front!

Not long years ago an old boy commented on his school days by lamenting his ignorance of Geography, and said that he wished he had learnt the depth of water in the harbour of Para and the size of steamers which could go into port in Cyprus. It is, of course, impossible in one or two periods a week to give such detailed information as this, but if boys, and girls too, are taught the principles underlying geographical study they will not find it hard to acquire such specialised knowledge for themselves.

English people owe a tremendous debt of gratitude to Mr. Mackinder, whose "Regional Geography" really laid the foundations for most of the modern Geography teaching. Most of those who now teach this important subject have either literally "sat at his feet" at Oxford, or owe a great deal of their interest to the books which he has published of the subject. Dr. Hugh Robert Mill is another who has made Geography his life work, and all schoolmasters are in a great debt to him.

Geography has long ceased to be the old-fashioned list of bays and capes. Quite a large amount of reasoning is required nowadays, and the examination papers make it impossible to adopt a system of cramming. When a boy is asked to discuss the situation of important town; to explain how gaps in hills and mountains have influenced emigrations; what are the causes which determine the climate; the various rainfall regions of the world; the geographical reasons for the decline of Athens; the change in commercial circles which the opening of the new canals will cause; he is obviously being given a series of questions which demand thought, and distinct reasoning powers.

On a recent occasion the various Forms which I teach were set papers dealing with all the continents except Europe. The syllabus which I had sent to the examiners comprised Europe alone, but as the examination papers were of a sensible modern type and the boys had been taught on somewhat modern lines, they were able to render quite a good account of themselves, although they had not specifically prepared the continents on which they were examined. This would seem to be a proof of the lack of cramming which is so important a feature of the present methods.

If men of the type of Dr. Miller and Mr. Mackinder, and others who owe their enthusiasm to the teaching of these pioneers, could go round the country lecturing I believe they would find splendid material, and the political outlook would be far brighter.

## BLUE BOOK SUMMARY.

### Universities Commission.

The King has approved the appointment of a Royal Commission to consider the applications which have been made by the Universities of Oxford and Cambridge for financial assistance from the State, and for this purpose to inquire into the financial resources of the universities and of the colleges and halls therein, into the administration and application of those resources, into the government of the universities, and into the relation of the colleges and halls to the universities and to each other, and to make recommendations.

The Commissioners constitute one body, but they are authorised to sit for purposes of inquiry in three separate committees.

Chairman of Commission : Mr. H. H. Asquith.

Oxford Committee : Mr. H. H. Asquith (chairman) ; Lord Chalmers, late secretary to the Treasury ; Sir John A. Simon ; The Very Rev. T. B. Strong, Dean of Christ Church, Oxford ; Sir H. A. Miers, Vice-Chancellor of Manchester University ; Professor W. H. Bragg, F.R.S., Quain Professor of Physics in London University ; Professor W. G. S. Adams, Gladstone Professor of Political Theory and Institutions, Oxford ; Miss Emily Penrose, Principal of Somerville College, Oxford ; Mr. Albert Mansbridge.

Cambridge Committee : Mr. G. W. Balfour (chairman) ; Mr. Arthur Henderson, M.P. ; Sir W. Morley Fletcher, F.R.S., Fellow of Trinity College, Cambridge ; Sir Horace Darwin, F.R.S. ; Mr. G. M. Trevelyan ; Dr. H. F. Anderson, M.D., F.R.S., Master of Gonville and Caius, Cambridge ; Miss B. A. Clough, vice-principal of Newnham College, Cambridge ; Dr. Montagu R. James, Provost of Eton College ; Professor Arthur Schuster, Fellow and Secretary of the Royal Society and Hon. Professor of Physics at Manchester University.

Committee on Estates Management : Lord Ernle (chairman) ; The Hon. Edward Strutt ; Sir Howard Frank ; Sir J. H. Oakley, past president of the Surveyors' Institution ; Mr. H. M. Cobb, Fellow and Member of the Council of the Surveyors' Institution.

The secretary of the Commission is Mr. C. L. Stocks, an assistant secretary to the Treasury. There are three assistant secretaries to the Commission, viz. : For the Oxford Committee, Mr. Marcus N. Tod, Fellow and Tutor of Oriol College, Oxford ; for the Cambridge Committee, Mr. Edward Bullough, Fellow of Gonville and Caius College, Cambridge ; and for the Estates Committee, Mr. C. B. Marshall, of the firm of Lewin, Gregory, and Anderson.

The offices of the Commission are at 2, Queen Anne's Gate Buildings, Queen Anne's Gate, London, S.W. 1.

### Departmental Committee on Scholarships.

The President of the Board of Education has appointed a Departmental Committee to inquire into the working of the existing arrangements

- (a) for the award by Local Education Authorities of scholarships tenable at Secondary Schools or institutions of higher education other than Universities or institutions for the Training of Teachers ;
- (b) for the provision of free places in Secondary Schools under the Regulations of the Board of Education ;

and to make recommendations with a view to improving such arrangements and thereby rendering facilities for higher education more generally accessible and advantageous

to all classes of the population, regard being had (*inter alia*) to the migration of pupils from one school or area to another.

The members of the Committee are :—Lieut. Commander E. Hilton Young, D.S.O., M.P. (Chairman), Mr. E. K. Chambers, C.B., Mr. R. F. Cholmeley, O.B.E., Sir Mark Collet, Bart., Miss E. R. Conway, Miss Philippa Fawcett, Mr. F. W. Goldstone, Mr. H. J. Hallam, Mr. R. T. Jones, Mr. J. Murray, M.P., Major the Hon. W. G. A. Ormsby-Gore, M.P., Mr. C. J. Phillips, Mr. T. J. Rees, Mr. R. Richardson, M.P., Miss B. M. Sparks, with Mr. H. E. Mann as Secretary, to whom all communications should be addressed at the Office of the Board of Education, Victoria and Albert Museum, South Kensington, London, S.W.7.

### Boy Mechanics for the Royal Air Force.

The Air Ministry has recently instituted a new scheme to secure the entry of well-educated boys for a systematic course of training as skilled craftsmen for service with the Royal Air Force.

Under this scheme boys will be entered between the ages of 15 and 16 years for a period of ten years' colour service, followed by two years' service in the reserve. During the first three years they will undergo a course of educational and workshop training, at the end of which those who have passed the requisite tests will be promoted forthwith to the rank of leading aircraftmen in one or other of the skilled trades.

To give scope to the more capable and ambitious boys, and to ensure that the Air Force shall secure the full benefit of their ability, a certain number of those who show most promise during their training will be chosen for an additional six months' course of higher instruction, being promoted at once to the rank of corporal. From among these, some may be selected for the grant of a commission, and will proceed to the Cadet College for training as flying officers with the cadets entered by open competition. There will also be opportunities for promotion to a commission at a later stage for those who show their suitability during their service in the ranks.

In order that the opportunity of competing for entry into the Royal Air Force under these conditions may be brought within the reach of the largest possible number of boys, two distinct methods of admission are being arranged : (1) open competitive examinations ; (2) examinations limited to candidates nominated as in every way suitable by the local education authority of their district. A limited number of candidates with service claims may also be admitted on the nomination of the Air Council, subject to their passing a qualifying test only.

The first examination under the scheme will be one for boys nominated by their local education authority, and will take place in December. Full particulars in regard to the arrangements of the grant of nominations for this examination have been circulated to the local education authorities throughout the country.

During the war it was not possible to give enlisted boys more than a few months' training, neither was it feasible to confine the entry only to boys of sufficient intellectual attainments to ensure that they would benefit by a long apprenticeship in R.A.F. technical trades. The new scheme constitutes an entire departure from the methods imposed by war conditions, and is designed to meet the requirements of the R.A.F. as organised on a permanent basis. Training centres are consequently being reorganised to deal with this new entry, and the machinery of education, both general and vocational, is being largely increased and developed for the same purpose.

## ASSOCIATION NEWS.

### The Teachers Council.

The number of applicants for registration is now a little over 31,000. A revised edition of the Official List of Registered Teachers is now in preparation. Qualified teachers who are not already registered should not delay their applications. After the end of May, 1920, the uniform fee for registration will be increased to two pounds, but those teachers who are accepted during the next few months will be required to pay only the present fee of one guinea. At a recent conference of the London Teachers' Association it was unanimously resolved that the members should support the registration movement. The Council has decided to institute an Official List of Probationers, open to teachers who are not yet fully qualified for admission to the Register. Particulars will be announced in due course.

### Assistant Masters in Secondary Schools.

The annual meetings of the Incorporated Association of Assistant Masters in Secondary Schools will be held on Thursday, Friday, and Saturday, January 1, 2, and 3, 1920, at the London Day Training College, Southampton Row, W.C. The Council of the Association will meet on all three days.

The general meeting of members will be held on Friday, January 2, and on the afternoon of that day the Rt. Hon. H. A. L. Fisher, the President of the Board of Education, will address the members.

The annual dinner of the Association, which has been in abeyance since 1914, will be held at the Holborn Restaurant on the evening of Friday, January 2, at 7 p.m. Invitations to be present have been accepted by the Secretary of the Board of Education, the Chairman of the Incorporated Association of Headmasters, the Chairman of the Headmasters' Conference, Sir Robert Blair, etc.

### School of Folk Song and Dance.

The English Folk Dance Society, under the directorship of Mr. Cecil Sharp, is organising a School of Folk Song and Dance, which will be held in London during the Christmas holidays. Its purpose is to give students a practical and theoretical knowledge of the traditional songs and dances of their own country and to enable them to qualify as teachers or performers in these subjects. The number of students which the School can accommodate is strictly limited, and as many entries have been received, immediate application is necessary.

### The Uplands Association.

A report of the recent doings of this body was given in the Supplement for October. The Uplands Association aims at providing means of active study and co-operation for persons interested in the reform of school life and teaching. It is not concerned with the criticism of public administration of education or with any form of political or religious agitation. Its main principles are that education should be conducted, as far as possible, in the open air; that schools should be centres of communal activity; that individual differences in child nature and the study of stages of development should be regarded in any reform of school practice; and that balance should be maintained between intellectual, æsthetic, and practical experience. The Association issues a circular giving full particulars of its constitution and aims. This may be obtained from the Secretary, Miss T. M. Pugh, 3, Talbot Road, London, N. 6.

### London Chamber of Commerce.

The annual presentation of scholarships, medals, and prizes awarded to successful students in the examinations held by the London Chamber of Commerce, through its Commercial Education Department, will take place at the Mansion House on Friday, December 5th, at 3 p.m. Lieut.-Col. Sir Hamar Greenwood, Bart., K.C., M.P. (Secretary to the Department of Overseas Trade) will distribute the prizes.

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### London University Site.

It is announced that London University will be extended on the site left vacant in Bloomsbury, near the British Museum. The scheme is an ambitious one, involving the further destruction of certain parts of Torrington Square and the utilisation of expensive land on the Duke of Bedford's estate.

### London University Principal.

Sir Cooper Perry has been appointed by the Senate of London University to the post of Principal Officer, which has been in abeyance since the resignation of Sir Henry Miers in 1915. He will take up his new duties on February 1 next.

Sir Edwin Cooper Perry has had a distinguished career in the medical profession. He was educated at Eton, Cambridge, and London Hospital, and became consulting physician and superintendent of Guy's Hospital, member of the General Council and Distribution Committee of King Edward's Hospital Fund for London.

### Cambridge.

Dr. Nuttall, Quick Professor of Biology at Cambridge University, has received a letter for transmission to the Vice-Chancellor from Mr. P. A. Molteno, M.A., LL.M., of Trinity College, and his wife, stating that they will be glad to present to the University two sums of £20,000 and £10,000, making £30,000 in all, for the erection and maintenance of a suitable building to be used in future as an Institute for Parasitological Research in the University, providing that the University finds the site. Hitherto the work of Dr. Nuttall's department has been greatly hampered by an utterly inadequate accommodation. This gift will, without doubt, be most gratefully accepted by the Senate. A grace to that effect appears on the paper for the Congregation.

### Battersea Polytechnic.

Dr. R. H. Pickard, F.R.S., Principal of Blackburn Technical School, has been elected Principal of Battersea Polytechnic. He is a distinguished scientist, specialising in chemistry. He is also an able administrator and a keen sportsman. His work at Blackburn is reflected in the urgent call for expansion in the large Technical School opened by the late King Edward. During the war he has done a great deal of valuable research work for Government departments in connexion with anæsthetics and explosives, and the Minister of Munitions has paid him a fine tribute.

### Loughborough Technical College.

In the quarterly report of the Leicestershire Education Committee, presented at the meeting of the County Council on Wednesday, 12th November, it is stated that 181 full time day students have been enrolled in the Loughborough Technical College in addition to 12 Colonial students. Of the 181 students, 55 are private fee-paying students, 78 ex-Service officers Division "A," 30 ex-Service officers Division "B," nine broken-time students, and nine student apprentices.

### Manchester Schools as Hospitals.

It is unlikely that all the schools taken over by the military will be restored to their original use within twelve months. Several elementary schools, one day training college, and two secondary schools, all of which have been occupied as hospitals, have not yet been handed back to the education authority.

## PERSONAL NOTES.

### Captain F. W. Goldstone.

Captain F. W. Goldstone has been adopted as the Labour candidate for Uxbridge at the next Parliamentary election.

### Mr. A. C. Ainger.

Mr. A. C. Ainger, the author of the Eton school song, died at his house at Eton, aged 78 years; his connection with Eton College was life-long, as a student, a master, as secretary of various movements, both before and after his retirement, and as recently as 1917 as the author of "Memories of Eton sixty years ago." His many good qualities as a teacher and a man endeared him to all who came closely into contact with him.

### Captain T. R. Mayne, Mus. Doc., L.R.A.M.

Captain Mayne, in the service of the Willesden Education Committee, has had conferred upon him the degree of M.A. (honoris causa) by the University of Ireland.

### Sir Henry Miers.

Sir Henry Miers, Vice-Chancellor of the University of Manchester, has been appointed a member of the Advisory Council to the Committee of the Privy Council for Scientific and Industrial Research.

### Mr. J. A. Robson.

Mr. Robson has been secretary for higher education under the Durham County Council for twenty-seven years, and has just retired. For a long period Mr. Robson was secretary to the Keighley Mechanics' Institute, which, in his day, sent more students to the Royal Colleges of Science and Art at South Kensington than any other English institution.

### Lieutenant-Colonel Ferguson.

Lieutenant-Colonel Ferguson, in memory of his son Douglas, Queen's Own Cameron Highlanders, who died of wounds on 21st December, 1914, has presented a chess challenge cup to Eton College. Douglas Ferguson won the chess tournament in 1911, and his name appears on the cup as the first winner.

### Mr. T. Mansel Franklen.

On his retirement from the position of clerk to the County Council of Glamorgan, Mr. T. Mansel Franklen has been presented with his own portrait in oils by the magistrates and the members of the County Council, after forty years of service.

Mr. Franklen's sense of duty and his concern for the public interest were such that he possessed a very great deal of influence, and even by those to whom he was greatly opposed in matters of policy he was respected for his honour and magnanimity.

### Lieutenant-Commander E. Hilton Young, M.P.

Lieutenant Young has resigned his honorary post under the Board of Education. He was in charge of the plans for assisting ex-service students in need of higher education courses. Mr. John Murray, M.P., has succeeded him.

### Miss Florence Davenport Hill.

Miss Florence Davenport Hill died at Headington, near Oxford, aged 90 years. Like her sister, she gave many years to public work of considerable importance. Miss Hill was one of the first women to be a Poor Law Guardian. Some of her best known efforts for reform were in connection with children; the establishment of reformatories, the boarding-out of paupers, and the formation of Children's Courts.

## Some Appointments.

Mr. B. M. Laing, M.C., M.A., Lecturer in Philosophy, in the University of Sheffield.

Mr. O. K. Metcalf, M.A., L.L.M., Lecturer on Public and Common Law, in the University of Sheffield.

Mr. T. F. Wall, D.Sc., D.Eng., Lecturer in Electrical Engineering in the University of Sheffield.

Miss F. Harmer, B.A., Lecturer in English.

Mr. G. H. Livens, M.A., Senior Lecturer in Mathematics, in the University of Manchester.

Miss E. M. Tanner, headmistress of Nuneaton High School, as headmistress of the Bedford Girls' High School, vice Miss Collie, resigned.

Mr. T. A. Warren, as Director of Education, under the Wolverhampton Education Committee.

Mr. J. Greer as Secretary of Agriculture, under the Lancashire Education Committee.

Dr. J. H. Grindley, as Principal of the Dudley Technical College.

Mr. D. G. Williams, classical master at Bradford Grammar School, as headmaster of the Crypt Grammar School, Gloucester, in succession to Dr. Crees, resigned.

Mr. Andrew Rae Duncan, M.A., B.L., the new Controller of Coal Mines, was for some years a teacher. A native of Irvine, he taught in Ayr Academy, but left to study Law. His appointment has given great satisfaction to the teaching profession.

## PUBLISHERS' ANNOUNCEMENTS.

Sir John Morris Jones, whose *Welsh Grammar* was published in 1913, has been engaged of late upon a more elementary book which the Oxford University Press hopes to publish before long. The new grammar is not an abridgment of the larger book, but a completely independent work.

The firm of W. AND G. FOYLE, the well-known booksellers of Charing Cross Road, has been converted into a Limited Company, with W. A. Foyle and G. S. Foyle, the original partners, as Directors. By this conversion the firm hope to extend their business and to give the public the finest Book service based on organisation and system.

SOME WINCHESTER LETTERS OF LIONEL JOHNSON are announced for early publication by George Allen and Unwin, Ltd. They are written by Lionel Johnson to various friends, and show a most unusually extensive acquaintance with English Literature.

The results of an enquiry into the adequacy of the adult manual workers for their duties as producers, heads of households, and citizens are to be published by Messrs. George Allen and Unwin, Ltd., in a book entitled *THE EQUIPMENT OF THE WORKERS*. It attempts to do for educational equipment what Booth and Rowntree have done for material poverty.

MESSRS. A. AND C. BLACK, LTD., have taken over from the University of London Press the *Sounds of the Mother Tongue*, by L. H. Althaus and have stocks on hand for sale. Will the trade kindly make a note of this in order to save delay in placing orders.

The University of London Press announces for immediate publication the third volume of the New Regional Geographies by Leonard Brooks, M.A., F.R.G.S., dealing with Europe and Africa. The volume is by far the most important of the series, dealing as it does with the physical and economic geography of the British Isles, Europe and Africa. It covers most of the ground for the more important parts of the syllabuses in geography for the London Matriculation and other examinations. It is illustrated with a large number of original maps and diagrams; and exercises and specimen examination questions are provided at the end of each chapter.

## LETTERS TO THE EDITOR.

To the Editor of THE EDUCATIONAL TIMES.

## Dr. Montessori's Lectures.

Sir,—Signora Montessori gave, on November 6th, a lecture at Kingsway Hall, to an imposing audience mostly composed of teachers and of others keenly alive to the momentous ideals which are stirring us all in the present crisis, when everybody has realised that salvation is in the hands of education, that education is life, and that therefore the work of the teacher must be a preparation for life.

I shall not take the lecture of Signora Montessori point by point, which would take too long. What is more, it should be done in the form of a discussion after every lecture; but as this does not seem to be considered possible, I shall point out the errors into which I think we are falling if we take Signora Montessori's views and teaching as a guide to the fundamental aims of education.

In the wide scheme and ideals of this most important work we have such basis of knowledge, such illuminating masters, that it would be arrogance or ignorance to disregard them.

Dante and Vittorino da Feltre tell us, over and over again, that the normal child is much nearer than we are to divine truth and to the elements which combine to make a man and his perfect manhood. Relying on this we have to consider the child superior to us in inner understanding, and we have to consider ourselves the means, the humbly striving means to achieve a perfect work. Now the means cannot be greater than the aim.

Signora Montessori does not regard life as the world of the child, but creates a fictitious Lilliputian world, OF WHICH THE CHILD IS THE MASTER, which the child controls, with almost no effort on his part, and which belongs to him. This is detrimental not only to his childhood, but to his future. There can be no happiness in this illusion, because it is false. The world does not belong to us—we do not control it; it is only through the infinite effort of our minds that we can master its ideals and in some measure have a part in its destiny.

The small world which Signora Montessori creates is also apart from the family, who live in the real world to which the child does not belong, and which he will despise because, to him, adults are unable to control all that he believes himself capable of controlling so easily.

The mechanical routine of moving and removing small objects made for him, where there is not even physical effort, does not constitute order—it is the work of an automaton.

On the other hand, this world needs no organised system of toy-like things, because Nature has provided a multitude of fascinating objects which come into the child's life daily, and which put into action his own imagination in attributing to them magic powers, and keep his mental activity in full play.

In creating a mechanically organised, orderly, measured world for the child, we not only segregate him from the world in which he has to live, but we destroy for him, perhaps for ever, the mental food, the activity of his imagination, the effort to make for himself a world of fancies and of beauty. We thus destroy for him the power of thinking, the power of making things serve him, and he becomes the servant of a toy.

Signora Montessori goes so far in her restriction of the child's world that she would even restrict the limits of the area in which he thinks; she would create for him a music under the sway of which he can work, a silence in which he can rest. I do not deny the power of music nor of silence, but it must not be an artificially created thing. The child must learn to find the infinite harmony which lies in gymnastics, in the silence of the fields, in the softest breath of the heavens; he must find the silence within,

he must find the leisure and the rest within. But if all this is created for him, he will never find it, because his mental activity has been destroyed by brutal mechanical force, which exercised its influence and created the object before the need stimulated his capacity for creating it himself.

On the other hand, I understand the sway which Signora Montessori's teaching exercises in creating this mechanical, inactive, irresponsible teaching. It would seem easy to be a teacher, and possibly a perfect one, under these conditions, which demand from her very little knowledge, will power, or active control over her pupils. Possibly her power is occult, and thereby positively harmful. Instead of the teacher using all her activities in friendly and humble co-operation with her pupil, instead of creating through books that mental daily exercise of attaining knowledge, and through knowledge truth, instead of being the instrument through which and by which the child understands how strenuous, how painful, and yet how beautiful and exhilarating the path of knowledge is, she becomes, by acting on the lines suggested by Signora Montessori, the embodiment of non-doing, non-willing, non-knowing; and a better world is thus again destroyed for the child, the world of books, the world of learning.

It is in no spirit of criticism that I write these lines, but out of love for England, and for English children especially, and as a humble teacher.

P. LUNATI.

St. George's Square, S.W. 1.

Nov. 7, 1919

## Dr. Montessori and a London School.

Sir,—Many years ago Dr. Montessori formed a very high opinion of a certain English schoolmistress. Doubtless this will be a matter of pleasurable surprise to most people. Probably it will be news even to the majority of the Montessori students now in London to learn that that schoolmistress was a Londoner, the late Miss Latter, headmistress of what is now called The Invicta Infant School. In her book, "The Montessori Method," the famous Italian wrote: "Already in England Miss Latter has devised the basis for a method of child education by means of gardening and horticulture. She sees in the contemplation of developing life the bases of religion, since the soul of the child may go from the creature to the Creator. . . . Miss Latter's conception is too one-sided; but . . . undoubtedly completes the natural education, which up to this time limited to the physical side, has already been so efficacious in invigorating the bodies of English children" (p. 155).

For the English students of the Montessori Method few excursions could be more valuable than one to Miss Latter's school. The London Education Authority, whose chief inspector is Dr. Kimmins, would not raise any objection to the students visiting "The Invicta," to observe the facts for themselves. To visit the very scene of Miss Latter's experiment would give the students a new view of the intuitive genius of Dr. Montessori and of her great talent for description.—Yours, etc.,

W. S.

[We detect a subtle joke in our correspondent's letter, as will others who know the Invicta School and try to connect it with gardening and horticulture.—*Editor.*]

## Rate-aided Schools and the Rich.

Sir,—I think there is an aspect of the action of the Wealdstone Council that has escaped you, which I am sure you will allow me to state. When public money is given to a school, it is in order that those who are poor—a comparative term, of course—may get its advantages under cost price. Everyone has a right to this benefit. But in the case in question the rich man's daughter is depriving the poor man's daughter of this benefit. It is within your knowledge that the great public schools, that were founded centuries ago, were intended for the benefit of poor boys. The rich have taken their heritage. You cannot, I am sure, wish this history to be repeated. Do you not agree with your contributor (p. 403) that State funds should "necessarily imply the inability of the parents to meet the expenses of a higher education"?—Yours, etc.,

J. VINE MILNE.

### The Hyperbolic Functions.

Sir.—I should like to submit, for the consideration of your readers, the following suggestions for a simple explanation of the hyperbolic functions, suitable for students who have done very little in the way of integration.

It may first be pointed out that the semi-hyperbola  $x = \sqrt{1+y^2}$  can be obtained by plotting  $x = \frac{1}{2}(e^v + e^{-v})$  and  $y = \frac{1}{2}(e^v - e^{-v})$ , just as the circle  $x = \pm \sqrt{1-y^2}$  can be obtained by plotting  $x = \cos v$  and  $y = \sin v$ . This will explain why the first two of these functions of  $v$  are called *hyperbolic functions* and indicated by  $\cosh v$  and  $\sinh v$  respectively. But it will naturally make the beginner inclined to think that the  $v$  in  $\sinh v$  is numerically equal to the length of the corresponding arc in the above-mentioned hyperbola, just as the  $v$  in  $\sin v$  is numerically equal to the length of the corresponding arc in the above-mentioned circle; in fact, as I have recently pointed out in *Engineering*, this mistake is made by some of our University lecturers in engineering mathematics. I would therefore at once draw the student's attention to the fact of the matter, in the following way:—

The above definitions give us  $e^v = \cosh v + \sinh v = r(\cos\theta + \sin\theta)$  where  $r$  and  $\theta$  are the polar co-ordinates (still taking the centre as origin). We therefore have  $v = \log r (\cos\theta + \sin\theta)$ , where the  $r$  is easily seen to be the reciprocal of  $\sqrt{(\cos^2\theta - \sin^2\theta)}$ , since  $1 = \cosh^2 v - \sinh^2 v$  so that  $1/r^2 = \cos^2\theta - \sin^2\theta$ . This gives us—

$$v = \log (\cos\theta + \sin\theta) / \sqrt{(\cos^2\theta - \sin^2\theta)}$$

from which we get—

$$dv/d\theta = 1/(\cos^2\theta - \sin^2\theta) = r^2.$$

We can thus prove, without any knowledge of the calculus beyond the simplest elements, that—

$$v = \int \theta r^2 d\theta$$

in the case of the above hyperbolic functions; and a moment's thought will show that this also holds good in the case of the circular functions: that is to say, the  $v$  in  $\sin v$  and  $\sinh v$  is numerically equal to twice the area of the corresponding sector in the above-mentioned circle and semi-hyperbola; but the integral gives this  $v$  with its proper positive or negative value.

From the first equation in the third paragraph we have  $v = \log(x+y) = \log(x + \sqrt{x^2-1}) = \log(y + \sqrt{1+y^2})$ , obtained much more easily than usual.

From the above definitions it follows that—

$$\sinh v = v + v^3/3! + v^5/5! + \dots$$

with the consequence that  $\sinh v > v$  when  $v$  is positive. But it is obvious that the corresponding hyperbolic arc must be greater than  $\sinh v$ , and therefore cannot be equal to  $v$ .

Yours, etc.,

W. F. DUNTON.

### Education for the League of Nations.

To the Editor of THE EDUCATIONAL TIMES.

SIR,

We are informed by all our leaders of thought that the only hope of preserving our civilisation intact for future generations lies in the institution of a League of Nations among mankind. It is agreed that only thus will there be avoided in the future such wars as would finally destroy human learning, culture, and morals. Most appropriately, therefore, the League of Nations Union decided, with official sanction, to organise in the schools a propaganda in support of this great ideal on November 11th, the anniversary of Armistice Day.

But may I suggest that such propaganda is utterly futile unless correlated and harmonised with school teaching in other subjects. For instance, it is, to say the least, inconsistent to combine the preaching of this great new ideal with the old teaching of history from a purely national point of view. To make such propaganda at all reasonable or effective, it must be accompanied by the teaching to every child the world over of the history not only of his or her own nation but also of the world in general.

Another essential is the education of children not only in the history of insignificant happenings in the bygone past but also of great events at the present day. But there is always the difficulty here of avoiding political or personal bias in teaching contemporary history; and often teachers themselves need educating. For instance, in a school of my acquaintance, where

contemporary events are taught, the headmaster prefaced his lesson with the remark that, "I am afraid that there is not anything very interesting to tell you, now that the war is over." One such artless sentence would destroy the value of a score of lectures on the League of Nations.

It is nothing less than a crime to inform children that the only interesting events in the world are concerned with warfare. The President of the Royal Society has just told the world that "one of the greatest, perhaps the greatest, of achievements in the history of human thought" had been made. Is not this "interesting"? That there is a glamour attaching to peace, which, if properly presented, can appeal to the enthusiasm of youth, was amply demonstrated by the success of the Lord Mayor's Show in London this month. If the ideal of a League of Nations is ever to be realised, it must be impressed upon the children of all nations that

"Peace hath her victories  
No less renowned than war."

Yours faithfully,

HUGH HARRIS.

27, Addison Mansions, W.14.

November 24th, 1919.

To the Editor of THE EDUCATIONAL TIMES.

SIR,

In my capacity as General Treasurer of the British Association for the advancement of Science, I made, before the Thursday evening discourse at the recent Bournemouth meeting, the following remarks:—

"Ladies and Gentlemen. You are aware that after paying printing and office expenses, the funds of the British Association are devoted to Scientific Research. For more than 80 years we have spent more than £1,000 a year on Research, long before ordinary people had heard of Research.

"Every year we form many Research Committees; each of them is formed of the foremost men of Science of Great Britain, who receive none of the money themselves, and their accounts for mere out-of-pocket expenses are carefully audited. These researches in the past have created some entirely new sciences, have led directly and indirectly to the creation of many new industries, and they have largely produced the world's present natural knowledge. And now to my point. Yesterday, a very prominent member of the Association asked me about our finances. I had to admit that even before the war we were meeting with difficulties due to the increased cost of printing and other things; that since the war we have been behindhand to the extent of more than £1,000 every year; and that we have never yet asked for the help of moneyed men. The only gift we have ever received from a moneyed man was a voluntary gift from Sir James Caird, who handed me £11,000 at the Dundee meeting. My questioner said we ought to ask for help and that he was willing to start a fund with a sum of £1,000. At this moment he does not wish to have his name mentioned.

"I need not dwell on the importance of our Research work, as I feel sure that every person here who has himself done original work shares my opinion that when we limit our expenditure on Research, and especially on pure scientific research, we shall begin to be a bankrupt Association—bankrupt, that is, morally from the point of view of science, if not actually in the financial sense.

"The moneyed men of Great Britain are most willing to help any good object when they get proof that it really is a good object. We cannot complain of want of their help for they did not know the facts. At the same time, the treasurer of an Association with such a record as ours does not feel happy at the prospect of begging for help."

In the two days of the meeting following that on which I made this statement, the fund was raised to a total of £1,475. I intend to publish in due course a list of names of donors and donations.

To illustrate by many instances (as I might) our claims as to the importance of our researches would unduly prolong this letter, and any selection of a few examples would be unrepresentative. I will cite a single illustration: the National Physical Laboratory, the scene of researches of which the importance to the nation during the war and earlier cannot be overestimated, had its origin (if its antecedents be traced backward) in the Kew Observatory, which was maintained by the British Association from 1842 to 1872, in which period the Association spent some £12,000 on its upkeep.

I am, Sir, Your obedient servant,

JOHN PERRY.

British Association,  
Burlington House, London, W.1.

# TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, 29th February, 1912.)

The Council desires to make known to all

## UNREGISTERED TEACHERS

that

1. The full **CONDITIONS OF REGISTRATION** will come into operation at the beginning of the year 1921. Up to 31st December, 1920, teachers may be admitted to Registration on proof of **EXPERIENCE ALONE**, under conditions satisfactory to the Council. After that date proof of **ATTAINMENTS** and **PROFESSIONAL TRAINING** will be required.
2. The **OFFICIAL LIST OF REGISTERED TEACHERS** is now being revised. Entries for the Revised List will close on **WEDNESDAY, 30th JUNE, 1920.**
3. On and after the same date, **WEDNESDAY, 30th JUNE NEXT**, the uniform fee for Registration will be **TWO POUNDS** instead of **ONE GUINEA**, as at present.
4. Registered Teachers may count their teaching service prior to 1st April, 1919, as **QUALIFYING SERVICE FOR SUPERANNUATION** where the service has been accepted by the Council.

Teachers who are not Registered should complete the Form below and post it without delay to the Office of the Council.

To the **SECRETARY, TEACHERS REGISTRATION COUNCIL,**  
47, Bedford Square, LONDON, W.C. 1.

Please forward.....Form(s) of Application for Registration to

## LITERARY SECTION.

## BOOKS AND THE MAN.

## Mr. H. G. Wells as Historian.

An outstanding feature in the character of H. G. Wells is a fervent hatred of disorder. I am referring, of course, to his character as a writer. In private he may be a most untidy person, and certainly he is seldom well-groomed. His coiffure generally suggests that its owner has been tearing his hair in wild despair at the stupid pranks of his fellow-men and their reluctance either to range themselves in a chemical equation or form part of a symmetrical diagram. I have a friend who used to sit at the feet of Mr. H. G. Wells, B.Sc. (Lond.) in the days before "The Time Machine," when its author was engaged in teaching science at the University Tutorial College. My friend has forgotten much of the science, but he remembers vividly the uncanny skill which Mr. Wells displayed in making drawings with coloured chalks on a blackboard. These were neat and clear, well-proportioned, and above all, complete, a source of evident satisfaction to the draughtsman. In his novels the later Mr. H. G. Wells shows a kindred delight in deft handling of material and economy of effort. In "Tono Bungay" we can almost hear him purring with satisfaction as he describes a method of packing the bottles of his eponymous concoction.

It is no matter for surprise, therefore, that Mr. Wells, having surveyed our attempts to teach or write history, has found them wanting. To him they must seem hopelessly incomplete, lacking in proportion, in balance, in symmetry, and in everything that his scientific mind desires. He feels that there must be some kind of law underlying humanity's spasmodic progress towards perfection. He is convinced that this law is obscured or hidden from us by our patchy and incomplete handling of history. Instead of looking at the doings of mankind, we consider only the deeds of a nation. Instead of surveying even a nation's history, we confine ourselves to a set "period," or to selected persons such as monarchs or politicians. With a boldness that is entirely commendable, Mr. Wells has undertaken to prepare a comprehensive history and the first of "about twenty fortnightly parts" was issued by Messrs. Newnes on the 21st November. The work is entitled "THE OUTLINE OF HISTORY," and each part is to cost 1s. 2d. net. At the head of the introductory chapter there is quoted a passage from Friedrich Ratzel, which may be regarded as the motto of Mr. H. G. Wells, Historian. It runs: "A philosophy of the history of the human race, worthy of its name, must begin with the heavens and descend to the earth, must be charged with the conviction that all existence is one—a single conception sustained from beginning to end upon one identical law." Acting on this Mr. Wells begins with the heavens and brings the Book of Genesis up to date. We descend to an earth which is lifeless for millions of years before vegetable forms appear, to be followed in turn by animals of strange aspect and stranger names—pleiosaurs, diplodocus, brontosaurus, pterodactyl, and the rest. The drawings help to make these words more palatable, and of course Mr. Wells makes the general theme attractive by his rare skill as a writer. It is a good thing to have a survey of world history presented by a scientist who writes novels. The threefold combination of biology, history, and romance appears in a form which is certain to gain approval.

It is a good thing, too, that Mr. Wells should have undertaken a task which is so nearly related to teaching. Of late his stories have contained some shrewd criticisms of our schools and schoolmasters. We welcome his appearance as a teacher, and I venture to suggest that a proper sequel to the "Outline of History" will be the establishment of a Wells School.

SILAS BIRCH.

## REVIEWS.

## Mathematics.

PROJECTIVE VECTOR ALGEBRA: by L. Silberstein, Ph.D. (Bell. 7s. 6d. net.)

This is "an algebra of vectors independent of the axioms of congruence and of parallels." It begins with a definition of the addition (non-metrical) of vectors and shows that vectors added in this way obey the commutative and associative laws.

The definition of addition is as follows: OX, OY are two vectors with a common origin. Take points, "terminal points" on OX and OY. Join these points, giving the terminal straight. Join the terminal point of OX to Y and the terminal point of OY to X. The cross of these straight lines is A, and OA is defined as the sum of OX and OY.

It is remarkable that the algebra based on this definition covers the whole range of projective geometry. The power of this algebra may be judged from the examples of its use which are given. The proof of Pascal's Theorem, for example, is simple and elegant.

Students of projective geometry will find this an unusually attractive and enlightening book. The writer has an engaging way of introducing new ideas exactly where they are wanted and as they first occurred to him, so that the reader has the feeling that he is on a voyage of discovery with the writer as pilot.

FERMAT'S LAST THEOREM: Three proofs by elementary algebra (revised edition): by M. Cashmore. (Bell. 2s. 6d. net.)

"There is no possible general solution of the indeterminate equation  $x^n + y^n = z^n$ , where  $x, y, z$  are positive integers not equal to 0 and  $n$  is a positive integer  $> 2$ ."

The proofs are clearly expressed and not difficult to follow, even though the number of assumptions makes the solution rather like the solution of an intricate chess problem. The most interesting proof is the first, which is based on a method which the author calls the "Infinite descent" argument. It is shown that if  $x^3 + y^3 = 2^3$  can be solved in positive integers not zero, then other solutions in smaller integers exist, and so on indefinitely, i.e., there is an infinite number of small integers. Hence, the assumption is untenable.

DIFFERENTIAL CALCULUS FOR COLLEGES AND SECONDARY SCHOOLS: by Charles Davison, Sc.D. (Bell. 6s.)

There is something very attractive about this book. It may be the type, or the arrangement, or the clearness of the proofs, or all the three. At any rate it is very easy to read. It begins with the analytical definition of a derivative and develops the subject on almost purely analytical lines as a branch of pure mathematics.

Part I covers the first principles of the differential calculus—differentiation of algebraical, circular, and hyperbolic functions, successive differentiation, expansion of functions in powers of the independent variable, and the evaluation of indeterminate forms.

Part II include applications to maxima and minima, tangents and normals, curvature, asymptotes, singular points, curve-tracing, envelopes, evolutes, and pedals.

This list makes the scope of the book clear. The integral calculus and applications to mechanics and physics are not introduced.

A valuable feature in the exercises is a list of subjects for essays.

AN ARITHMETIC FOR PREPARATORY SCHOOLS: by Trevor Dennis, M.A. Second edition revised. (Bell.)

The type and arrangement are clear and attractive, and the exercises are unusually interesting and varied.

We are strongly of opinion that decimals should be introduced at the beginning, being led up to by measuring in inches and centimeters and weighing in grams. Otherwise there is considerable difficulty in removing the idea of a break at the decimal point. Here decimals are introduced after vulgar fractions.

We question also the utility of exercises like "9mi. 2 fur. multiplied by 987," which have no particular meaning. It

## The Teachers' Guild of Great Britain and Ireland

NOTICE is hereby given that the Thirty-sixth ANNUAL GENERAL MEETING of the Teachers' Guild of Great Britain and Ireland will be held at University College, Gower Street, W.C.1, on Thursday, January 1st, 1920, at 10.30 a.m., for the transaction of the following business :

1. To receive the Annual Report of the Council.
2. The election of a President.
3. The election of a Treasurer.
4. The election of eight general Members of the Council.
5. The appointment of an Auditor.

ALBERT EHRHARDT,  
General Secretary.

*At the conclusion of the Annual General Meeting, the retiring President, Canon J. H. B. Masterman, will deliver an Address.*

"A contribution to educational historical thought."—  
THE TIMES.

## The Manchester Grammar School 1515 - 1915.

A  
Regional Study of the Advancement of Learning  
in Manchester since the Reformation.

By ALFRED A. MUMFORD, M.D.

With Illustrations. 8vo.

21s. net.

"The life of a school is shown historically to be part of the great synthesis of actions and reactions of individuals from near and far, and of civic, national groups spreading out into connexions beyond the nation."—THE TIMES.

LONGMANS, GREEN & CO.,  
39, PATERNOSTER ROW, LONDON, E.C.4.

should, however, be said that Mr. Dennis approaches nearer the ideal of leaving such things out altogether than almost any writer on arithmetic. Exercises on compound multiplication might just as well follow the decimalization of money, which robs them of their terrors.

Opportunities are missed of introducing literal symbols naturally for purposes of generalisation, *e.g.*, in dealing with areas. And why not say boldly,  $a \text{ in.} \times b \text{ in.} = ab \text{ sq. in.}$ ? It has to be done some time or other; or what becomes of the theory of dimensions?

One other very small point. It is neither necessary nor in accordance with modern practice to put a point after "per cent"!

The criticisms we have made do not change the general conclusion that there is no other arithmetic book we would so gladly see used in preparatory schools.

### Classics.

THE AGAMEMNON OF AESCHYLUS: translated by R. K. Davis. (Blackwell, Oxford. 4s. 6d. net.)

THE CLOUDS OF ARISTOPHANES: translated by B. B. Rogers. (Bell and Sons. 3s. 6d. net.)

These two books—one an honourable failure, the other a brilliant success—suggest a large question. When is it possible to transpose the verbal music of one language into the verbal music of another? It is obvious that the attempt should be made, for a prose translation of a metrical composition is a crib and nothing more, and the chief conditions for success seem to be these. The translator should be himself a poet with a keen ear for beautiful sound. This first condition is so essential that it should be superfluous to require it, but as a matter of fact, many English poets of established reputation—Browning and Meredith will serve as examples—are capable of writing lines that are atrociously ugly. Greek has in any case a very great advantage over English in melody, but it is not necessary to emphasise our weakness as Mr. Davis does when he writes:—

"Again the dreadful travail-throe, the whirl,  
The dizzy spasm that brings the prophyce."

or again:—

"That thou art clean of guilt  
What witness can assure us?  
Not so, not so! Yet still

The demon grim may claim his part in the story.  
Blood upon blood new-spilt—  
Fierce Havoc tramples o'er us  
To wreak his righteous will

On kindred flesh, for feast of children gory!"

Rhyme is a very valuable ornament—about the only thing we have to redress our adverse balance against Greek—but it should be beautiful rhyme, and the assonance of "guilt-spilt," "assure us-o'er us," "story-gory" does not seem to justify the note of admiration with which Mr. Davis ends the passage.

Secondly, the translator should either possess, or be able to invent, metrical models in which to recast his verse. This is the key difficulty in attempting to reproduce Aeschylus. For his iambic dialogue we have our blank verse, with its fatal fluency, but where shall we find in English an adequate counterpart to the elaborate rhythm of his choral odes? It is only recently that we have begun to grasp the system on which Pindar and Aeschylus worked, and even Walter Headlam, who really understood their laws of composition, found it impossible to represent in English verse the ever-changing harmonies of Greek music. With Euripides the difficulty is nothing like as great, for his method of chorus writing is altogether on a simpler plane than that of Aeschylus, and it is possible by a judicious use of Swinburnian melodies to approximate at least to his effects. But Swinburne is no use for Aeschylus; Milton himself would have found all his powers taxed if he had tried to translate the Agamemnon as it should be translated.

Thirdly, the translator should be in genuine sympathy with his author and be able really to enter into the thoughts he is expressing. This is where the great advantage lies with Dr. Rogers, whose translation of the Clouds, first published in 1852, a classic now by age as well as by merit, we rejoice to welcome in a cheap edition. Every one must admire Aeschylus, unless indeed like the youth in the Clouds, not being able to understand, they deride him as—

"That rough unpolished, turgid bard, that master of bombast," but few can claim that they habitually move on his level of thought. But with Aristophanes it is different. There is a close kinship between his methods and that particular kind of

English wit which we call "legal humour," best represented on our stage by Sir William Schweick Gilbert. The style is the man and the tetrameters of Aristophanes run naturally into those long, galloping lines with their double rhymes that Dr. Rogers and Gilbert seem so to enjoy writing.

"O! men, sit you still, and attend to my will, and hearken in peace to my prayer—

O Master and King, holding earth in your swing, O measureless infinite Air."

Aristophanes, like Euripides, is a modern, and if he were alive to-day would doubtless be turning out revues. The difference between our product and a revue written by a man of genius may be seen by anyone who will first go to a London theatre and then turn to Aristophanes.

F.A.W.

HOSIDIUS GETA'S TRAGEDY MEDEA. Text with metrical translation by J. J. Mooney. (Cornish, Birmingham. 4s. 6d. net.)

Of all the forms of dead literature, centos, poems—save the mark—made up of scraps from other poems are the most mouldy. Hosidius Geta, who as early as the second century A.D. plundered the pages of Vergil to make his verse tragedy, Medea, is no worse; but he is also no better than the blameless monks who, seeking to avoid the temptations set for idle hands, achieved in this form works of truly diabolical dulness. It might seem that it was only humane to leave Geta and his tragedy in their well-earned oblivion; but Mr. Mooney does not agree, and has furnished the Latin text with a translation in blank verse, of which it is kinder not to speak.

F.A.W.

THE GREEK ORATORS: by J. F. Dobson. (Methuen. 7s. 6d. net.)

Classical students will find this a useful and instructive book. Professor Dobson disclaims any intention of rivalry with Jebb's "Attic Orators," but he manages to condense into some three hundred pages most of the material which in that monumental work fills two solid volumes. He begins with an account of early oratory and the influence of the sophists, committing himself by the way to the rather doubtful doctrine that "the teacher must indulge in exaggeration or the pupil will not grasp his points." Then follows a vivid description of two strongly contrasted types, the ultra-professional Antiphon and the mere amateur Andocides. Lysias, Isaeus, Isocrates, and Aeschines are each given a chapter, the first perhaps receiving less, the last rather more praise than is usually assigned them; and then we come to Demosthenes, whose work is rightly treated on a fuller and more generous scale. Finally we have the orators of the decadence, Lycurgus, Hyperides, and their contemporaries. Such is the main outline of Mr. Dobson's book, and his treatment is thoroughly sound and practical. The facts of each orator's life are usually given first, then a brief analysis of his more important speeches, illustrated by a number of selected passages excellently translated; lastly, a few paragraphs of judicious and sensible criticism.

The book forms an admirable guide to the learner, but it is perhaps doubtful whether even Mr. Dobson will attract the general reader to the study of Greek oratory, and his dictum that people "ought" to find interest in the subject seems somewhat arbitrary. Our politicians and barristers would certainly glean from the pages of the orators many examples, if they needed them, of the art of misleading statement, of the use and abuse of personal invective; but this is scarcely an inducement to the layman. As a matter of fact the orators exhibit rather too plainly the less pleasing side of the Greek character; they are always out to win, and are perfectly unscrupulous as to the methods they employ. In this respect they are all the same. Lysias, behind an apparent candour, hides a complete absence of veracity. Isaeus makes it his chief object to deceive the jury with a cloud of sophistical arguments and wilful perversions of fact. Demosthenes in matters of state was a high-minded patriot; as a speaker in private cases, whether for himself or for clients, he loses all sense of shame, demanding vehemently that Meidias shall be put to death for having buffeted him on the cheek, but finally accepting a handsome pecuniary atonement and making, as his rival Aeschines remarked, a fortune out of his face.

As stylists certainly, helping to shape the great instrument of Greek prose, the orators deserve study; but in the serious purpose which marks all great literature they are lamentably wanting.

## History.

**THE MAKING OF MODERN WALES: STUDIES IN THE TUDOR SETTLEMENT OF WALES,** by W. Llewellyn Williams. (Macmillan. 336 pp. 6s. net.)

Now that we have a Welsh Prime Minister, it is time that English readers should open the almost closed book of Welsh history and learn what happened after the Middle Ages. Mr. Williams has hardly begun his record before we find him praising the political virtue of Henry VIII, who initiated what may be called Welsh Home Rule, in 1535:—

Its shining success made it come to be regarded in after-times as an inspiration, and on the principles upon which Henry VIII proceeded in his pacification of Wales has been based the stately edifice of the British Empire. There is no finality in human affairs, no rest for "the ever-climbing footsteps of the world." O'Hagan, one of the poets of young Ireland, sang, seventy years ago:

There never lived a nation yet  
That rules another well.

The rhetoric of the Irish "rebel" has become the gospel of the League of Nations.

This last observation might lead us to expect a volume full of nationalist fire and emphasis, and perhaps fury. But Mr. Williams is a lawyer and scholar and lover of learned foot-notes, as well as a Welshman, and his book, while always interesting, and in some sections novel, is always grave and judicious. His central chapter on "The King's court of Great Sessions, 1542-1830" (the Courts of Great Sessions not being abolished till 1830) could only have been achieved by a legal mind. The change to the English Circuit system created friction and suspicion, which have now happily vanished. From this more technical side of Welsh life Mr. Williams passes to the subject of the decline of Catholicism, and much of his story will be new to English, and perhaps even to Welsh readers. He remarks, rather significantly, that "Catholicism stood for more than the old religion; it stood also for Welsh nationality." The country was devotedly Catholic, and, for over a hundred years after the breach with Rome, no Protestant Church was founded. Chapters on Nonconformity and the Welsh Language complete a very valuable work. Speaking of education, Mr. Williams rightly asks that "provision must be made to ensure that the education of the schools shall not quench the spirit or stifle the native culture of the Welsh people." F. J. G.

**OUR GUARDIAN FLEETS IN 1805:** by H. W. Household. (Macmillan. 226 pp. 3s. net.)

Assisted by numerous pictures and battle plans, Mr. Household relates in a vigorous and straightforward manner, and with evident carefulness of detail, the story of Nelson's valour and naval wisdom, from the escape of the French fleet from Rochefort in January, 1805, to the dramatic home-coming of Nelson and the singing of the memorial anthem at his tomb: *Let us now praise famous men, and our fathers that begat us.*

**EDINA JUNIOR HISTORIES, Book III, "The Age of Discovery, 1485-1603," and Book IV, "The Age of Strife, 1603-1713."** By A. L. Westlake and T. Franklin. (W. and A. K. Johnston. 64 pp. and 72 pp. 1s. 4d. net each.)

Concise and careful notes, set out in orderly paragraphs (e.g. English Humanists, Loyola, Armada, Thirty Years' War, The Cabal, etc.), handy for reference, and not pretending to be descriptive.

## HELPS FOR STUDENTS.

The S.P.C.K. continues to turn out useful booklets, of some 40 to 60 pp. each. A. Hamilton Thompson tells of *Parish History and Records* (8d. net), and observes, in passing, that the English parochial system came into existence long before the Norman conquest. Arthur A. Tilley compiles little note-books, not at all dull, on the *French Renaissance* (8d. net), and *The French Wars of Religion* (6d. net); in the latter pamphlet he remarks on a fact often overlooked by admirers of the Huguenots, that "the special privileges granted to the Protestants promoted the existence of a State within a State." A. P. Newton provides a compact mass of hints on the *Study of Colonial History* (6d. net). And (the late) Archdeacon Cunningham's *Study of English Economic History* (8d. net) displays the combination of interesting data, common sense, and fine moral purpose, which lend light and value to all his works. F. J. G.

**FIFTY YEARS OF EUROPE, 1870-1919:** by Charles Downer Hazen, Professor of History in Columbia University. (G. Bell and Sons. 428 pp. 14s. net.)

Large philosophical judgments on the social evolution which led up to the Great War are not yet possible. We shall have them in rich abundance, about 1950, and they will show a greater sense of economics and ethnography than the popular estimates of 1920. Meanwhile we may be thankful for narratives such as Professor Hazen's. His story is distinguished by a clearness and orderliness which avoid too much detail, and too little detail. It is, of course, written from an American standpoint. If he were telling the tale of Greece or Rome he could not exhibit a more pleasing and (for us in Europe) more instructive detachment, until, of course, he arrives at the War of 1914, and the tragic vibration of the Old World touched the heart of the New. In fifteen chapters he gives us plain and sagacious, and by no means dry, records of the Franco-Prussian War, the developments in Germany, Austria, and Italy, the British Empire, the Partition of Africa, the conflict of Russia and Japan, the Balkan Wars of 1912 and 1913. A final chapter, a hundred pages long, describes the World War to the date of the Armistice. As an example of simplicity and conciseness, take his note on French education:

The Republicans were particularly solicitous about education. As universal suffrage was the basis of the State, it was considered fundamental that the voters should be intelligent. Education was regarded as the strongest bulwark of the Republic. Several laws were passed, concerning all grades of education, but the most important were those concerning all primary schools. A law of 1881 made primary education gratuitous; one of 1882 made it compulsory between the ages of 6 and 13, and later laws made it entirely secular. No religious instruction is given in these schools. All teachers are appointed from the laity. This system of popular education is one of the great creative achievements of the Republic, and one of the most fruitful.

Of British policies and events Professor Hazen speaks sympathetically, and even when he refers to such happenings as the Boer War he yields no reasonable cause for complaint. There are 14 maps. F. J. G.

## Science.

**ADVANCED LECTURE NOTES ON LIGHT:** by J. R. Eccles, M.A. (Cambridge University Press. 7s. 6d. net.)

The subjects of the lessons are: rainbows, magnifying power, chromatic aberration, spherical aberration, wave theory of light, interference, diffraction, and polarization of light.

The notes are clearly set out on large pages, and form what is practically a text book on light, in fact they can be recommended as a text book concise but full.

A short analysis of the section on the wave theory will indicate the amount of matter included: Discovery of the velocity of light by Römer; the "aberration of light"; light as a form of energy; objections to the corpuscular theory; founders of the wave theory; properties of ether; plane and spherical waves; velocity, frequency, and wave-length; colour and frequency; Huygen's principle; rectilinear propagation; the area of a half-period element; reflection of plane waves; reflection of spherical waves at plane and spherical surfaces; refraction of plane waves— $\frac{\sin i}{\sin r} = \text{constant}$ ; refraction of a spherical wave through a lens—relation between focal length and radii of curvature of surfaces.

By the way, "ether" is spelt "aether" and "Huygens" is spelt "Huyghens" in this book. Even if one is not a simplified speller there is no need to go out of the way to add redundant letters.

## Geography.

**RESOURCES AND INDUSTRIES OF THE UNITED STATES:** by Elizabeth F. Fisher. (Ginn and Company.)

With less need of conservation of resources than ourselves, Americans seem more awake to its necessity than we are. The coal supplies of the United States are estimated to last, according to this book, about 4,000 years at the present rate of consumption. (We have seen other estimates placing the time at nearer 10,000 years.) Our own supply of coal is estimated to last less than

(Continued on page 470.)

## BELL'S MATHEMATICAL SERIES FOR SCHOOLS AND COLLEGES.

General Editor: W. P. MILNE, M.A., D.Sc., Professor of Mathematics, Leeds University, formerly Mathematics Master, Clifton College.

### STATICS. RECENT VOLUMES.

By R. C. FAWDRY, M.A., B.Sc., Head of the Military and Engineering Side, Clifton College. Crown 8vo. 5s.; or Part I, Third Edition, 3s.; Part II, 2s. 6d.

NATURE.—"This book can be confidently recommended."

### DYNAMICS.

By R. C. FAWDRY, M.A., B.Sc. Crown 8vo, 5s.; or Part I, Second Edition, 3s.; Part II, 2s. 6d.

SCHOOL WORLD.—"Mr. Fawdry has performed his task with the sure touch of one who is familiar with all the difficulties which beginners in this subject experience."

### STATICS AND DYNAMICS—FIRST PARTS.

By R. C. FAWDRY, M.A., B.Sc. Crown 8vo, 5s.

THE FIRST PARTS OF THESE TWO BOOKS HAVE BEEN ISSUED BOUND TOGETHER, IN RESPONSE TO REQUESTS RECEIVED FROM MANY TEACHERS.

### ANALYTICAL GEOMETRY OF THE STRAIGHT LINE AND CIRCLE.

By JOHN MILNE, M.A., Senior Mathematics Master of the Mackie Academy, Stonehaven. Crown 8vo, 5s.

ATHENÆUM.—"The book is plentifully illustrated and well provided with exercises."

### A FIRST COURSE IN THE CALCULUS.

By W. P. MILNE, M.A., D.Sc., Professor of Mathematics, Leeds University, and G. J. B. WESTCOTT, M.A., Head Mathematics Master, Bristol Grammar School. Second Edition. Crown 8vo, with Answers, 3s. 6d.

NATURE.—"A book of peculiarly suggestive and persuasive kind. Both authors are experienced teachers of mathematics. . . . The style is splendid."

### PLANE TRIGONOMETRY.

By H. L. REED, M.A., Assistant Mathematics and Science Master, Westminster School. 2nd Edition. Crown 8vo. 4s. 6d.

A.M.A.—"This book represents a successful attempt to write a School Trigonometry on modern lines. We have no hesitation in declaring it to be the best school book on the market. . . . There is a magnificent collection of interesting and varied examples. . . . The boy's interest is at once aroused and he is given a sense of power which reacts favourably on his other mathematical work."

### ARITHMETIC FOR PREPARATORY SCHOOLS.

By TREVOR DENNIS, M.A., Head Master of Lady Manners' School, Bakewell. Crown 8vo, 4s. net; or with Answers, 4s. 6d. net. Also issued in two parts, bound in limp cloth. Part I, 2s. 6d. Part II, 2s.

### ARITHMETIC.

By H. FREEMAN, M.A., formerly Mathematics Master at Halberdashers' Aske's School. Crown 8vo. Seventh Edition. With or without Answers, 3s. 6d.

EDUCATIONAL NEWS.—"The methods shown are the very best possible."

### ARITHMETIC.

By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A., Assistant Masters at Eton College. Part I, Second Edition, Crown 8vo, 3s. 6d. Answer to Revision Papers, 1s. net. Part II, in the press, 3s. 6d.

NATURE.—"We like the general appearance of the book: there are numerous interesting and attractive questions, those on contours and map-reading deserving special mention."

### A SHILLING ARITHMETIC.

By JOHN W. ROBERTSON, M.A., B.Sc., Mathematical Master, Robert Gordon's College, Aberdeen, and Lecturer at Aberdeen Technical College. Crown 8vo. Sixth Edition. 1s. 6d. net; or, with Answers, 2s. net.

### THE ELEMENTS OF NON-EUCLIDEAN GEOMETRY.

By D. M. Y. SOMMERVILLE, M.A., D.Sc., Professor of Mathematics, Victoria University College, Wellington, N.Z. 7s. 6d. net.

MATHEMATICAL GAZETTE.—"A very useful and stimulating book."

FULL PARTICULARS OF THIS SERIES, AND OF THE WELL-KNOWN TEXT BOOKS OF

Arithmetic, Algebra, Geometry and Trigonometry, by Messrs. PENDLEBURY, BAKER, and BOURNE, BORCHARDT and PERROTT, etc.,

WILL GLADLY BE SENT ON APPLICATION.

G. BELL & SONS, LTD.,  
YORK HOUSE, PORTUGAL ST., W.C. 2.

# FROM PITMAN'S LIST

## UP-TO-DATE READING BOOKS.

### THE WANTS OF MAN. 3/- net.

By T. W. BOWTELL, M.A., B.Sc.

A Junior Economic Reader, being a simple introduction to the problems of economic science.

The elementary, though important, truths associated with Value and Capital, Supply and Demand are copiously illustrated by facts drawn from the home, the shop, and the factory, as well as from Geography and History.

### THE TRIUMPH OF MAN. 2/- net.

With 130 illustrations. A reading book for boys and girls from 12 to 16 years old. Contains a simple account of wind, water, steam, and electricity and their applications; of iron and steel and their uses, etc.

### THE TRUE PATRIOT'S BOOK. 1/9 net.

By ORME AGNES.

The object of this book is to make children INTELLIGENTLY proud of their country and to encourage the instinct to serve it.

## FRENCH.

### THE PROGRESSIVE FRENCH GRAMMAR. 5/6 net.

By F. A. HEDGECOCK, M.A. (Officier de l'Instruction publique; Officier d'Académie, and the only English Docteur ès Lettres of the University of Paris).

In this book the author, a well-known authority on the French Language, has adopted an entirely new method, combining the direct with the indirect. Phonetic type is introduced, by which a closely approximate idea of French pronunciation is conveyed.

Also issued in Parts. Part I, 3s. 6d. net; Part II, 2s. 6d. net; Key, 3s. 6d. net.

### FRENCH FOUNDATION BOOK OF VERBS, ACCIDENCE, AND SYNTAX. 1/- net.

By THE SAME AUTHOR.

A useful book for teachers.

## ART.

### DRAWING AND DESIGN. 10/6 net.

By SAMUEL CLEGG.

A school course in Composition. Lettering and pen and ink drawing are included, and a special feature of the book is coloured plates printed by scholars from wood blocks of their own making and designing. Profusely illustrated.

### THE ART OF PAINTING IN PASTEL. 15/- net.

By J. LITTLEJOHN, R.B.A., and L. RICHMOND, R.B.A. With a front piece and foreword by Frank Brangwyn, A.R.A. With 40 full-page coloured plates and 15 other illustrations.

## ENGLISH.

### ENGLISH GRAMMAR AND COMPOSITION. 3/6 net.

By W. J. WESTON, M.A., B.Sc. (Lond.).

In this volume the theory of the language is made interesting, and is taught with effect by being brought into union with the practice of the language—GRAMMAR TAUGHT THROUGH COMPOSITION.

### ENGLISH FOR TECHNICAL STUDENTS. 2/- net.

By F. F. POTTER, M.A., B.Sc.

A most interesting and useful book, teaching how to write free and correct English, especially with reference to scientific subjects.

Send for full particulars of any of the above books which interest you. They will be sent post free, together with complete Catalogue of Educational Books.

Sir Isaac Pitman & Sons Ltd.  
1, AMEN CORNER, LONDON, E.C. 4

200 years ; so that our problem is much more urgent. Nevertheless we are not making the same endeavour to teach conservation through the schools as American educationists are making.

The book is one of many American school books which teach conservation of resources. It is intended for Junior High Schools. Beginning with a study of soils, "man's chief resource," and the best use of the soil, it passes on to human necessities in order of importance—food, clothing, and shelter. Chapters follow on forms of power, manufactured products, and "Our resources the basis of our trade relations."

In each section a distinct problem is presented, e.g., "How we may use and protect our fish," "How to conserve the fuels needed by mankind." In this connexion it is interesting to note that in the United States more trees are cut down for firewood than for lumber.

The book is valuable to English teachers partly as a geography of the United States and partly because of the lessons in elementary economics, which are as apt here as in the United States.

Many of the illustrations are of great interest. Some of them, for example a picture of some sheep in a field, might just as well have been left out.

### Economics.

**THE WANTS OF MAN:** by T. H. Bowtell, M.A., B.Sc., Econ.M. Ed. (Pitman. 2s. 6d.)

This is a very successful effort to produce a school book which should introduce to boys the fundamental facts and elementary principles of economics. It consists of short chapters, with clear and pointed illustrations and explanations of economic terms, their meaning and uses. The examples are very practical and the method is calculated to incite interest in their application. The economic principles involved are explained with lucidity and with the aid of cases of practical application.

The book should make an excellent and interesting Reader and should stimulate youths to further enquiry. It may be said that youth who mastered this little work would pass to the world of business better equipped to grasp the meaning and importance of their duties, and they would also be armed against many fallacies that arise from ignorance. The book gives evidence of sound economic knowledge. Its use in schools, and indeed by older persons unacquainted with economic works, is to be strongly recommended as an antidote to much of the wild doctrine now so mischievously spread abroad as to the origin and distribution of wealth. There is nothing controversial in the work; it is simply explanatory of facts which every man and woman would be the better for knowing.

If anything, the book is too full of detail and illustration for its task, but, if so, this is an error on the right side. It deserves a wide circulation for its sound doctrine and its potential utility in practice.

### General.

**THE BOOK OF THE LONG TRAIL:** by Henry Newbolt. With a coloured frontispiece and thirty other illustrations by Stanley L. Wood. (Longmans, 7s. 6d. net.)

In this attractive volume Sir Henry Newbolt returns from the adventures of war to those of peace and succeeds admirably in depicting the courage and hardihood of great explorers. The record includes the stories of Franklin, Livingstone, Stanley, Franklin, Captain Scott, Richard Burton, Francis Younghusband, and Alexander Wollaston. It serves as a timely reminder to young readers that peace gives opportunity for the display of splendid qualities of patience and heroism. Needless to say, the stories are excellently told, and Mr. Stanley Wood's illustrations add to the interest of the work.

**WHEN LEAVES WERE GREEN:** by Sydney Cope Morgan, with illustrations by Joan Buckmaster. (Heffer.)

A book about children, presumably by a grown-up, and certainly by one who has strange notions of English prose. What are we to make of a sentence such as "Being a self-reliant young gentleman his absence was not noticed until later in the afternoon. Mary failed to find him in the house or garden. The stable yielded no better result." (p. 48)? This sentence is one of many which baffle our powers of understanding. For relief we turn to the drawings by Mrs. Buckmaster, which are admirable.

### Pensions at 55.

Under the Superannuation Act no teacher can receive a pension before the age of 60, although very many will complete the minimum period of qualifying service at an earlier age. Of these, many will feel a desire to leave off teaching, but their difficulty will be to bridge the gap between giving up their salary and beginning to draw a pension. The Friends' Provident Institution, with which is now allied the Century Insurance Company, has devised an attractive scheme for providing a deferred annuity payable between the ages of 55 and 60. Quotations for other ages may be obtained, but for those mentioned an annual premium of about £8, beginning at 24 years of age, will secure at 55 an annuity of £100 for five years. In the event of death before 55 all premiums are returned with interest at 2½ per cent. per year compound. Should the policy be discontinued before 55 a similar refund is made provided that the policy has been in force two years, or alternatively, a paid-up policy may be taken. There is thus no loss of premiums in any case, and to many teachers the plan will prove attractive as a means of securing the chance of optional retirement before the pensionable age. The Friends' Provident Institution has also prepared for independent schools a scheme of pensions which is in several respects better than the Government scheme, although it is of course contributory.

### Eurhythmics—Vacation Classes.

The London School of Dalcroze Eurhythmics will hold Christmas Vacation Classes from Dec. 29th, 1919, to Jan. 8th, 1920. The classes are intended as an introduction to the Dalcroze Method, and include instruction in Rhythmic Movement, Practical Harmony, and Solfège. Teachers and others will find in this short course an opportunity for learning at first hand something of the purpose and possibilities of Eurhythmics. The course will be under the direction of Miss Marthe Bischoff, and particulars may be obtained from the School, 23, Store Street, London, W.C.1.

At Liverpool a somewhat similar course is to be carried on between the same dates, under the direction of Miss Elsy Findlay, and for this particulars may be obtained from Miss L. Gibson, Brookside, Maiden Lane, Clubsmoor, Liverpool.

## OUR TRANSLATION PRIZE.

We offer a First Prize of Ten Shillings and a Second Prize of Five Shillings for the best translation into English, with explanatory notes, of the following letter, which we take from the *Westminster Gazette* :—

"Dear Old Thing,

Sorry not to have seen you last Saturday, but I had a little stunt on at Hornsey—absolutely a pukka do, umpteen girls and no end of doings. Dear old Ponko (who was with me in Egypt) blew in later. We jazzed till 4 ack emma, and then kipped on the floor.

Hope you are in the pink, old Bean, and not feeling too much of an onion at home! Did you click for a rise? The gadget is to barge in on the Chief right away—at the double in fact. Cold feet are no good for bringing in the dough. If the Chief is inclined to jib, tell him to put a sock in it! These old buffers cut no ice with me, and you can put your buttons on Percy that he won't get wind up. I've been sweating on the top line for a big push up the scale for three months now and am fed up to the back teeth. Shall grease off and have a dekkoo abroad if chances are napoo. There are some bonza jobs out east I hear. London is getting me down a bit and I feel like cutting it all out. Take it from me I shan't be fooling round this old town much longer.

Don't forget Tuesday, any old how. Can you scrounge any doings? It's up to you. See you 7 pip emma at the Troc. Mean to knock off two bottles of the best. Expect I shall get a raspberry from the old Oojah if I arrive (with the milk) blotto. Never mind, I've not had a buckshee binge for years!

By the way, Tuesday is not a posh affair—trust me not to swing anything like that on you. Now do blow along, old Bean, or I shall turn you down as a wash-out. Ponko is coming and means to push the boat out, so don't give it a miss. Chin-chin.—  
Thine, PERCY.

P. H. M.

Attempts should reach the Editor, Translation Prize, *The Educational Times*, 31, Museum Street, London, W.C.1., not later than Saturday, 13th December, 1919. The Editor reserves the right to publish any translation received.

# The "Tutorial" System of Correspondence Tuition makes a success of every willing student.

The "Tutorial" Correspondence Courses are based upon the best educational experience and compiled from unequalled sources of information and specialised knowledge. The work of the correspondence student is closely scrutinised, minutely checked, criticised and appraised by a tutor interested in producing the best individual results and alive to the closest co-operation necessary between himself and the student.

ALL "Tutorial" Tutors have been directly connected with University work for a number of years. Under their guidance, industrious candidates have a surer guarantee of success than any other training system or institution can afford. Being individual coaching from start to finish, the Tutorial Correspondence Tuition is incomparably efficient.

Special provision is made for coaching candidates for all examinations connected with the Teaching profession. Particular attention is devoted to special subjects if necessary, so that backward students may quickly recover lost ground.

The Tutorial College Correspondence Tuition affords complete Training in Arts, Science, Medicine, Economics, Laws, etc., preparatory for University and Professional Examinations, as well as for the Indian and Home Civil Service Examinations.

*Call or send to-day for Prospectus and Table of Fees.*

ROBERT W. HOLLAND,  
O.B.E., M.A., M.Sc., LL.D.

By Special

Appointment.

To their Majesties the King and Queen and H.M. Queen Alexandra,

## WINSOR & NEWTON,

**Prepared Water Colours**

IN

WHOLE and HALF CAKES, WHOLE, HALF, and  
QUARTER PANS,

and WHOLE, HALF, and LARGE TUBES.

Quarter Pans of Winsor and Newton's Artists' Water Colours are of the same outside dimensions as the Half Pans. They may, therefore, be used in Winsor and Newton's range of Half Pan Japanned Boxes.

The advantages of habituating the Student at the outset of his career to the use of the BEST materials are so obvious that no attention need be drawn to them.

Messrs. Winsor and Newton's Artists' Water Colours are necessarily more expensive than those usually manufactured for School use, but as, owing to their superior strength, a small quantity yields approximately the same amount of colour surface as the larger pans of Water Colours generally sold for Students' use, the expense in both cases is much the same.

The special attention of Teachers and the public is, therefore, invited to these Quarter Pans of Colour, which, costing practically the same, provide the Student with a superior article.

Full detailed catalogue may be obtained from any of the leading Artists' Colourmen throughout the Country, or from 39, Rathbone Place, London, W. 1.

Established nearly a Century.

Capt. C. S. Goldingham, whose new novel "Fetters," is nearly ready, with Messrs. George Allen and Unwin, has just gone to the Baltic as interpreter to the Mission under Admiral Sheppard, commanding Frensburg Force, during the taking of the Referendum in Schleswig-Holstein. "Fetters" is a very powerful story in the genre of A. E. W. Mason and the late Seton Merriman.

"Evoe" is a familiar and welcome signature to readers of "Punch," and stands for E. V. Knox. Some of his wittiest efforts in prose and verse have been collected together in book form and called "A Little Loot," and Messrs. Allen and Unwin will publish them in time for Christmas. Capt. Knox is one of the brilliant sons of the Bishop of Manchester.

Messrs. George Allen and Unwin also announce the publication of "French Fireside Poetry" translated with the preface by the late Miss Betham Edwardes; "Paths of Glory" a collection of poems written during the war by, among others, Walter de la Mare, Roger Fry, W. W. Gibson, Siegfried Sassoon, Alex Waugh, and Richard Aldington; and "The Advance of English Poetry in the 20th Century," by Professor W. L. Phelps, of Yale University, in which the work of the most notable English and American modern poets, including Thomas Hardy, Kipling, Robert Bridges, Masfield, Rupert Brooke, de la Mare, John Drinkwater, D. H. Lawrence, and W. H. Davies is discussed.

The announcements of the same publishers include "The Children's Life of the Bee" by Maurice Maeterlinck, selected and arranged by Alfred Sutro and H. Williams, and illustrated in colour by H. Detmold; "Shasta of the Wolves," a jungle book by Olaf Baker, illustrated in colour by Charles Livingstone Bull; and a novel by Miss Evelyn Sharp, the first she has written for 12 years, called "Somewhere in Christendom"; "The Remaking of a Mind" by Henri de Man, revealing the change wrought by the war in the ideas and ideals of the author, who is a prominent young Belgian Labour Leader as well as a lieutenant in the Belgian Army; a Memoir, "Joseph Fels, his life work" by Mary Fels; "The Voice of Lincoln" by Judge Wanamaker, and "The More Fatal Opulence of Bishops" by the Rev. Hubert Handley, forming sequel to "The Fatal Opulence of Bishops" by the same author, published eighteen years ago.

## An Urgent Appeal.

THE SECONDARY SCHOOL TEACHERS' WAR RELIEF FUND.  
(Registered under the War Charities Act, 1916.)

Sir,—The Committee of Management of the Secondary School Teachers' War Relief Fund desires to make a final appeal for funds with a view to closing the subscription list in December next. While expressing our sincere thanks for the support so generously accorded in the past, we have to point out that the response to the appeal made in May last has not fully met the existing liabilities of the fund. Actuarial investigation has shown that if our annual commitment based on life expectations on annuity principle is to be maintained, a further capital sum of £500 must be provided. The Committee feels that all subscribers will realise the obligation laid upon it of continuing allowances to the families of those of the profession who have fallen in the war, so that a reasonable livelihood is assured. It, therefore, urgently appeals to all interested in Secondary Education to assist to the utmost of their power in raising this sum before December 31st next. Subscriptions and donations may be sent to any of the Associations represented on the Committee of Management, or to any of the local honorary collectors appointed by the fifty branches of the Incorporated Association of Assistant Masters. When this is not possible, contributions should be sent to the Hon. Treasurer of the fund, Mr. J. Hart-Smith, c/o Barclay's Bank, Ltd., 835, Wandsworth Road, S.W. 8, London. Cheques should be made payable to the Secondary School Teachers' War Relief Fund, and crossed "A/c Payee only."

A. A. SOMERVILLE, M.A.,  
Eton College, *Chairman*.

G. D. DUNKERLEY, B.Sc., *Hon. Secretary*.  
(formerly Watford Grammar School).

J. HART-SMITH, A.R.C.S.,  
The County Secondary School,  
Battersea, S.W. 11, *Hon. Treasurer*.

35, John Street,  
London, W.C. 1.

### THE Incorporated London Academy of Music.

#### Dr. Yorke Trotter's Training Course for Teachers.

The Course includes:—

Rhythmic Method in all its branches, Musicianship, Harmony,  
Ear-training, etc.  
Piano Technique.  
Class Management and Preparation of Lessons.  
Voice Production and teaching of Class Singing.

The New Term begins on January 19th, 1920.

—Teacher's Holiday Course, Jan. 6th-10th, 1920.—  
Full particulars as to the Course, Fees, etc., can be had from  
the Secretary, 22, Princes Street, Cavendish Square, W.1.

"Dr. Yorke Trotter, having brought the mental realm and psychology into his Rhythmic Method of Music, has, in the widest sense of the word, made it religion—the worship of the good, which in the Greek is synonymous with the beautiful."
